Contents

1 Introduction 1
- 1.1 RNA secondary structures 3
- 1.2 RNA pseudoknot structures 8
- 1.3 Sequence to structure maps 10
- 1.4 Folding 15
- 1.5 RNA tertiary interactions: a combinatorial perspective 19

2 Basic concepts 23
- 2.1 k-Noncrossing partial matchings 23
  - 2.1.1 Young tableaux, RSK algorithm, and Weyl chambers . . 24
  - 2.1.2 The Weyl group 26
  - 2.1.3 From tableaux to paths and back 28
  - 2.1.4 The generating function via the reflection principle 34
  - 2.1.5 D-finiteness 41
- 2.2 Symbolic enumeration 45
- 2.3 Singularity analysis 47
  - 2.3.1 Transfer theorems 47
  - 2.3.2 The supercritical paradigm 49
- 2.4 The generating function $\mathbf{F}_k(z)$ 50
  - 2.4.1 Some ODEs 50
  - 2.4.2 The singular expansion of $\mathbf{F}_k(z)$ 52
- 2.5 n-Cubes 56
  - 2.5.1 Some basic facts 58
  - 2.5.2 Random subgraphs of the n-cube 60
  - 2.5.3 Vertex boundaries 61
  - 2.5.4 Branching processes and Janson's inequality 62
- 2.6 Exercises 64

3 Tangled diagrams 67
- 3.1 Tangled diagrams and vacillating tableaux 67
- 3.2 The bijection 70
- 3.3 Enumeration 78

4 Combinatorial analysis 85
4.1 Cores and Shapes 88
4.1.1 Cores 88
4.1.2 Shapes 91
4.2 Generating functions 98
4.2.1 The GF of cores 99
4.2.2 The GF of k-noncrossing, σ-canonical structures 103
4.3 Asymptotics 109
4.3.1 k-Noncrossing structures 109
4.3.2 Canonical structures 114
4.4 Modular k-noncrossing structures 120
4.4.1 Colored shapes 123
4.4.2 The main theorem 128
4.5 Exercises 136

5 Probabilistic Analysis 143
5.1 Uniform generation 143
5.1.1 Partial matchings 145
5.1.2 k-Noncrossing structures 147
5.2 Central limit theorems 154
5.2.1 The central limit theorem 155
5.2.2 Arcs and stacks 159
5.2.3 Hairpin loops, interior loops, and bulges 168
5.3 Discrete limit laws 175
5.3.1 Irreducible substructures 178
5.3.2 The limit distribution of nontrivial returns 183
5.4 Exercises 186

6 Folding 187
6.1 DP folding based on loop energies 191
6.1.1 Secondary structures 191
6.1.2 Pseudoknot structures 194
6.2 Combinatorial folding 198
6.2.1 Some basic facts 199
6.2.2 Motifs 201
6.2.3 Skeleta 204
6.2.4 Saturation 208

7 Neutral networks 213
7.1 Neutral networks as random graphs 213
7.2 The giant 216
7.2.1 Cells 218
7.2.2 The number of vertices contained in cells 223
7.2.3 The largest component 229
7.3 Neutral paths 234

7.4 Connectivity 237
7.5 Exercises 241
