

Contents

1	Introduction	1
1.1	Oil Depletion	1
1.2	Global Warming	6
1.3	Preparations for the Impending Out-of-Oil Crisis	10
1.4	Ways and Risks to Overcome the Pending No-Oil Crisis	12
1.4.1	Risks in the Nuclear Millennia Option	15
1.4.2	Risks of the Renewables-Only Option	23
1.4.3	The Coal-Burning Option	25
1.4.4	The Do-Nothing Option	27
1.5	Organization of the Book	30
2	Nuclear Fables and Facts	33
2.1	Fable (1): “Nuclear Reactors are Like Nuclear Bombs”	33
2.2	Fable (2): “We Don’t Need More Nuclear Power; There Is Plenty of Natural Gas, Oil, and Coal”	34
2.3	Fable (3): “Nuclear Power Plants Create Lots of “Dangerous” Radioactive Waste, Which We Don’t Know How to Transport or Store Safely. Coal-Fired Power Plants Are Much More Bio-Friendly”	35
2.4	Fable (4): “Nuclear Power Is Not Needed. “Free” Renewable Solar, Wind, Hydro, and Geothermal Power Will Do. The Utilities and Government Should Invest More in Them”	36
2.5	Fable (5): “We Only Have 50 Years of Uranium Ore to Sustain a World Fueled by Fission Power. Coal Reserves Would Last at Least 150 Years, so We Should Concentrate on Cleaning Up Coal Power”	38
2.6	Fable (6): “We Should Wait for Development of Nuclear Fusion Which Produces No Radioactivity”	38
2.7	Fable (7): “Hydrogen-Consuming Fuel-Cell Engines and Electric Energy Storage Batteries Can Replace Petrol-Burning Automobile Engines in the Future; Nuclear Is Not Needed”	39
2.8	Fable (8): “Nuclear Reactor Operations Are Unsafe”	42

2.9	Fable (9): “The Longer the Lifetime of a Radioactive Element, the More Dangerous It Is for Man”	43
2.10	Fable (10): “Thousands of People Will Die After a Nuclear Plant Meltdown”	44
2.11	Fable (11): “Exposure to “Radiation” Can Cause Long-Term After-Effects in One’s Body”	44
2.12	Fable (12): “Nuclear Plants Consume Millions of Gallons of Water, Depriving Others of This Commodity”	46
3	Energy Consumption and Energy Sources on Planet Earth	47
3.1	Definition of Energy and Units for Energy and Power	47
3.2	Amounts and Forms of Energy Consumed by Man	51
3.3	A Brief History of Energy	55
3.4	Summary of Primary Energy Sources	63
4	“Renewable” Energy Sources and Their Limitations	65
4.1	Sunshine-Produced Biomass and Biofuels	66
4.2	Direct Solar Energy Conversion	68
4.3	Wind Energy	71
4.4	Geothermal, Hydro, and Ocean-Wave Power	73
4.5	Economic Comparisons	75
5	Portable Energy and Propulsion Technologies	77
5.1	Review of Portable Fuels and Other Energy Carriers	78
5.1.1	Portable Synfuels	78
5.1.2	Electric Storage Batteries	86
5.1.3	Flywheel Energy Storage (Mechanical Batteries)	88
5.2	Vehicle Propulsion Engines	91
5.2.1	Internal Combustion Engines (ICEs)	91
5.2.2	Electrochemical Fuel-Cell Engines (FCEs)	93
5.2.3	Steam Engines	98
6	Coal and Nuclear Power Generation	99
6.1	Coal-Burning Power Plants	99
6.2	Nuclear Power Reactors	101
6.2.1	Basic Physics, Design, and Operation of a Reactor	104
6.2.2	Breeders and Mixed Fuel Reactors	111
6.2.3	Nuclear Reactors Versus Nuclear Bombs	115
6.3	The Uranium Fuel Cycle and Its Environmental Impact	117
6.3.1	Uranium Enrichment	121
6.3.2	Fuel Re-processing	124
6.3.3	Final Disposal of Radio-Waste	127
6.4	Nuclear Fusion	131

7	Safety Considerations in Nuclear Operations	135
7.1	Nature of Nuclear Radiation	135
7.2	Biological Effects of Nuclear Radiation	137
7.3	Radiation Dose Measurements and Tolerable Exposures	142
7.4	Radiation Protection in Reactor Operations	146
7.5	Mishaps and Malfunctions in Reactor Operations.....	147
7.6	Nuclear Criticality Accidents.....	148
8	Nuclear Weapon Controls and Non-proliferation.....	157
8.1	The Nuclear Age and World Realities	157
8.2	Safeguards Against Terrorists	162
8.3	The Non-Proliferation Treaty (NPT) and International Atomic Energy Agency (IAEA)	165
9	Conclusions, Action Items, and Predictions	171
9.1	Synopsis	171
9.2	Action Items.....	176
9.2.1	Development of Synthetic Fuel (Synfuel) Manufacture, Storage, and Distribution	177
9.2.2	Portable Energy Storage Devices.....	180
9.2.3	Development of Advanced Automotive and Aircraft Engines	181
9.2.4	Breeder Reactor Development, Testing, Deployment, and Burner-to-Breeder Conversions.....	181
9.2.5	Reprocessing, Enrichment, and Fabrication of Reactor Fuels.....	183
9.2.6	Coal Usage Reassignment Programs	183
9.3	Anticipations	184
	Abbreviations	189
	Chemical Symbols of Selected Elements and Isotopes	191
	International MKS Units & Prefixes.....	193
	Atomic/Molecular Units	193
	Prefixes.....	193
	About the Author	195
	Acknowledgments	197

Annotated Bibliography	199
I. Nuclear and Other Energy Sources; History, and Needs of Man.....	199
II. Technical Books, Reports, Articles on Nuclear Reactor Design & Engineering: Neutronics, Radiation, Fuels, Safety, Accidents, Nuclear Materials and Nuclear Medicine.....	200
III. Books, Reports, and Articles on Chemical Fuel-Cells and Synfuels	201
IV. Reports and Articles on Coal, Oil, and Natural Gas	202
V. Reports and Articles on Solar, Wind, and Geothermal Energy	202
VI. Reports and Articles on Bio-Mass Energy	202
VII. Books on Risk Analysis	202
Index.....	203

The Nuclear Imperative

A Critical Look at the Approaching Energy Crisis (More
Physics for Presidents)

Eerkens, J.

2010, XX, 212 p., Hardcover

ISBN: 978-90-481-8666-2
