Preface	vii
Acknowledgments	xvii
1 What Is a Proof and Why?	1
1.1 What Is a Mathematician?	1
1.2 The Concept of Proof	3
1.3 How Do Mathematicians Work?	8
1.4 The Foundations of Logic	9
1.4.1 The Law of the Excluded Middle	10
1.4.2 <i>Modus Ponendo Ponens</i> and Friends	11
1.5 What Does a Proof Consist Of?	14
1.6 The Purpose of Proof	15
1.7 The Logical Basis for Mathematics	20
1.8 Platonism versus Kantianism	23
1.9 The Experimental Nature of Mathematics	25
1.10 The Role of Conjectures	26
1.10.1 Applied Mathematics	27
1.11 Mathematical Uncertainty	30
1.12 The Publication and Dissemination of Mathematics	34
1.13 Closing Thoughts	35
2 The Ancients	37
2.1 Eudoxus and the Concept of Theorem	37
2.2 Euclid the Geometer	39
2.2.1 Euclid the Number Theorist	42
2.3 Pythagoras	43
3 The Middle Ages and An Emphasis on Calculation	47
3.1 The Islamic Influence on Mathematics	47
3.2 The Development of Algebra	48
3.2.1 Al-Khwarizmi and the Basics of Algebra	48

3.3	Investigations of Zero	49
3.4	The Idea of Infinity	51
4	The Dawn of the Modern Age	53
4.1	Euler and the Profundity of Intuition	53
4.2	Dirichlet and the Heuristic Basis for Rigorous Proof	55
4.2.1	The Pigeonhole Principle	58
4.3	The Golden Age of the Nineteenth Century	58
5	Hilbert and the Twentieth Century	61
5.1	David Hilbert	61
5.2	G.D. Birkhoff, Norbert Wiener, and the Development of American Mathematics	63
5.3	L.E.J. Brouwer and Proof by Contradiction	69
5.4	The Generalized Ham Sandwich Theorem	76
5.4.1	Classical Ham Sandwiches	76
5.4.2	Generalized Ham Sandwiches	77
5.5	Much Ado about Proofs by Contradiction	79
5.6	Errett Bishop and Constructive Analysis	82
5.7	Nicolas Bourbaki	84
5.8	Srinivasa Ramanujan and a New View of Proof	94
5.9	The Legend of Paul Erdős	95
5.10	Homage to Paul Halmos	97
5.11	Perplexities and Paradoxes	98
5.11.1	Bertrand's Paradox	98
5.11.2	The Banach–Tarski Paradox	101
5.11.3	The Monte Hall Problem	103
5.11.4	The Axiom of Choice	106
6	The Tantalizing Four-color Theorem	107
6.1	Humble Beginnings	107
7	Computer-Generated Proofs	117
7.1	A Brief History of Computing	117
7.2	The Difference between Mathematics and Computer Science	125
7.3	Theorem Proving vs. Program Verification	126
7.4	How a Computer Can Search a Set of Axioms for the Statement and Proof of a New Theorem	128
7.5	How the Computer Generates the Proof of a New Result	130

8	The Computer as an Aid to Teaching and a Substitute for Proof	135
8.1	Geometer's Sketchpad	135
8.2	Computer Algebra Systems	136
8.3	Numerical Analysis	140
8.4	Computer Imaging and the Visualization of Proofs	141
8.5	Mathematical Communication	144
9	Aspects of Modern Mathematical Life	149
9.1	The World We Live In	149
9.2	Mathematics Institutes	150
9.3	Mathematical Communication	152
10	Beyond Computers: The Sociology of Mathematical Proof	157
10.1	The Classification of the Finite Simple Groups	158
10.2	Louis de Branges's Proof of the Bieberbach Conjecture	163
10.3	Wu-Yi Hsiang's Solution of the Kepler Sphere-Packing Problem	165
10.4	Thurston's Geometrization Program	170
10.5	Grisha Perelman's Attack on the Poincaré Conjecture and the Geometrization Program	176
11	A Legacy of Elusive Proofs	183
11.1	The Riemann Hypothesis	183
11.2	The Goldbach Conjecture	188
11.3	The Twin-Prime Conjecture	191
11.4	Stephen Wolfram and <i>A New Kind of Science</i>	192
11.5	Benoît Mandelbrot and Fractals	196
11.6	Roger Penrose and <i>The Emperor's New Mind</i>	198
11.7	The P/NP Problem	200
11.7.1	The Complexity of a Problem	201
11.7.2	Comparing Polynomial and Exponential Complexity	202
11.7.3	Polynomial Complexity	202
11.7.4	Assertions That Can Be Verified in Polynomial Time	203
11.7.5	Nondeterministic Turing Machines	203
11.7.6	Foundations of NP-Completeness	204
11.7.7	Polynomial Equivalence	204
11.7.8	Definition of NP-Completeness	204
11.8	Andrew Wiles and Fermat's Last Theorem	205
11.9	The Wily Infinitesimal	211

11.10	A Miscellany of Misunderstood Proofs	213
11.10.1	Frustration and Misunderstanding	214
12	John Horgan and “The Death of Proof?”	219
12.1	Horgan’s Thesis	219
12.2	Will “Proof” Remain the Benchmark for Mathematical Progress? .	221
13	Closing Thoughts	223
13.1	Why Proofs Are Important	223
13.2	Why It Is Important for Our Notion of Proof to Evolve and Change	225
13.3	What Will Be Considered a Proof in 100 Years?	226
	Index of Names	229
	References	241
	Index	251

The Proof is in the Pudding

The Changing Nature of Mathematical Proof

Krantz, S.G.

2011, XVII, 264 p. 88 illus., 5 illus. in color., Hardcover

ISBN: 978-0-387-48908-7
