

Preface

A large international conference in Electronic Engineering and Computing Technology was held in London, UK, July 1–3, 2009, under the World Congress on Engineering (WCE 2009). The WCE 2009 was organized by the International Association of Engineers (IAENG); the Congress details are available at: <http://www.iaeng.org/WCE2009>. IAENG is a non-profit international association for engineers and computer scientists, which was founded originally in 1968. The World Congress on Engineering serves as good platforms for the engineering community to meet with each other and exchange ideas. The conferences have also struck a balance between theoretical and application development. The conference committees have been formed with over 200 members who are mainly research center heads, faculty deans, department heads, professors, and research scientists from over 30 countries. The conferences are truly international meetings with a high level of participation from many countries. The response to the Congress has been excellent. There have been more than 800 manuscript submissions for the WCE 2009. All submitted papers have gone through the peer review process, and the overall acceptance rate is 57%.

This volume contains 61 revised and extended research articles written by prominent researchers participating in the conference. Topics covered include Control Engineering, Network Management, Wireless Networks, Biotechnology, Signal Processing, Computational Intelligence, Computational Statistics, Internet Computing, High Performance Computing, and industrial applications. The book offers the state of the art of tremendous advances in electronic engineering and computing technology and also serves as an excellent reference work for researchers and graduate students working on electronic engineering and computing technology.
