1	Introduction	1
----------	---------------------------	----------

Part I Asymptotic Analysis of Optimal Control Problems for Partial Differential Equations: Basic Tools

2	Background Material on Asymptotic Analysis of Extremal Problems	15
2.1	Measure theory and basic notation	15
2.1.1	Hausdorff measures	17
2.2	Sobolev spaces and boundary value problems	19
2.2.1	Weak derivatives	19
2.2.2	Sobolev spaces	20
2.2.3	Vector-valued spaces of the type $\mathbf{L}^p(\mathbf{a}, \mathbf{b}; \mathbf{X})$	25
2.2.4	Lax–Milgram’s lemma	27
2.2.5	General setting of the variational formulation of boundary value problems	28
2.3	Spaces of periodic functions	33
2.4	Weak and weak-* convergence in Banach spaces	34
2.4.1	Weak convergence of measures	39
2.4.2	Weak convergence in $L^1(\Omega)$	43
2.5	Elements of capacity theory	44
2.6	On the space $W_0^{1,p}(\Omega) \cap L^p(\Omega, d\mu)$ and its properties	47
2.7	Sobolev spaces with respect to a measure	49
2.8	Boundary value problems in Sobolev spaces with measures ...	53
2.9	On weak compactness of a class of bounded sets in Banach spaces	58
3	Variational Methods of Optimal Control Theory	63
3.1	The general setting	64
3.2	Abstract extremal problems	72

3.3	Extremal problems for steady-state processes	78
3.3.1	Dirichlet and Neumann boundary control problems . . .	78
3.3.2	Ill-posed control objects	83
3.3.3	Optimal control of the Cauchy problem for an elliptic equation	84
3.3.4	Controls with hard constraints	86
3.4	Optimal control problems for parabolic equations	88
3.4.1	Distributed control	88
3.4.2	Control in the initial conditions	91
3.4.3	Neumann boundary control	94
3.5	Optimal control problems for hyperbolic equations	98
3.6	Optimality system to optimal control problems	100
3.6.1	The general setting of the Lagrange multiplier principle	100
3.6.2	Necessary optimality conditions in the form of variational inequalities	106
3.7	Optimal control of distributed singular systems	109
4	Suboptimal and Approximate Solutions to Extremal Problems	113
4.1	The notion of suboptimal and approximate solutions	114
4.2	Regularization of optimal control problems	117
4.3	ε -Suboptimal solutions to optimal control problems	123
4.4	Approximate solutions to distributed singular systems	129
5	Introduction to the Asymptotic Analysis of Optimal Control Problems: A Parade of Examples	133
5.1	Component-by-component limit analysis	134
5.2	Limit analysis of optimality conditions	143
5.3	Limit analysis of optimal control problems by Γ -convergence	150
5.4	Direct variational convergence of optimal control problems	156
6	Convergence Concepts in Variable Banach Spaces	161
6.1	General setting	161
6.2	Weak convergence in variable L^p -spaces	167
6.3	Two-scale convergence in variable L^p -spaces	171
6.4	Variable Sobolev spaces and two-scale convergence	181
6.4.1	p -Connected measures and their properties	181
6.4.2	Degenerate measures	184
6.4.3	Two-scale convergence in variable Sobolev spaces	185
6.5	Approximation of singular measures by smoothing and its application	189

6.6	Two-scale convergence with respect to a variable measure	194
6.7	Some properties of the strong convergence in spaces $L^2(\square, d\mu^h)$ associated with thin periodic structures	198
6.8	On approximative properties of Hilbert spaces with respect to a periodic Borel measure μ^h	203
6.9	The homothetic mean value property on periodically perforated domains	207
6.9.1	A measure approach to the description of the sets Ω_ε	209
6.9.2	The homothetic mean value property	212
7	Convergence of Sets in Variable Spaces	217
7.1	Set convergence in \mathbb{R}^n via the limit properties of characteristic functions	217
7.2	On some limit properties of characteristic functions for nonperiodically perforated domains	224
7.3	Convergence of sets associated with thin periodic structures	230
7.4	Set convergence in the sense of Kuratowski and in the Hausdorff metric	234
7.5	Parametrical convergence of open sets and of associated mappings	241
7.6	Kuratowski set convergence in variable spaces	247
7.7	γ_p -Convergence of open sets and Mosco convergence of the associated Sobolev spaces	257
8	Passing to the Limit in Constrained Minimization Problems	263
8.1	A short survey of Γ -convergence theory in metric spaces	264
8.2	Γ -Convergence of functionals defined on a Banach space	270
8.3	Variational convergence of constrained minimization problems in Banach spaces	275
8.4	Variational convergence of minimization problems in variable spaces	281
8.5	Asymptotic analysis of a Dirichlet optimal control problem	286
8.5.1	The statement of the optimal control problem and preliminary results	286
8.5.2	On modifications of the optimal control problem with controllability constraints	288
8.5.3	Passing to the limit in the modified optimal control problem	292
8.6	On homogenization of Dirichlet optimal control problems in perforated domains	299

Part II Optimal Control Problems on Periodic Reticulated Domains: Asymptotic Analysis and Approximate Solutions

9 Suboptimal Control of Linear Steady-State Processes on Thin Periodic Structures with Mixed Boundary Controls 311

9.1 A measure-theoretic approach to the description of the network Ω_ε 315

9.2 Statement of the optimal control problem 320

9.3 Convergence in the variable space \mathbb{Z}_ε 325

9.4 Definition of the limit problem and its properties 340

9.5 Main convergence theorem 343

9.6 Identification of the limit optimal control problem 347

9.7 On suboptimal controls for \mathbb{P}_ε -problems 350

10 Approximate Solutions of Optimal Control Problems for Ill-Posed Parabolic Problems on Thin Periodic Structures 357

10.1 Statement of the problem 360

10.2 On the solvability of \mathbb{P}_ε and its C -extension 362

10.3 On the description of $\mathbb{C}\mathbb{P}_\varepsilon$ in terms of singular measures 369

10.4 Convergence in the variable space \mathbb{Z}_ε 374

10.4.1 Convergence formalism for Dirichlet boundary controls 378

10.4.2 w -Convergence of admissible solutions of the C -extended problems 380

10.5 The limiting optimal control problem and its properties 381

10.6 Main convergence theorem 383

10.7 The limit analysis of the \mathbf{C} -extended optimal control problem 388

10.8 Recovery of the limiting singular optimal control problem \mathbb{P}^{hom} 394

10.9 On suboptimal controls for \mathbb{P}_ε -problems 398

10.10 Optimal control problem for systems on thin lattice structures with blowup 402

11 Asymptotic Analysis of Optimal Control Problems on Periodic Singular Graphs 409

11.1 ε -Periodic graphlike structures in \mathbb{R}^2 and their description 410

11.2 Statement of an optimal control problem on ε -periodic graphs 412

11.3 Convergence formalism in the variable spaces associated with ε -periodic graphs 416

11.4	Variational convergence of constrained minimization problems on varying graphs	421
11.5	Asymptotic analysis of optimal control problems on ε -periodic graphs	423
11.6	Modeling of suboptimal controls	432
11.7	An example of an optimal control problem on ε -periodic square grid	434
12	Suboptimal Boundary Control of Elliptic Equations in Domains with Small Holes	441
12.1	Statement of the problem	441
12.2	Reformulation of the original problem in terms of singular measures	445
12.3	Convergence in the variable space \mathbb{X}_ε	449
12.4	Definition of a limit problem and its property	456
12.5	Convergence theorem and correctors	456
12.6	Identification of the limiting optimal control problem	467
12.7	Optimality conditions for the limit problem and suboptimal controls for \mathbb{P}_ε -problem	472
13	Asymptotic Analysis of Elliptic Optimal Control Problems in Thick Multistructures with Dirichlet and Neumann Boundary Controls	477
13.1	Statement of the problem and basic notation	478
13.2	Description of the optimal control problem in terms of singular measures	481
13.3	The choice of topology	484
13.4	Definition of the limit problem and its properties	491
13.5	Analytical representation of the limit set of admissible solutions	492
13.6	Identification of the limiting cost functional	502
13.7	Modeling of suboptimal controls	506
14	Gap Phenomenon in Modeling of Suboptimal Controls to Parabolic Optimal Control Problems in Thick Multistructures	515
14.1	On solvability of the original optimal control problems	518
14.2	Formalism of convergence in variable Banach spaces	522
	14.2.1 The convergence concept for the \mathbb{P}_ε^a -problems	523
	14.2.2 The convergence concept for the \mathbb{P}_ε^b -problems	527
14.3	Definition of the limit problems and their properties	528
14.4	Analytical representation of the limit sets of admissible solutions	532
	14.4.1 Recovery of the set Ξ_a	532
	14.4.2 Recovery of the set Ξ_b	538
14.5	Identification of the cost functionals I_a and I_b	540

15	Boundary Velocity Suboptimal Control of Incompressible Flow in Cylindrically Perforated Domains	547
15.1	Preliminaries and notation	551
15.2	Admissible controls and regularity of solutions to the boundary value problem for Navier–Stokes equations ..	552
15.3	On solvability of the optimal boundary control problem	554
15.4	Reformulation of the problem (\mathbb{P}_ε)	555
15.5	Convergence in the variable space \mathbb{X}_ε	559
15.6	Definition of suboptimal controls	563
15.7	Convergence theorem	565
15.8	Identification of the limit optimal control problem	576
15.9	Suboptimal controls and their approximation properties	582
16	Optimal Control Problems in Coefficients: Sensitivity Analysis and Approximation	585
16.1	Notation and preliminaries	586
16.2	H -Convergence and a counterexample of Murat	590
16.3	Setting of the optimal control problem and existence theorem	593
16.4	H^c - and t -admissible domain perturbations for optimal control problems in coefficients	601
16.5	p -Perturbation of elliptic optimal control problems in coefficients	609
16.6	Mosco-stability of optimal control problems	612
