

Contents

1	Introduction and Basic Concepts	1
1.1	Need and Scope of the Book	1
1.2	Hydrological Cycle	2
1.3	Classification of Subsurface Water	6
1.4	Classification of Water with Respect to Origin	7
1.5	Hydrological Classification of Geological Formations	8
1.5.1	Types of Aquifers	8
1.6	Methods and Stages of Investigations	10
	Further Reading	11
2	Fractures and Discontinuities	13
2.1	Introduction	13
2.2	Discontinuities—Types, Genetic Relations and Significance	13
2.2.1	Bedding Plane	13
2.2.2	Foliation	14
2.2.3	Fractures and Joints	15
2.2.4	Faults and Shear Zones	20
2.2.5	Other Geological Discontinuities	23
2.3	Fracture Characterization and Measurements	24
2.3.1	Number of Sets	24
2.3.2	Orientation	24
2.3.3	Spacing (Interval)	26
2.3.4	Persistence (Fracture Length)	27
2.3.5	Fracture Density	27
2.3.6	Fracture Area and Shape	28
2.3.7	Volumetric Fracture Count	28
2.3.8	Matrix Block Unit	29
2.3.9	Fracture Connectivity	30
2.3.10	Rock Quality Designation (RQD)	30
2.3.11	Aperture	30
2.3.12	Asperity	31
2.3.13	Wall Coatings and Infillings	31
2.4	Methods of Field Investigations	31
2.4.1	Scanline Surveys	32
2.4.2	Areal Surveys	32

2.4.3	Borehole Surveys	33
2.4.4	3D Methods	33
	Further Reading	33
3	Hydrogeological Investigations	35
3.1	Geological Investigations	35
3.2	Geomorphological Investigations	35
3.2.1	Landforms	36
3.2.2	Drainage Characteristics	36
3.3	Geohydrological Investigations	38
3.3.1	Water-level Measurements	38
3.4	Hydrogeological Maps	41
3.4.1	Regional Maps	41
3.4.2	Map Media—Hard Copy and Electronic	41
3.4.3	Special Purpose Maps	42
	Further Reading	44
4	Remote Sensing	45
4.1	Introduction	45
4.2	Physical Principles	46
4.3	Remote Sensors	47
4.3.1	Photographic Systems	47
4.3.2	Line Scanning Systems	48
4.3.3	Digital Cameras	48
4.3.4	Imaging Radar System	49
4.4	Important Spaceborne Sensors	50
4.5	Interpretation Principles	52
4.6	Interpretation of Remote Sensing Data	53
4.6.1	Panchromatic Photographs and Images	53
4.6.2	Multispectral Image Data	54
4.6.3	CIR Photographs and Composites	54
4.6.4	Thermal IR Image Data	55
4.6.5	SAR Imagery	56
4.7	Groundwater Indicators on Remote Sensing Data Products	57
4.8	Thematic Applications	58
4.8.1	Features Associated with Recharge Zones	58
4.8.2	Features Associated with Discharge Sites	59
4.8.3	Soil Moisture	59
4.8.4	Vegetation	60
4.8.5	Topography and Digital Elevation Model	60
4.8.6	Landforms	61
4.8.7	Depth of Weathering and Regolith	61
4.8.8	Lithology	61
4.8.9	Geological Structure	62
4.8.10	Lineaments Including Joints and Fractures	63
4.8.11	Faults and Shear Zones	67
4.8.12	Soil Type	68
4.8.13	Drainage Characteristics	68
4.8.14	Special Geological Features	69

4.9	Digital Image Processing	69
4.9.1	Introduction and Methodology	69
4.9.2	Digital Image Enhancement of Groundwater Indicators	70
4.10	Application of Remote Sensing in Estimating other Hydrological Parameters	71
4.11	Emerging Developments and Applications	71
	Further Reading	73
5	Geophysical Exploration	75
5.1	Introduction	75
5.2	Electrical Resistivity Methods	75
5.2.1	Basic Concepts and Procedures	75
5.2.2	Delineation of Rock Anisotropy	79
5.3	Electromagnetic Methods	82
5.3.1	Introduction	82
5.3.2	EM Method—Frequency Domain	82
5.3.3	Transient EM Method	83
5.4	Combined EM-Resistivity Surveys	84
5.5	Complex Conductivity Measurements	84
5.6	Seismic Methods	84
5.6.1	Basic Concepts and Procedures	84
5.6.2	Azimuthal Seismic Refraction Method	85
5.7	Radon Survey	86
5.8	Radar Methods	86
5.9	Gravity and Magnetic Methods	87
5.10	Magnetic Resonance Sounding (MRS)	89
5.11	Geophysical Tomography	89
5.12	Subsurface Methods	90
5.12.1	Exploratory Excavation and Drilling	90
5.12.2	Geophysical Well Logging	91
	Further Reading	94
6	Geographical Information System (GIS)	95
6.1	Introduction	95
6.1.1	Why GIS for Groundwater Studies?	95
6.2	Basics of GIS	97
6.2.1	Location Data	97
6.2.2	Attribute Data	97
6.2.3	Basic Data Structures in GIS	98
6.3	GIS Methodology	98
6.3.1	Data Selection and Acquisition	98
6.3.2	Data Preprocessing	99
6.3.3	Data Management	100
6.3.4	Data Manipulation and Analysis	100
6.3.5	Data Output	104
6.3.6	Sources of Error	104
6.4	Thematic GIS Applications in Groundwater	104
6.4.1	Study of Water-Table Behaviour and Seepage Pattern	104
6.4.2	Evaluation of Well Distribution in Different Aquifers	105

6.4.3	Groundwater Exploration and Recharge	106
6.4.4	Chemical Quality and Water Use	107
6.4.5	Groundwater Pollution Potential and Hazard Assessment	108
6.4.6	Salinity Hazard Mapping	110
6.4.7	GIS and Groundwater Modelling	111
6.4.8	Concluding Remarks	112
	Further Reading	113
7	Principles of Groundwater Flow and Solute Transport	115
7.1	Groundwater Flow	115
7.1.1	Laminar and Turbulent Flow	115
7.1.2	Darcy's Law	116
7.1.3	General Equation of Flow	117
7.2	Groundwater Flow in Fractured Rocks	118
7.2.1	Parallel Plate Model	119
7.2.2	Double Porosity Model	123
7.2.3	Equivalent Porous Medium Model (EPM)	125
7.2.4	Discrete Fracture Network Models	125
7.2.5	Equivalent Parallel Plate Model	126
7.3	Flow in the Unsaturated Zone	126
7.3.1	Flow Through Unsaturated Porous Media	127
7.3.2	Flow Through Unsaturated Fractured Rock	128
7.4	Principles of Solute Transport in Fractured Media	130
7.4.1	Mechanism of Solute Transport	130
	Further Reading	138
8	Hydraulic Properties of Rocks	139
8.1	Basic Concepts and Terminology	139
8.2	Hydraulic Conductivity of Fractured Media	144
8.2.1	Relationship of Hydraulic Conductivity with Fracture Aperture and Spacing	145
8.2.2	Effect of Stress on Permeability	146
8.2.3	Relationship of Permeability with Depth	149
8.2.4	Influence of Temperature on Permeability	150
8.2.5	Effect of Fracture Skin on Permeability	151
8.2.6	Interconnectivity of Fractures	151
8.3	Anisotropy and Heterogeneity	151
8.4	Representative Elementary Volume (REV)	152
	Further Reading	154
9	Estimation of Hydraulic Properties of Aquifers	155
9.1	Laboratory Methods	155
9.1.1	Indirect Methods	155
9.1.2	Direct Method	156
9.2	Field Methods	157
9.2.1	Packer Tests	157
9.2.2	Slug Test	162
9.2.3	Pumping Tests	165
9.2.4	Pumping Tests in Fractured Rock Aquifers	185

9.2.5	Cross-hole Tests	188
9.2.6	Variable-Discharge (Step-drawdown) Test	189
9.2.7	Hydraulic Tomography (HT)	191
	Further Reading	192
10	Tracer and Isotope Techniques	193
10.1	Introduction	193
10.2	Types of Tracers	193
10.2.1	Dyes and Salts	194
10.2.2	Organic Compounds	194
10.3	Tracer Injection Tests	195
10.3.1	Groundwater Velocity Method	195
10.3.2	Point Dilution Method	195
10.3.3	Well Dilution Method	196
10.3.4	Forced Gradient Tracer Tests (FGTTs)	197
10.4	Isotopes	198
10.4.1	Stable Isotopes	198
10.5	Radioactive Isotopes	199
10.5.1	Recharge Estimation	200
10.5.2	Age Dating	202
	Further Reading	203
11	Groundwater Quality	205
11.1	Introduction	205
11.2	Expressing Water Analysis Data	205
11.3	Isotopic Composition	206
11.4	Dissolved Constituents	206
11.5	Graphical Presentation of Chemical Data	207
11.5.1	Hydrochemical (Isocone) Maps	207
11.5.2	Hydrochemical Pattern Diagrams	208
11.6	Modification of Chemical Characters of Groundwater	212
11.6.1	Ion Exchange	212
11.6.2	Membrane Effect	213
11.6.3	Sulphate Reduction	213
11.7	Hydrochemical Zoning and Hydrochemical Facies	214
11.7.1	Hydrochemical Zoning	214
11.7.2	Hydrochemical Facies	214
11.8	Quality Criteria for Various Uses	216
11.8.1	Domestic Use	216
11.8.2	Quality Criteria for Other Uses	219
	Further Reading	220
12	Groundwater Contamination	221
12.1	Introduction	221
12.2	Movement of Contaminants	221
12.3	Sources of Groundwater Contamination	223
12.3.1	Geogenic Sources	223
12.3.2	Anthropogenic Sources	225
12.3.3	Radioactive Waste Disposal	227

12.4	Organic Contaminants	230
12.4.1	Transport of LNAPLs	230
12.4.2	Transport of DNAPLs	231
12.4.3	Remediation	233
12.5	Miscellaneous Sources of Groundwater Contamination	235
12.6	Evaluation of Contamination Potential and Hazard	235
	Further Reading	236
13	Hydrogeology of Crystalline Rocks	237
13.1	Introduction	237
13.2	Landforms and Drainage	238
13.3	Groundwater Occurrence	240
13.3.1	Weathered Profile	240
13.3.2	Fractured Media	242
13.4	Hydraulic Characteristics	242
13.5	Water Wells	246
13.5.1	Well Yields	246
13.5.2	Optimum Depth of Wells	249
13.6	Assessment of Groundwater Recharge	251
13.7	Groundwater Quality	252
13.7.1	Effect of Lithology	252
13.7.2	Hydrochemical Zoning	253
13.7.3	Groundwater Contamination	254
	Further Reading	255
14	Hydrogeology of Volcanic Rocks	257
14.1	Weathering, Landform and Drainage	257
14.2	Hydrogeology	259
14.2.1	Plateau Basalts	259
14.2.2	Volcanic Islands—Submarine Eruptions	261
14.2.3	Dykes and Sills	262
14.3	Groundwater Occurrence	262
14.4	Hydraulic Characteristics	264
14.5	Groundwater Development	266
14.6	Groundwater Recharge	267
14.7	Groundwater Quality	267
	Further Reading	268
15	Hydrogeology of Carbonate Rocks	269
15.1	Introduction	269
15.2	Weathering and Landforms—The Karst	269
15.3	Springs	274
15.4	Hydrogeological Characteristics	277
15.5	Assessment of Groundwater Recharge	282
15.6	Groundwater Quality	285
15.7	Groundwater Development	286
	Further Reading	289

16 Hydrogeology of Clastic Formations	291
16.1 Unconsolidated Sediments	291
16.1.1 Fluvial Deposits	291
16.1.2 Glacial Deposits	292
16.2 Consolidated Sediments	294
16.2.1 Sandstones	294
16.2.2 Shales and Siltstones	296
16.2.3 Groundwater Development	296
16.3 Water Quality	297
Further Reading	298
17 Water-wells	299
17.1 Types of Wells	299
17.1.1 Dugwells	299
17.1.2 Borewells	300
17.1.3 Horizontal Borewells	301
17.1.4 Dug-cum-Borewell and Collector Well	302
17.1.5 Infiltration Galleries (QANAT)	303
17.2 Criteria for Siting Wells	304
17.3 Methods of Well Construction	306
17.3.1 Cable Tool Method	307
17.3.2 Direct Circulation Hydraulic Rotary Drilling	308
17.3.3 Reverse Circulation Rotary Method	308
17.3.4 Air Rotary Method	308
17.4 Well Development	309
17.4.1 Development Techniques in Unconsolidated Formations	309
17.4.2 Development of Wells in Hard Rocks	310
17.5 Hydraulic Characteristics of Wells	312
Further Reading	315
18 Geothermal Reservoirs and Hot Dry Rock Systems	317
18.1 Introduction	317
18.2 Hot Dry Rock (HDR) Systems	318
18.3 Flow Characteristics	319
18.4 Reservoir Properties	319
18.4.1 Single Well Tests	320
18.4.2 Interference Tests	320
18.4.3 Tracer Tests	321
18.5 Ground Subsidence	321
18.6 Water Quality	322
18.7 Origin of Geothermal Waters	322
Further Reading	323
19 Groundwater Modeling	325
19.1 Introduction	325
19.2 Defining the Model's Purpose	325
19.3 Model Conceptualization	326

19.4	Setting-up a Numerical Groundwater Model	326
19.4.1	Model Grid	326
19.4.2	Defining Model Boundaries	327
19.4.3	Inputting Model Parameters	327
19.5	Modeling of Homogenous Porous Aquifer	329
19.5.1	Mathematical Formulation	329
19.5.2	Solution of Mathematical Equation	329
19.5.3	Modeling Software	330
19.5.4	Model Calibration and Validation	331
19.5.5	Case Studies	331
19.6	Modeling of Fractured Rock Aquifer System	334
19.6.1	Groundwater Flow Equation for Parallel Plate Model	335
19.6.2	Particle Tracking Approach for Solute Transport	336
19.6.3	Discrete Fracture Network (DFN) Model	336
19.6.4	Dual Porosity (DP) Model	341
19.6.5	Stochastic Continuum (SC) Model	341
19.6.6	Computer Codes	341
19.6.7	Case Studies	342
19.7	Concluding Remarks	344
	Further Reading	344
20	Assessment and Management of Groundwater Resources	345
20.1	Introduction	345
20.2	Water Budget and Groundwater Balance	345
20.2.1	Hydrological Balance	345
20.2.2	Groundwater Balance	346
20.2.3	Estimation of Various Components of Groundwater Recharge	346
20.3	World's Water Resources	349
20.4	Groundwater Resources of India	350
20.5	Groundwater Level Fluctuations	354
20.5.1	Recharge from Rainfall and Snow-melt	354
20.5.2	Losses due to Evapotranspiration	355
20.5.3	Atmospheric Pressure	355
20.5.4	Ocean Tides	355
20.5.5	Earthquakes	355
20.5.6	Underground Nuclear Testing	356
20.5.7	Urbanization	356
20.5.8	Perennial Irrigation	358
20.6	Land Subsidence	359
20.7	Fresh–Seawater Relationship in Coastal Areas	361
20.7.1	Subsurface Groundwater Discharge (SGD) to the Sea	361
20.7.2	Seawater Intrusion	362
20.8	Groundwater Management and Artificial Recharge	366
20.8.1	Terminology	366
20.8.2	Artificial Groundwater Recharge/Management of Aquifer Recharge	367
20.8.3	Interbasin Water Transfer	370

20.9	Transboundary Aquifers	371
20.10	Impact of Climate Change	372
20.11	Groundwater Governance	373
20.11.1	Water Rights	373
20.11.2	Water Pricing	374
20.11.3	Groundwater Legislation	374
	Further Reading	375

Applied Hydrogeology of Fractured Rocks

Second Edition

Singhal †, B.B.S.; Gupta, R.P.

2010, XIX, 408 p., Hardcover

ISBN: 978-90-481-8798-0
