## Part I A Primer on Functional Analysis

---

|   |    |
|---|----|
| <b>1 Banach Spaces and Operator Theory</b> .....                  | 3  |
| 1.1 Definition and Examples of Banach Spaces .....                | 3  |
| 1.2 Hölder's and Minkowski's Inequalities .....                   | 9  |
| 1.3 Basic Properties of Banach Spaces .....                       | 13 |
| 1.4 Linear Combinations, Sequences, Series, and Complete Sets ... | 20 |
| 1.5 Hilbert Spaces .....  | 25 |
| 1.6 Orthogonal Sequences in Hilbert Spaces .....                  | 32 |
| 1.7 Operators .....   | 42 |
| 1.8 Bounded Linear Functionals and the Dual Space .....           | 50 |
| <b>2 Functional Analysis</b> .....                                | 57 |
| 2.1 The Hahn–Banach Theorem and Its Implications .....            | 57 |
| 2.2 Reflexivity .....   | 61 |
| 2.3 Adjoints of Operators on Banach Spaces .....                  | 62 |
| 2.4 Adjoints of Operators on Hilbert Spaces .....                 | 64 |
| 2.5 The Baire Category Theorem .....                              | 69 |
| 2.6 The Uniform Boundedness Principle .....                       | 70 |
| 2.7 The Open Mapping Theorem .....                                | 73 |
| 2.8 Topological Isomorphisms .....                                | 75 |
| 2.9 The Closed Graph Theorem .....                                | 78 |
| 2.10 Weak Convergence .....                                       | 79 |

---

## Part II Bases and Frames

---

|          |  |     |
|----------|--|-----|
| <b>3</b> | <b>Unconditional Convergence of Series in Banach and Hilbert Spaces</b> . . . . .        | 87  |
| 3.1      | Convergence, Absolute Convergence, and Unconditional Convergence of Series . . . . .     | 88  |
| 3.2      | Convergence with Respect to the Directed Set of Finite Subsets of $\mathbf{N}$ . . . . . | 92  |
| 3.3      | Equivalent Characterizations of Unconditional Convergence . . . . .                      | 94  |
| 3.4      | Further Results on Unconditional Convergence . . . . .                                   | 100 |
| 3.5      | Unconditional Convergence of Series in Hilbert Spaces . . . . .                          | 104 |
| 3.6      | The Dvoretzky–Rogers Theorem . . . . .   | 116 |
| <b>4</b> | <b>Bases in Banach Spaces</b> . . . . .  | 125 |
| 4.1      | Hamel Bases . . . . .  | 125 |
| 4.2      | Bases . . . . .  | 128 |
| 4.3      | Schauder Bases . . . . .   | 130 |
| 4.4      | Equivalent Bases . . . . .   | 140 |
| 4.5      | Schauder’s Basis for $C[0, 1]$ . . . . .   | 142 |
| 4.6      | The Trigonometric System . . . . .   | 144 |
| 4.7      | Weak and Weak* Bases in Banach Spaces . . . . .  | 147 |
| <b>5</b> | <b>Biorthogonality, Minimality, and More About Bases</b> . . . . .                       | 153 |
| 5.1      | The Connection between Minimality and Biorthogonality . . . . .                          | 153 |
| 5.2      | Shades of Grey: Independence . . . . .   | 156 |
| 5.3      | A Characterization of Schauder Bases . . . . .   | 161 |
| 5.4      | A Characterization of Minimal Sequences and Schauder Bases . . . . .                     | 165 |
| 5.5      | The Haar System in $L^p[0, 1]$ . . . . .   | 168 |
| 5.6      | Duality for Bases . . . . .  | 170 |
| 5.7      | Perturbations of Bases . . . . .   | 172 |
| <b>6</b> | <b>Unconditional Bases in Banach Spaces</b> . . . . .                                    | 177 |
| 6.1      | Basic Properties and the Unconditional Basis Constant . . . . .                          | 177 |
| 6.2      | Characterizations of Unconditional Bases . . . . .                                       | 180 |
| 6.3      | Conditionality of the Schauder System in $C[0, 1]$ . . . . .                             | 184 |
| 6.4      | Conditionality of the Haar System in $L^1[0, 1]$ . . . . .                               | 187 |
| <b>7</b> | <b>Bessel Sequences and Bases in Hilbert Spaces</b> . . . . .                            | 189 |
| 7.1      | Bessel Sequences in Hilbert Spaces . . . . .   | 189 |
| 7.2      | Unconditional Bases and Riesz Bases in Hilbert Spaces . . . . .                          | 195 |

|          |   |     |
|----------|---|-----|
| <b>8</b> | <b>Frames in Hilbert Spaces</b>         | 203 |
| 8.1      | Definition and Motivation               | 204 |
| 8.2      | Frame Expansions and the Frame Operator | 214 |
| 8.3      | Overcompleteness                        | 221 |
| 8.4      | Frames and Bases                        | 224 |
| 8.5      | Characterizations of Frames             | 226 |
| 8.6      | Convergence of Frame Series             | 233 |
| 8.7      | Excess                                  | 238 |

---

## Part III Bases and Frames in Applied Harmonic Analysis

---

|           |  |     |
|-----------|--|-----|
| <b>9</b>  | <b>The Fourier Transform on the Real Line</b>                      | 249 |
| 9.1       | Summary: Main Properties of the Fourier Transform on the Real Line | 250 |
| 9.2       | Motivation: The Trigonometric System                               | 251 |
| 9.3       | The Fourier Transform on $L^1(\mathbf{R})$                         | 253 |
| 9.4       | The Fourier Transform on $L^2(\mathbf{R})$                         | 262 |
| 9.5       | Absolute Continuity  | 265 |
| <b>10</b> | <b>Sampling, Weighted Exponentials, and Translations</b>           | 267 |
| 10.1      | Bandlimited Functions  | 269 |
| 10.2      | The Sampling Theorem   | 274 |
| 10.3      | Frames of Weighted Exponentials                                    | 277 |
| 10.4      | Frames of Translates   | 282 |
| <b>11</b> | <b>Gabor Bases and Frames</b>                                      | 301 |
| 11.1      | Time-Frequency Shifts  | 302 |
| 11.2      | Painless Nonorthogonal Expansions                                  | 306 |
| 11.3      | The Nyquist Density and Necessary Conditions for Frame Bounds      | 311 |
| 11.4      | Wiener Amalgam Spaces  | 315 |
| 11.5      | The Walnut Representation  | 319 |
| 11.6      | The Zak Transform  | 324 |
| 11.7      | Gabor Systems at the Critical Density                              | 331 |
| 11.8      | The Balian–Low Theorem   | 335 |
| 11.9      | The HRT Conjecture   | 341 |
| <b>12</b> | <b>Wavelet Bases and Frames</b>                                    | 351 |
| 12.1      | Some Basic Facts   | 352 |
| 12.2      | Wavelet Frames and Wavelet Sets                                    | 354 |
| 12.3      | Frame Bounds and the Admissibility Condition                       | 362 |
| 12.4      | Multiresolution Analysis   | 370 |
| 12.5      | All About the Scaling Function, I: Refinability                    | 378 |
| 12.6      | All About the Scaling Function, II: Existence                      | 393 |

|                                  |     |
|----------------------------------|-----|
| 12.7 All About the Wavelet ..... | 406 |
| 12.8 Examples .....              | 417 |

---

## Part IV Fourier Series

---

|  |     |
|--|-----|
| <b>13 Fourier Series</b> .....                         | 429 |
| 13.1 Notation and Terminology .....                    | 429 |
| 13.2 Fourier Coefficients and Fourier Series .....     | 431 |
| 13.3 Convolution .....                                 | 434 |
| 13.4 Approximate Identities .....                      | 439 |
| 13.5 Partial Sums and the Dirichlet Kernel .....       | 443 |
| 13.6 Cesàro Summability and the Fejér Kernel .....     | 447 |
| 13.7 The Inversion Formula for $L^1(\mathbf{T})$ ..... | 452 |
| <b>14 Basis Properties of Fourier Series</b> .....     | 455 |
| 14.1 The Partial Sum Operators .....                   | 455 |
| 14.2 The Conjugate Function .....                      | 460 |
| 14.3 Pointwise Almost Everywhere Convergence .....     | 464 |

---

## Part V Appendices

---

|  |     |
|--|-----|
| <b>A Lebesgue Measure and Integration</b> .....      | 469 |
| A.1 Exterior Lebesgue Measure .....                  | 469 |
| A.2 Lebesgue Measure .....                           | 470 |
| A.3 Measurable Functions .....                       | 472 |
| A.4 The Lebesgue Integral .....                      | 473 |
| A.5 $L^p$ Spaces and Convergence .....               | 475 |
| A.6 Repeated Integration .....                       | 477 |
| <b>B Compact and Hilbert–Schmidt Operators</b> ..... | 481 |
| B.1 Compact Sets .....                               | 481 |
| B.2 Compact Operators .....                          | 482 |
| B.3 Hilbert–Schmidt Operators .....                  | 484 |
| B.4 Finite-Rank Operators and Tensor Products .....  | 485 |
| B.5 The Hilbert–Schmidt Kernel Theorem .....         | 488 |
| <b>Hints for Exercises</b> .....                     | 491 |
| <b>Index of Symbols</b> .....                        | 511 |
| <b>References</b> .....                              | 515 |
| <b>Index</b> .....                                   | 527 |
