

Contents

1	Introduction to 3D Computer Vision	1
1.1	Introduction	1
1.2	Imaging Geometry and Camera Models	2
1.2.1	Camera Models	2
1.2.2	Single View Imaging Geometry	5
1.3	Single View Metrology and Reconstruction	7
1.3.1	Measurement on Space Planes	8
1.3.2	Camera Calibration from a Single View	9
1.3.3	Measurement in 3D Space	11
1.3.4	Examples of Single View Reconstruction	14
1.4	Two-View Geometry and 3D Reconstruction	17
1.4.1	Epipolar Geometry and Fundamental Matrix	17
1.4.2	Three Dimensional Reconstruction	18
1.5	Reconstruction of Structured Scenes from Two Images	20
1.5.1	Plane Detection Strategy	20
1.5.2	Camera Calibration and Reconstruction	24
1.6	Closure Remarks	26
1.6.1	Conclusion	26
1.6.2	Review Questions	26
	References	27
2	Simplified Camera Projection Models	29
2.1	Introduction	29
2.2	Affine Projection Model	30
2.3	Quasi-Perspective Projection Model	33
2.3.1	Quasi-Perspective Projection	33
2.3.2	Error Analysis of Different Models	36
2.4	Experimental Evaluations	38
2.4.1	Imaging Errors	39
2.4.2	Influence of Imaging Conditions	39
2.5	Closure Remarks	40

2.5.1	Conclusion	40
2.5.2	Review Questions	41
	References	41
3	Geometrical Properties of Quasi-Perspective Projection	43
3.1	Introduction	43
3.2	One-View Geometrical Property	44
3.3	Two-View Geometrical Property	46
3.3.1	Fundamental Matrix	47
3.3.2	Plane Induced Homography	50
3.3.3	Computation with Outliers	51
3.4	3D Structure Reconstruction	52
3.5	Evaluations on Synthetic Data	53
3.5.1	Fundamental Matrix and Homography	54
3.5.2	Outlier Removal	55
3.5.3	Reconstruction Result	55
3.6	Evaluations on Real Images	57
3.6.1	Test on Stone Dragon Images	57
3.6.2	Test on Medusa Head Images	59
3.7	Closure Remarks	60
3.7.1	Conclusion	60
3.7.2	Review Questions	60
	References	61
4	Introduction to Structure and Motion Factorization	63
4.1	Introduction	63
4.2	Problem Definition	65
4.3	Structure and Motion Factorization of Rigid Objects	68
4.3.1	Rigid Factorization Under Orthographic Projection	68
4.3.2	Rigid Factorization Under Perspective Projection	71
4.4	Structure and Motion Factorization of Nonrigid Objects	72
4.4.1	Bregler's Deformation Model	73
4.4.2	Nonrigid Factorization Under Affine Models	74
4.4.3	Nonrigid Factorization Under Perspective Projection	77
4.5	Factorization of Multi-Body and Articulated Objects	79
4.5.1	Multi-Body Factorization	79
4.5.2	Articulated Factorization	82
4.6	Closure Remarks	83
4.6.1	Conclusion	83
4.6.2	Review Questions	83
	References	84
5	Perspective 3D Reconstruction of Rigid Objects	87
5.1	Introduction	87
5.2	Previous Works on Projective Depths Recovery	89

5.2.1	Epipolar Geometry Based Algorithm	89
5.2.2	Iteration Based Algorithm	90
5.3	Hybrid Projective Depths Recovery	91
5.3.1	Initialization and Optimization	91
5.3.2	Selection of Reference Frames	93
5.4	Camera Calibration and Euclidean Reconstruction	94
5.4.1	Camera Self-calibration	94
5.4.2	Euclidean Reconstruction	96
5.4.3	Outline of the Algorithm	97
5.5	Evaluations on Synthetic Data	98
5.5.1	Projective Depths Recovery	98
5.5.2	Calibration and Reconstruction	99
5.6	Evaluations on Real Sequences	101
5.6.1	Test on Model House Sequence	102
5.6.2	Test on Stone Post Sequence	103
5.6.3	Test on Medusa Head Sequence	104
5.7	Closure Remarks	105
5.7.1	Conclusion	105
5.7.2	Review Questions	106
	References	106
6	Perspective 3D Reconstruction of Nonrigid Objects	109
6.1	Introduction	109
6.2	Perspective Depth Scales and Nonrigid Factorization	110
6.2.1	Perspective Depth Scales	110
6.2.2	Nonrigid Affine Factorization	111
6.3	Perspective Stratification	112
6.3.1	Linear Recursive Estimation	112
6.3.2	Nonlinear Optimization Algorithm	114
6.4	Evaluations on Synthetic Data	115
6.4.1	Reconstruction Results	116
6.4.2	Convergence and Performance Comparisons	116
6.5	Experiments with Real Sequences	118
6.5.1	Test on Franck Sequence	118
6.5.2	Test on Scarf Sequence	120
6.6	Closure Remarks	121
6.6.1	Conclusion	121
6.6.2	Review Questions	122
	References	122
7	Rotation Constrained Power Factorization	125
7.1	Introduction	125
7.2	Power Factorization for Rigid Objects	126
7.3	Power Factorization for Nonrigid Objects	127
7.3.1	Rotation Constrained Power Factorization	128

7.3.2	Initialization and Convergence Determination	130
7.3.3	Sequential Factorization	131
7.4	Evaluations on Synthetic Data	132
7.4.1	Reconstruction Results and Evaluations	132
7.4.2	Convergence Property	133
7.4.3	Influence of Imaging Conditions	135
7.5	Evaluations on Real Sequences	135
7.5.1	Test on Grid Sequence	135
7.5.2	Test on Franck Sequence	136
7.5.3	Test on Quilt Sequence	137
7.6	Closure Remarks	137
7.6.1	Conclusion	137
7.6.2	Review Questions	138
	References	139
8	Stratified Euclidean Reconstruction	141
8.1	Introduction	141
8.2	Deformation Weight Constraint	142
8.2.1	Nonrigid Factorization	142
8.2.2	Deformation Weight Constraint	143
8.2.3	Geometrical Explanation	145
8.3	Affine Structure and Motion Recovery	147
8.3.1	Constrained Power Factorization	147
8.3.2	Initialization and Convergence Determination	148
8.4	Segmentation and Stratification	149
8.4.1	Deformation Detection Strategy	149
8.4.2	Stratification to Euclidean Space	151
8.4.3	Implementation Outline	151
8.5	Evaluations on Synthetic Data	152
8.5.1	Reconstruction Results and Evaluations	152
8.5.2	Convergence Property and Segmentation	153
8.6	Evaluations on Real Sequences	156
8.6.1	Test on Grid Sequence	156
8.6.2	Test on Toy Sequence	157
8.7	Closure Remarks	158
8.7.1	Conclusion	158
8.7.2	Review Questions	159
	References	159
9	Quasi-Perspective Factorization	161
9.1	Introduction	161
9.2	Background on Factorization	162
9.3	Quasi-Perspective Rigid Factorization	164
9.3.1	Euclidean Upgrading Matrix	164
9.3.2	Algorithm Outline	169

9.4	Quasi-Perspective Nonrigid Factorization	170
9.4.1	Problem Formulation	170
9.4.2	Euclidean Upgrading Matrix	171
9.5	Evaluations on Synthetic Data	173
9.5.1	Evaluation on Rigid Factorization	173
9.5.2	Evaluation on Nonrigid Factorization	175
9.6	Evaluations on Real Image Sequences	176
9.6.1	Test on Fountain Base Sequence	177
9.6.2	Test on Franck Sequence	178
9.7	Closure Remarks	179
9.7.1	Conclusion	179
9.7.2	Review Questions	180
	References	180
Appendix A	Projective Geometry for Computer Vision	183
A.1	2D Projective Geometry	183
A.1.1	Points and Lines	183
A.1.2	Conics and Dual Conics	184
A.1.3	2D Projective Transformation	186
A.2	3D Projective Geometry	187
A.2.1	Points, Lines, and Planes	187
A.2.2	Projective Transformation and Quadrics	189
Appendix B	Matrix Decomposition	191
B.1	Singular Value Decomposition	191
B.1.1	Properties of SVD Decomposition	192
B.1.2	Low-Rank Matrix Approximation	193
B.2	QR and RQ Decompositions	194
B.3	Symmetric and Skew-Symmetric Matrix	195
B.3.1	Cross Product	195
B.3.2	Cholesky Decomposition	196
B.3.3	Extended Cholesky Decomposition	197
Appendix C	Numerical Computation Method	199
C.1	Linear Least Squares	199
C.1.1	Full Rank System	200
C.1.2	Deficient Rank System	201
C.2	Nonlinear Estimation Methods	202
C.2.1	Bundle Adjustment	202
C.2.2	Newton Iteration	203
C.2.3	Levenberg-Marquardt Algorithm	204
