1 The Evolution Towards WiMAX	1
Ramjee Prasad and Fernando J. Velez	
1.1 Introduction	1
1.2 History of Wireless Transmission	3
1.3 Broadband Access	11
1.3.1 The Path Towards Wireless Broadband Access	11
1.3.2 Types of Broadband Services	13
1.3.3 DSL Technology	15
1.4 Evolution of Wireless Broadband	17
1.4.1 Narrowband Wireless Local Loop	17
1.4.2 First Generation Broadband Wireless Systems	17
1.4.3 Second Generation Broadband Wireless Systems	18
1.4.4 Emergence of Global Standard Based Wireless Broadband	19
1.5 Fixed Wireless Access	20
1.5.1 Point-to-Point Networks	20
1.5.2 Point-to-Multipoint Networks	21
1.5.3 NLoS Point-to-Multipoint Networks	22
1.5.4 Mesh Networks	22
1.6 Broadband Wireless Access	23
1.6.1 Licensed Frequency Bands	23
1.6.2 License-Exempt Frequency Bands	24
1.7 Background on IEEE 802.16 and WIMAX	25
1.7.1 IEEE 802.16 Evolution	26
1.7.2 IEEE 802.16a	26
1.7.3 IEEE 802.16-2004	27
1.7.4 IEEE 802.16e	27
1.8 Fixed and Mobile WIMAX	30
1.9 Personal Broadband	32
1.10 WIMAX Forum	34

1.10.1 Difference Between WiMAX Forum and IEEE 802.16	34
1.10.2 Members	34
1.10.3 Working Groups	35
1.10.4 WiMAX Products Certification	35
1.10.5 WiMAX Forum Certified Program Milestones	41
1.10.6 Certification Roadmap	41
1.10.7 Benefits of an Industry Standard and Certified Products	42
1.10.8 WiMAX Forum Certified Products	44
1.11 Frequency Band Allocations for WiMAX	45
1.12 ITU Classification Adds Credibility to WiMAX	48
1.13 WiMAX Applications and Services	48
1.13.1 Fixed Broadband Wireless Applications	49
1.13.2 VoIP over WiMAX	50
1.14 Salient Features of WiMAX	55
1.15 Fixed, Portable, and Mobile Terminals	57
1.16 Conclusions	60
References	61
2 OFDMA WiMAX Physical Layer	63
Ramjee Prasad and Fernando J. Velez	
2.1 Introduction	63
2.2 History and Development of OFDM	64
2.2.1 Evolution	64
2.2.2 Applications of OFDM	67
2.3 OFDM Fundamentals	67
2.3.1 OFDM Versus FDM	67
2.3.2 OFDM Signal Characteristics	69
2.4 OFDM Transmission	71
2.4.1 Concept	71
2.4.2 Serial to Parallel Converter	73
2.4.3 Demodulator	73
2.5 OFDM Symbol Description	74
2.6 ISI and ICI Mitigation	74
2.7 Spectral Efficiency	77
2.8 Orthogonal Frequency Division Modulation Access	77
2.8.1 Improvements	77
2.8.2 Subchannelization	77
2.8.3 OFDMA Subchannelization: Its advantages to WiMAX	78
2.9 Advantages of OFDM Systems	78
2.10 Disadvantages of OFDM Systems	80
2.10.1 Strict Synchronization Requirement	80
2.10.2 Peak-to-Average Power Ratio	80
2.10.3 Co-channel Interference Mitigation in Cellular OFDM	81

2.11 Scalable OFDMA	81
2.11.1 Parameters and Principles	81
2.11.2 Reference Model	83
2.12 IEEE 802.16 PHY Layer	84
2.12.1 Supported Frequency Bands	84
2.12.2 Channel Bandwidth	84
2.12.3 IEEE 802.16 PHY Interface Variants	84
2.13 WirelessMAN-SC PHY	87
2.13.1 Overview	87
2.13.2 Duplexing Techniques and PHY Type Parameter Encodings	88
2.13.3 Frame Structure	90
2.13.4 Downlink PHY	91
2.13.5 Uplink PHY	97
2.14 WirelessMAN-OFDM PHY	99
2.14.1 Channel Coding	99
2.14.2 Concatenated Reed–Solomon–Convolutional Code (RS-CC)	101
2.15 WirelessMAN-OFDMA PHY	111
2.15.1 Overview	111
2.15.2 Subcarrier Allocation Modes	113
2.16 Summary and Conclusions	133
References	133
3 Medium Access Control Layer	137
Ramjee Prasad and Fernando J. Velez	
3.1 Introduction	137
3.2 MAC Sub-layers	138
3.3 MAC Protocol Data Unit (PDU) and Service Data Unit	139
3.4 Service Specific Convergence Sub-layer (CS)	140
3.4.1 Mission and Functions	140
3.4.2 Connections and Addressing, Connection ID (CID) and Service Flows	142
3.5 MAC Common Part Sub-layer (MAC CPS)	150
3.5.1 Mission	150
3.5.2 MAC Addressing and Connections	150
3.5.3 MAC PDU Format	151
3.6 MAC Header Formats	152
3.6.1 Generic MAC Header	152
3.6.2 MAC Header Without Payload	152
3.7 MAC Sub-headers, Special Payloads and Sub-header Ordering	155
3.7.1 Significance of Type Field	157
3.8 IEEE 802.16 MAC Connections	158

3.9 Basic, Primary and Secondary Management Connections	158
3.9.1 MAC Management Message Format	159
3.10 Fragmentation, Packing and Concatenation	161
3.10.1 Fragmentation	161
3.10.2 Packing	162
3.10.3 Concatenation	163
3.10.4 CRC Calculation	164
3.11 Encryption of MAC PDUs	165
3.12 Automatic Repeat Request (ARQ)	165
3.12.1 Error Control	165
3.12.2 ARQ Blocks	166
3.12.3 ARQ Methodology	167
3.12.4 HARQ	171
3.13 Scheduling Control	174
3.13.1 Scheduling Services	175
3.14 Bandwidth Allocation and Request Mechanisms	175
3.14.1 Role of SSs	175
3.14.2 Requests	176
3.14.3 Grants	177
3.14.4 Polling	178
3.15 Contention Resolution	183
3.15.1 Transmission Opportunity and Example for Contention-Based Bandwidth Requests	184
3.16 Network Entry	185
3.16.1 Downlink Channel Synchronization	186
3.16.2 Initial Ranging	186
3.16.3 Capabilities Negotiation	187
3.16.4 Authentication	188
3.16.5 Registration	188
3.16.6 IP Connectivity Stages	189
3.16.7 Transport Connection Creation	189
3.17 Summary and Conclusions	189
References	190
4 Quality of Service	191
Ramjee Prasad and Fernando J. Velez	
4.1 Introduction	191
4.2 Interpretation and Definition	192
4.2.1 Technical and Customer-Specific QoS Parameters	192
4.2.2 QoS Classes	194
4.3 QoS Architecture for IEEE 802.16 MAC Protocol	196
4.4 QoS Revisioning	198
4.4.1 Service Flow	198
4.4.2 Service Flow Attributes	199

4.5	Object Model	199
4.5.1	Attributes	199
4.5.2	Global Service Flows	201
4.5.3	Conventions Used for Global Service Class Name	201
4.5.4	Global Service Flow Class Name Parameters	201
4.5.5	Service Flow Creation	203
4.6	Service Classes	204
4.7	Authorization Module	205
4.7.1	Concept	205
4.7.2	Static Authorization Model	205
4.7.3	Dynamic Authorization Model	205
4.8	Service Flow Types	206
4.8.1	Provisioned Service Flow	206
4.8.2	Admitted Service Flow	207
4.8.3	Active Service Flow	207
4.9	Service Flow Creation	208
4.9.1	Three-Way Handshaking Protocol	208
4.9.2	Dynamic Service Flow Creation	209
4.9.3	Dynamic Service Flow Modification and Deletion	210
4.10	Summary and Conclusions	214
