

Contents

1	Introduction	1
1.1	Environmental Processes	11
1.2	Environmental Modeling Concepts	17
1.3	Environmental Toxicology	21
1.4	Exposure Analysis	23
1.5	Environmental Risk Analysis	24
1.6	Environmental Epidemiology	28
1.7	The ACTS and RISK Software	28
1.8	Outline	33
	References	34
2	Principles of Environmental Modeling	37
2.1	Modeling Principles	40
2.2	Model Building and Model Types	41
2.3	Model Calibration, Validation, Verification and Sensitivity Analysis	45
2.4	Model Scales, Error and Uncertainty	50
2.5	Methods of Solution	58
2.6	Modeling Terminology	59
	References	59
3	Conservation Principles, and Environmental Transformation and Transport	63
3.1	Transport Principles	67
3.2	Conservation Principles	73
3.3	Sources and Sinks	80
3.4	Reactions	82
3.5	Boundary and Initial Conditions	91
3.6	Multi-pathway and Inter-pathway Mass Transport	93
	References	93

4	Air Pathway Analysis	95
4.1	Lapse Rate and Atmospheric Stability	98
4.2	Principles of Atmospheric Stability	100
4.3	Air Pathway Models	107
4.4	Air Emission Models	112
4.4.1	Farmer's Model	113
4.4.2	Thibodeaux–Hwang Model	117
4.4.3	Cowherd Particulate Emission Model	120
4.4.4	Jury Unsaturated Zone Emission Model	124
4.4.5	Landfill Gas Emissions Model	127
4.4.6	Volatilization from Water Bodies	130
4.4.7	Air Dispersion Models	134
4.4.8	Box Air Dispersion Model	136
4.4.9	Gaussian Air Dispersion Models	138
4.4.10	Air Dispersion Model Assumptions and Limitations	148
4.4.11	Indoor Air Dispersion Models	149
4.4.12	Vapor Concentration at the Contamination Source	152
4.4.13	Diffusion Through the Capillary Zone	154
4.4.14	Diffusion Through the Unsaturated Zone	155
4.4.15	Building Ventilation Rate and Volumetric Flow Rate	156
4.4.16	Soil Contamination with a Residual Phase	157
4.4.17	Parameter Uncertainty Analysis	159
4.5	“Chemicals” Database	162
4.6	Applications	163
	References	184
5	Groundwater Pathway Analysis	187
5.1	Definitions and Governing Principles	188
5.2	Groundwater Pathway Models	198
5.3	Saturated Constant Dispersion Coefficient Contaminant Transport Models	202
5.3.1	One-Dimensional Contaminant Transport Models with Constant Dispersion Coefficient	202
5.3.2	Two-Dimensional Contaminant Transport Models with Constant Dispersion Coefficient	210
5.3.3	Three-Dimensional Contaminant Transport Models with Constant Dispersion Coefficient	218
5.4	Multi-species Biodegradation By-Product Models	225
5.5	Saturated Variable Dispersion Coefficient Groundwater Pathway Models	231
5.5.1	Mathematical Models for Variable Dispersion Coefficients	232
5.5.2	Solution for Instantaneous Point Injection of a Contaminant into an Initially Uncontaminated Aquifer	236
5.5.3	Solution for a Continuous Point Source in an Initially Uncontaminated Aquifer	238
5.5.4	Initial point Concentration Distribution in an Aquifer Without Injection	240

5.5.5	Line Initial Concentration Distribution Without Injection	241
5.5.6	Analytical Solutions for an Instantaneous Line Injection into an Initially Uncontaminated Aquifer	243
5.5.7	Analytical Solutions for Continuous Line Source for an Initially Uncontaminated Aquifer	244
5.5.8	Numerical Examples for Variable Dispersion Coefficient Models	246
5.6	Unsaturated Groundwater Pathway Models	254
5.6.1	Marino Model	254
5.6.2	Jury Model	257
5.7	Applications	259
	References	273
6	Surface Water Pathway Analysis	275
6.1	Definitions and Governing Principles	278
6.1.1	Uniform Flow in Open Channels	280
6.1.2	Mixing Models in Open Channels	283
6.1.3	Elementary Transport Models in the Aquatic Pathway	286
6.1.4	Elementary Transport Models for Small Lakes and Impoundments	290
6.2	Surface Water Pathway Models	291
6.3	Near Field Mixing Models	295
6.3.1	Surface-Point Discharges	297
6.3.2	Submerged-Point Discharges	300
6.3.3	Submerged Multiport Diffusers	304
6.4	Far Field Mixing Models	307
6.4.1	Mixing in Rivers	308
6.4.2	Estuaries	313
6.4.3	Small Lakes and Reservoirs	314
6.4.4	Oceans and Great Lakes	314
6.5	Surface Water Sediments	316
6.5.1	River Bed Sediments	317
6.5.2	Estuary Sediments	320
6.5.3	Coastal Waters and Ocean Sediments	322
6.5.4	Lake Sediments	322
6.6	Applications	324
	References	330
7	Uncertainty and Variability Analysis	333
7.1	Probability Theory and Probability Distribution Functions	337
7.2	Probability Density Functions	341
7.3	Monte Carlo Analysis	348
7.4	Interpretation of the Results of the Monte Carlo Analysis	349
7.5	When an Uncertainty Analysis Will be Useful and Necessary	352
	References	354

8 Health Risk Analysis	357
8.1 USEPA Guidelines on Baseline Health Risk Assessment	358
8.2 Exposure Intake Models	364
8.2.1 Intake Model for Ingestion of Drinking Water	366
8.2.2 Intake Model for Ingestion while Swimming	366
8.2.3 Intake Model for Dermal Intake	367
8.2.4 Intake Model for Intake Via Soil, Sediment or Dust	368
8.2.5 Intake Model for Dermal Absorption of Soil, Sediment and Dust	368
8.2.6 Intake Model for Air Intakes	368
8.2.7 Intake Model for Ingestion of Fish and Shellfish	369
8.2.8 Intake Model for Ingestion of Vegetables and other Produce	369
8.2.9 Intake Model for Ingestion of Meat, Eggs and Dairy Products	369
8.3 Applications	369
References	376
9 Application: Pesticide Transport in Shallow Groundwater and Environmental Risk Assessment	379
9.1 Problem Description	380
9.2 Background on Site and Contamination Conditions	381
9.2.1 Health and Regulatory Considerations	381
9.2.2 Site Geology and Hydrogeology	385
9.2.3 Chemical and Contaminant Properties of BHC	385
9.3 Method of Analysis	386
9.3.1 Modeling Approach and Assumptions	386
9.3.2 Model Input Parameters and Source Definition for Deterministic Simulations	387
9.3.3 Model Input Parameters for Probabilistic Simulations	392
9.4 Modeling Results	394
9.4.1 Deterministic Model Simulations	395
9.4.2 Probabilistic Model Simulations	396
9.5 Discussion of Results and Conclusions	401
9.6 Limitations	403
9.7 Practical Applications	404
