
Table of Contents

Preface	xi
1 Preliminaries	1
1.1 Automorphism Groups	1
1.2 Some Fundamentals from Complex Analysis of Several Variables	3
1.3 Normal Families and Automorphisms	6
1.4 The Basic Examples	16
1.5 Orbit Accumulation Boundary Points	21
1.6 Holomorphic Vector Fields and Their Flows	23
2 Riemann Surfaces and Covering Spaces	29
2.1 Coverings of Riemann Surfaces	30
2.2 Covering Spaces and Invariant Metrics, I: Quotients of \mathbb{C}	31
2.3 Covering Spaces and Invariant Metrics, II: Quotients of D	35
2.4 Covering Spaces and Automorphisms in General	43
2.5 Compact Quotients of D and Their Automorphisms	48
2.6 The Automorphism Group of a Riemann Surface of Genus at Least 2	53
2.7 Automorphisms of Multiply Connected Domains	60
3 The Bergman Kernel and Metric	65
3.1 The Bergman Space and Kernel	66
3.2 The Bergman Metric on Complex Manifolds	72
3.3 Examples of Bergman Kernels and Metrics	76
3.4 The Bergman Metric on Strongly Pseudoconvex Domains	84
3.5 Stability of the Geometry of the Bergman Metric	92
3.6 Further Observations on the Geometric Stability of the Bergman Curvature	95

4	Applications of Bergman Geometry	99
4.1	Applications of Stability near the Boundary	99
4.2	Bergman Representative Coordinates	106
4.3	Equivariant Embedding and Concrete Realization of Abstract Complex Structures	114
4.4	Semicontinuity of Automorphism Groups	119
4.5	Obtaining a Stable Extension	126
5	Lie Groups Realized as Automorphism Groups	135
5.1	Introduction	135
5.2	General Philosophy	135
5.3	The Sierens/Zame Proof	136
5.4	The Bedford/Dadok Proof	145
6	The Significance of Large Isotropy Groups	161
6.1	Complex Manifolds with Large Isotropy at One Point	164
6.2	Proof of Theorem 6.1.1: An Invariant Metric	167
6.3	Proof of Theorem 6.1.1: Biholomorphisms of Metric Balls	169
6.4	Proof of Theorem 6.1.1, Assuming Lemma A	173
6.5	Statement and Discussion of Lemma A	174
6.6	Alternative Viewpoints and the Modification for the Theorem in the Manifold Case	175
6.7	The Compact Manifold Case	176
7	Some Other Invariant Metrics	179
7.1	The Carathéodory Metric	179
7.2	The Kobayashi Metric and Distance	182
7.3	Riemann Surfaces and Curvature Conditions for Kobayashi Hyperbolicity	188
7.4	Remarks on Finsler Metrics and the CRF System	193
7.5	The Wu Metric	194
7.6	The Cheng–Yau Invariant Einstein–Kähler Metric	202
8	Automorphism Groups and Classification of Reinhardt Domains	209
8.1	Reinhardt Domains	209
8.2	Sunada’s Work	209
8.3	Shimizu’s Theorems	214
8.4	Non-Reinhardt Circular Domains	216
9	The Scaling Method, I	219
9.1	A Basic Example: Scaling Method in Dimension 1	220
9.2	Higher Dimensional Scaling and the Wong-Rosay Theorem	225
9.3	A Theorem of Bedford and Pinchuk	242

9.4	Analytic Polyhedra with Noncompact Automorphism Group . .	246
9.5	The Greene–Krantz Conjecture	252
10	The Scaling Method, II	255
10.1	Klembeck’s Theorem with Stability in the C^2 Topology	255
10.2	Separating Boundary and Interior Points	261
10.3	Ian Graham’s Theorem by Scaling	269
10.4	Proper Mappings Between Bounded Strongly Pseudoconvex Domains	270
11	Afterword	275
	Bibliography	283
	Index	297

The Geometry of Complex Domains

Greene, R.E.; Kim, K.-T.; Krantz, S.G.

2011, XIV, 303 p. 14 illus., Hardcover

ISBN: 978-0-8176-4139-9

A product of Birkhäuser Basel
