

Contents

1	Introduction to Group Analysis of Differential Equations	1
1.1	One-Parameter Groups	1
1.1.1	Definition of a Transformation Group	1
1.1.2	Generator of a One-Parameter Group	2
1.1.3	Construction of a Group with a Given Generator	3
1.1.4	Introduction of Canonical Variables	5
1.1.5	Invariants (Invariant Functions)	5
1.1.6	Invariant Equations (Manifolds)	7
1.1.7	Representation of Regular Invariant Manifolds via Invariants	9
1.2	Symmetries and Integration of Ordinary Differential Equations . .	10
1.2.1	The Frame of Differential Equations	10
1.2.2	Prolongation of Group Transformations and Their Generators	12
1.2.3	Group Admitted by Differential Equations	13
1.2.4	Determining Equation for Infinitesimal Symmetries . . .	14
1.2.5	An Example on Calculation of Symmetries	14
1.2.6	Lie Algebras. Specific Property of Determining Equations	16
1.2.7	Integration of First-Order Equations: Lie's Integrating Factor	17
1.2.8	Integration of First-Order Equations: Method of Canonical Variables	18
1.2.9	Standard Forms of Two-Dimensional Lie Algebras	21
1.2.10	Lie's Method of Integration for Second-Order Equations .	22
1.3	Symmetries and Invariant Solutions of Partial Differential Equations	24
1.3.1	Discussion of Symmetries for Evolution Equations	24
1.3.2	Calculation of Symmetries for Burgers' Equation	27
1.3.3	Invariant Solutions and Their Calculation	29
1.3.4	Group Transformations of Solutions	30
1.3.5	Optimal Systems of Subalgebras	31
1.3.6	All Invariant Solutions of the Burgers Equation	36

1.4	General Definitions of Symmetry Groups	38
1.4.1	Differential Variables and Function	38
1.4.2	Frame and Extended Frame	39
1.4.3	Definition Using Solutions	40
1.4.4	Definition Using the Frame	40
1.4.5	Definition Using the Extended Frame	41
1.5	Lie–Bäcklund Transformation Groups	42
1.5.1	Lie–Bäcklund Operators	42
1.5.2	Integration of Lie–Bäcklund Equations	45
1.5.3	Lie–Bäcklund Symmetries	48
1.6	Approximate Transformation Groups	49
1.6.1	Approximate Transformations and Generators	50
1.6.2	Approximate Lie Equations	52
1.6.3	Approximate Symmetries	53
	References	54
2	Introduction to Group Analysis and Invariant Solutions of Integro-Differential Equations	57
2.1	Integro-Differential Equations in Mathematics and in Applications	57
2.2	Survey of Various Approaches or Finding Invariant Solutions	58
2.2.1	Methods Using a Presentation of a Solution or an Admitted Lie Group	59
2.2.2	Methods of Moments	73
2.2.3	Methods Using a Transition to Equivalent Differential Equations	78
2.3	A Regular Method for Calculating Symmetries of Equations with Nonlocal Operators	89
2.3.1	Admitted Lie Group of Partial Differential Equations	90
2.3.2	The Approach for Equations with Nonlocal Operators	92
2.4	Illustrative Examples	94
2.4.1	The Fourier-Image of the Spatially Homogeneous Isotropic Boltzmann Equation	95
2.4.2	Equations of One-Dimensional Viscoelastic Continuum Motion	102
	References	108
3	The Boltzmann Kinetic Equation and Various Models	113
3.1	Studies of Invariant Solutions of the Boltzmann Equation	113
3.2	Introduction to the Boltzmann Equation	114
3.3	Group Analysis of the Full Boltzmann Equation	116
3.3.1	Admitted Lie Algebras	116
3.3.2	Isomorphism of Algebras	121
3.3.3	Invariant Solutions of the Full Boltzmann Equation	123
3.3.4	Classification of Invariant Solutions of the Fourier Transformation of the Full Boltzmann Equation	126

3.4	Complete Group Analysis of Some Kinetic Equations	127
3.4.1	The Boltzmann Kinetic Equation with an Approximate Asymptotic Collision Integral	128
3.4.2	The Smolukhovsky Kinetic Equation	130
3.4.3	A System of the Space Homogeneous Boltzmann Kinetic Equations	131
3.4.4	Homogeneous Relaxation of a Binary Model Gas	139
	References	142
4	Plasma Kinetic Theory: Vlasov–Maxwell and Related Equations . .	145
4.1	Mathematical Model	145
4.2	Definition and Infinitesimal Test	148
4.2.1	Definition of Symmetry Group	149
4.2.2	Variational Derivative for Functionals	149
4.2.3	Infinitesimal Criterion	150
4.2.4	Prolongation on Nonlocal Variables	151
4.3	Symmetry of Plasma Kinetic Equations in One-Dimensional Approximation	152
4.3.1	Non-relativistic Electron Gas	152
4.3.2	Relativistic Electron Gas	160
4.3.3	Collisionless Non-relativistic Electron–Ion Plasma	161
4.3.4	Collisionless Relativistic Electron–Ion Plasma	162
4.3.5	Non-relativistic Electron Plasma Kinetics with a Moving and Stationary Ion Background	164
4.3.6	Relativistic Electron Plasma Kinetics with a Moving Ion Background	165
4.3.7	Non-relativistic Electron–Ion Plasma in Quasi-neutral Approximation	166
4.4	Group Analysis of Three Dimensional Collisionless Plasma Kinetic Equations	168
4.4.1	Relativistic Electron Gas Kinetics	168
4.4.2	Relativistic Electron–Ion Plasma Kinetic Equations	170
4.5	Symmetry of Vlasov–Maxwell Equations in Lagrangian Variables .	172
4.6	Vlasov-Type Equations: Symmetries of the Benney Equations . . .	175
4.6.1	Different Forms of the Benney Equations	175
4.6.2	Lie Subgroup and Lie–Bäcklund Group: Statement of the Problem	176
4.6.3	Incompleteness of the Point Group: Statement of the Problem	177
4.6.4	Determining Equations and Their Solution	178
4.6.5	Discussion of the Solution of the Determining Equations .	180
4.6.6	Illustrative Example for Matrix Elements	181
4.7	Symmetries in Application to Plasma Kinetic Theory. Renormalization Group Symmetries for Boundary Value Problems and Solution Functionals	184

4.7.1	Introduction to Renormgroup Symmetries	185
4.7.2	RG Symmetry: An Idea of Construction and Its Simple Realization	186
4.7.3	Renormgroup Algorithm	190
4.7.4	Examples of RG Symmetries in Plasma Theory	193
	References	206
5	Symmetries of Stochastic Differential Equations	209
5.1	Stochastic Integration of Processes	210
5.1.1	Stochastic Processes	210
5.1.2	The Itô Integral	211
5.1.3	The Itô Formula	213
5.1.4	Time Change in Stochastic Integrals	214
5.2	Stochastic ODEs	215
5.2.1	Itô Stochastic Differential Equations	215
5.2.2	Stratonovich Stochastic Differential Equations	216
5.2.3	Kolmogorov Equations	217
5.3	Linearization of First-Order SODE	218
5.3.1	Weak Linearization Problem	219
5.3.2	Strong Linearization of First-Order SODE	220
5.4	Linearization of Second-Order SODE	225
5.4.1	Linearization Conditions	225
5.5	Transformations of Autonomous SODEs	226
5.5.1	Admitted Transformations	226
5.5.2	Autonomous Systems of Stochastic First-Order ODEs	231
5.6	Transformations of Stochastic ODEs	233
5.6.1	Short Historical Review	233
5.6.2	Admitted Lie Group and Determining Equations	235
5.7	Symmetries of Stochastic ODEs	239
5.7.1	Determining Equations	240
5.7.2	Admitted Lie Group of Geometric Brownian Motion	241
5.8	Lie Groups of Transformations of Some Stochastic ODEs	244
5.8.1	Geometric Brownian Motion	244
5.8.2	Narrow-Sense Linear System	245
5.8.3	Black and Scholes Market	247
5.8.4	Nonlinear Itô System	248
	References	249
6	Delay Differential Equations	251
6.1	Delay Differential Equations in Mathematical Modeling	251
6.2	Mathematical Background of Delay Ordinary Differential Equations	252
6.2.1	Definitions and Theorems	253
6.3	Definition of Symmetries of DDEs	255
6.3.1	Example	255

6.3.2	Admitted Lie Group of DODE	255
6.3.3	Symmetries of a Model Equation	257
6.3.4	Differential-Difference Equations	258
6.4	Group Classification of Second-Order DODEs	259
6.4.1	Introduction into the Problem	259
6.4.2	Determining Equations	260
6.4.3	Properties of Admitted Generators	261
6.4.4	Strategy for Obtaining a Complete Classification of DODEs	264
6.4.5	Illustrative Examples	264
6.4.6	List of Invariant DODEs	270
6.5	Equivalence Lie Group for DDE	271
6.5.1	Lie–Bäcklund Representation of Determining Equations for the Equivalence Lie Group of PDEs	271
6.5.2	Potential Equivalence Lie Group of Delay Differential Equations	274
6.6	The Reaction–Diffusion Equation with a Delay	274
6.6.1	The Cauchy Problem	275
6.6.2	The Equivalence Lie Group	275
6.6.3	Admitted Lie Group of Equation	277
6.6.4	Case $\Delta \neq 0$	279
6.6.5	Case $\Delta = 0$	283
6.6.6	Summary of the Group Classification	288
6.6.7	Invariant Solutions	289
