

Contents

1 Preliminaries	1
1.1 Sobolev Spaces	1
1.1.1 Embedding Theorems	3
1.2 Linear Elliptic Equations	4
1.2.1 Fréchet Differentiability	4
1.2.2 Nemitski Operators	5
1.2.3 Dirichlet Principle	6
1.2.4 Regularity of the Solutions	10
1.2.5 The Inverse of the Laplace Operator	10
1.3 Linear Elliptic Eigenvalue Problems	10
1.3.1 Linear Compact Operators	11
1.3.2 Variational Characterization of The Eigenvalues	13
2 Some Fixed Point Theorems	17
2.1 The Banach Contraction Principle	17
2.2 Increasing Operators	20
3 Local and Global Inversion Theorems	23
3.1 The Local Inversion Theorem	23
3.2 The Implicit Function Theorem	25
3.3 The Lyapunov–Schmidt Reduction	26
3.4 The Global Inversion Theorem	27
3.5 A Global Inversion Theorem with Singularities	28
4 Leray–Schauder Topological Degree	33
4.1 The Brouwer Degree	33
4.2 The Leray–Schauder Topological Degree	36
4.2.1 Index of an Isolated Zero and Computation by Linearization	39

4.3	Continuation Theorem of Leray–Schauder	40
4.3.1	A Topological Lemma	40
4.3.2	A Theorem by Leray and Schauder	42
4.4	Other Continuation Theorems	44
5	An Outline of Critical Points	47
5.1	Definitions	47
5.2	Minima	48
5.3	The Mountain Pass Theorem	48
5.4	The Ekeland Variational Principle	53
5.5	Another Min–Max Theorem	54
5.6	Some Perturbation Results	56
6	Bifurcation Theory	61
6.1	Local Results	61
6.1.1	Bifurcation from a Simple Eigenvalue	62
6.1.2	Bifurcation from an Odd Eigenvalue	63
6.2	Bifurcation for Variational Operators	64
6.2.1	A Krasnoselskii Theorem for Variational Operators	65
6.2.2	Branching Points	68
6.3	Global Bifurcation	70
7	Elliptic Problems and Functional Analysis	73
7.1	Nonlinear Elliptic Problems	73
7.1.1	Classical Formulation	74
7.1.2	Weak Formulation	74
7.2	Sub- and Super-Solutions and Increasing Operators	76
8	Problems with A Priori Bounds	83
8.1	An Elementary Nonexistence Result	83
8.2	Existence of A Priori Bounds	84
8.3	Existence of Solutions	85
8.3.1	Using the Global Inversion Theorem	85
8.3.2	Using Degree Theory	86
8.3.3	Using Critical Point Theory	87
8.4	Positive Solutions	90
9	Asymptotically Linear Problems	97
9.1	Existence of Positive Solutions	97
9.2	Bifurcation from Infinity	99
9.3	On the Behavior of the Bifurcations from Infinity	101
9.4	The Local Anti-Maximum Principle	104
9.5	The Landesman–Lazer Condition	105
9.5.1	A Variational Proof of the Landesman–Lazer Result	107

10 Asymmetric Nonlinearities	111
10.1 The Approach by Ambrosetti and Prodi	111
10.2 The Approach by Amann–Hess	113
10.3 Variational Approach by Mountain Pass and Sub- and Super-Solutions	117
10.4 Approach by Degree Giving a Continuum of Solutions	119
11 Superlinear Problems	121
11.1 Using Min–Max Theorems	121
11.2 Superlinear Ambrosetti–Prodi Problem	124
12 Quasilinear Problems	131
12.1 First Results	131
12.2 Mountain Pass Theorem for Nondifferentiable Functionals and Applications	133
12.3 Application to Quasilinear Variational Problems	136
12.4 Some Nonvariational Quasilinear Problems	142
13 Stationary States of Evolution Equations	149
13.1 Soliton States to Stationary NLS Equations	149
13.2 Semiclassical States of NLS Equations with Potentials	155
13.3 Systems of NLS Equations	158
13.4 Nonautonomous Systems	163
13.5 Appendix	167
Appendix A: Sobolev Spaces	169
A.1 Weak Derivative	169
A.2 Sobolev Spaces	175
A.3 Boundary Values in Sobolev Spaces	177
A.4 Embedding Theorems	179
Exercises	185
Bibliography	193
Index	197

An Introduction to Nonlinear Functional Analysis and
Elliptic Problems

Ambrosetti, A.; Arcoya Álvarez, D.

2011, XII, 199 p. 12 illus., Hardcover

ISBN: 978-0-8176-8113-5

A product of Birkhäuser Basel
