

CONTENTS

Introduction	1
Chapter I	
The roots of experimental science from Ancient Greece to the Renaissance	7
1. Scientific rationality in Ancient Greece	7
1.1. From THALES to SOCRATES towards a new conception of Nature	8
1.2. Emergence of the principles of logic in philosophy and of rationality in the sciences	16
1.3. The Alexandrine period of greek science.....	23
1.4. The post-hellenistic period - Hiatus or transition with the Middle Ages? ...	28
2. The philosophical and technological heritage of the Middle Ages	31
2.1. The politico-economic context of the Middle Ages	31
2.2. Philosophical-theological controversies in the 12 th and 13 th centuries, a critical look back over the Ancient World	34
2.3. Alchemy and the technological revolution of the Middle Ages.....	39
3. Conclusion - At the dawn of the scientific method	45
Chapter II	
The birth of the experimental method in the 17th and 18th centuries	49
1. The discovery of the circulation of the blood by W. HARVEY	50
2. How were the movements of the heart and the blood explained before HARVEY?	58
3. The first, faltering steps of experimental science applied to living beings.....	63
3.1. From human anatomy to comparative anatomy systematics.....	63
3.2. From microscopic tissular anatomy to the morphological description of animalcules	68
3.3. The birth of physiology: seeking the experimental method	73
3.4. First conceptual controversies concerning the use of the experimental method in living beings.....	82
3.4.1. Refuting the theory of spontaneous generation	82
3.4.2. The enigma of the regeneration of the hydra.....	84
3.4.3. Refuting the idea of the pneuma as the agent of muscle contraction Birth of the idea of the reflex	86
4. The experimental method and its impact on the physical sciences in the 17 th century	88
4.1. A new theory of the cosmos.....	89

4.2. A new theory of movement	91
4.3. Proof of the existence of the vacuum	93
4.4. Towards other revelations concerning the inanimate world	97
5. Opening up chemistry to quantitative experimentation in the 18 th century.....	100
5.1. The birth of pneumatic chemistry and the study of the exchange of gases in living beings.....	102
5.2. Gaseous exchanges in living beings.....	103
5.3. Measurement of animal heat and the birth of bioenergetics	111
6. Experimental science as seen by the philosophers of the 17 th and 18 th centuries.....	112
6.1. Francis BACON and induction in scientific reasoning	113
6.2. Robert BOYLE and requirements of experimental practice	116
6.3. René DESCARTES and the cardinal principles of scientific research.....	118
6.4. Contradictory currents in the philosophy of the sciences in the 18 th century	120
7. Is there an explanatory logic for the birth of the experimental method?.....	124
7.1. Sociopolitical crises.....	124
7.2. A knowledgeable society.....	127
7.3. A scientific quorum	129
7.4. Instrumentation, an integral part of the experimental method	131
7.5. The enigma of the discovery of the experimental method and of its development in the West	132
8. Conclusion - The marriage of techniques and ideas.....	134

Chapter III

The impact of determinism in the life sciences of the 19th and 20th centuries ..	139
1. The recognition of physiology as an experimental science in the 19 th century	144
2. Determinism, the philosophical foundation stone of experimental physiology	146
2.1. Claude BERNARD's determinist bible	148
2.2. The many conceptual approaches of experimental determinism in the study of living beings.....	149
2.2.1. The experiment to see what happens	150
2.2.2. The decisive experiment.....	153
2.2.3. Serendipity and the unexpected discovery	155
2.2.4. Advantages and traps involved in reasoning by analogy	157
2.2.5. The part played by luck in the experimental method.....	161
3. The impact of technology on the life sciences in the 19 th century	164
3.1. Rationalization of operational physiology.....	164
3.2. The emergence of instrumental engineering adapted to physiological experimentation	169
3.3. Application of analytical chemistry to physiological exploration	179

4. New disciplines in the life sciences in the 19 th century and their methodological support	180
5. The idea of quantification in the life sciences.....	186
6. A new experimental order for the life sciences in the 20 th century	188
6.1. A reasoned choice of model organisms.....	189
6.2. A breakthrough in techniques for exploring the functions of living beings	200
6.2.1. Imagery of the infinitely small	200
6.2.2. Enumerating and isolating macromolecular structures	209
6.2.3. Isotopic labeling.....	215
6.2.4. The instrument and the method The analysis of reality <i>via</i> the instrument	216
7. Opening up biological experimentation to reductionism	219
7.1. The firsts steps in experimental reductionism: from the organ to the cell..	219
7.2. A cellular glycolysis: a prototype for a reductionist approach to exploring the metabolism.....	221
7.3. Deconstruction and reconstruction of macromolecular complexes.....	222
7.4. The birth of virtual biology - Modeling cell dynamics	225
8. The experimental method faced with contemporary trends in philosophy and in social life	229
8.1. Confrontation between vitalists and mechanists. the emergence of organicism.....	229
8.2. <i>Novum Organum</i> revisited and contested	233
8.3. Re-examining the process of the experimental procedure	235
9. Conclusion - Determinism and the expansion of the experimental method From the organ to the molecule	238

Chapter IV

Challenges for experimentation on living beings

at the dawn of the 21st century	241
1. The accession of biotechnology Towards a new paradigm for the experimental method.....	242
1.1. The genome explored.....	243
1.1.1. From molecular biology to genetic engineering	243
1.1.2. DNA becomes a molecular tool.....	249
1.1.3. DNA chips and protein chips - From genomics to proteomics.....	253
1.1.4. From genomics to metagenomics	258
1.2. The manipulated genome.....	259
1.2.1. DNA used as a construction material	259
1.2.2. RNA interference: a new frontier in the manipulation of the expression of the genome.....	262
1.2.3. The experimental transgression of the genetic code	264
2. Towards a mastery of the functions of living beings for utilitarian purposes..	265

2.1. Manipulations of plant DNA	
The challenge of genetically modified plants.....	266
2.2. Manipulations of human DNA and hopes for gene therapy.....	270
2.3. Stem cells and cloning.....	272
2.3.1. The hope of stem cells.....	272
2.3.2. The specter of cloning.....	277
2.3.3. The bias of parthenogenesis in cloning.....	280
2.4. The “humanization” of animal cells for purposes of xenotransplantation	281
3. The progress of medicine face to face with the experimental method.....	283
3.1. From empirical medicine to experimental medicine.....	284
3.2. Contemporary advances in biotechnology	
The example of medical imaging.....	290
3.3. From experimental medicine to predictive medicine.....	293
3.4. The drug library of the future.....	295
4. Towards a global understanding of the functions of living beings.....	298
4.1. Experimental demonstration of protein interactions.....	298
4.2. Mathematical modeling of the complexity of living beings.....	304
4.3. Biorobots and hybrid robots.....	312
5. The design and meaning of words in the experimental process.....	320
6. The experimental method, understanding of living beings and society.....	324
6.1. Human cloning censured by codes of bioethics.....	326
6.2. The patentability of living beings.....	329
6.3. Animal experimentation versus the fight for animal rights.....	331
7. The place of the scientific researcher in the changing role of biotechnology....	332
7.1. Fundamental research faced with the metamorphosis	
in the experimental method.....	333
7.1.1. A new strategy in the organization of research.....	334
7.1.2. A new way of circulating knowledge.....	336
7.1.3. A new horizon for cross-disciplinarity.....	338
7.2. The experimental method taught and discussed.....	340
8. Conclusion Looking at the present in the light of the past.....	343
Chapter V	
Epilogue	347
Bibliography	353
Index of personal names	371
Index of subjects	381
List of illustrations	395
Glossary	401

Discovering Life, Manufacturing Life

How the experimental method shaped life sciences

Vignais, P.V.; Vignais, P.M.

2010, X, 418 p., Hardcover

ISBN: 978-90-481-3766-4
