

Contents

1	Introduction	1
1.1	Background	1
1.2	Main Aspects of Transformer Condition Monitoring and Assessment	3
1.2.1	Thermal Modelling	3
1.2.2	Dissolved Gas Analysis	4
1.2.3	Frequency Response Analysis	5
1.2.4	Partial Discharge Analysis	6
1.3	Drawbacks of Conventional Techniques	6
1.3.1	Inaccuracy of Empirical Thermal Models	6
1.3.2	Uncertainty in Dissolved Gas Analysis	7
1.3.3	Intricate Issues in Winding Deformation Diagnosis	7
1.4	Modelling Transformer and Processing Uncertainty Using Computational Intelligence	8
1.5	Contents of this Book	9
1.6	Summary	11
	References	12
2	Evolutionary Computation	15
2.1	The Evolutionary Algorithms of Computational Intelligence	15
2.1.1	Objectives of Optimisation	15
2.1.2	Overview of Evolutionary Computation	17
2.2	Genetic Algorithm	18
2.2.1	Principles of Genetic Algorithms	19
2.2.2	Main Procedures of a Simple Genetic Algorithm	20
2.2.3	Implementation of a Simple Genetic Algorithm	23
2.3	Genetic Programming	24
2.3.1	Background of Genetic Programming	24
2.3.2	Implementation Processes of Genetic Programming	25
2.4	Particle Swarm Optimisation	29
2.4.1	Standard Particle Swarm Optimisation	30

2.4.2	Particle Swarm Optimisation with Passive Congregation	31
2.5	Summary	34
	References	34
3	Methodologies Dealing With Uncertainty	37
3.1	The Logical Approach of Computational Intelligence	37
3.2	Evidential Reasoning	38
3.2.1	The Original Evidential Reasoning Algorithm	38
3.2.2	The Revised Evidential Reasoning Algorithm	45
3.3	Fuzzy Logic	48
3.3.1	Foundation of Fuzzy Logic	48
3.3.2	An Example of a Fuzzy Logic System	48
3.4	Bayesian Networks	50
3.4.1	The Bayes' Theorem	50
3.4.2	Bayesian Networks	51
3.4.3	Parameter Learning to Form a Bayesian Network.	52
3.5	Summary	53
	References	53
4	Thermoelectric Analogy Thermal Models of Power Transformers	55
4.1	Introduction	55
4.2	Conventional Thermal Models in IEC and IEEE Regulations	56
4.2.1	Steady-State Temperature Models	56
4.2.2	Transient-State Temperature Models	57
4.2.3	Hot-Spot Temperature Rise in Steady State	57
4.2.4	Hot-Spot Temperature Rise in Transient State	60
4.3	The Thermoelectric Analogy Theory	60
4.4	A Comprehensive Thermoelectric Analogy Thermal Model	61
4.4.1	Heat Transfer Schematics of Transformers	61
4.4.2	Derivation of a Comprehensive Heat Equivalent Circuit	63
4.5	Parameter Estimation of a Thermoelectric Analogy Model	66
4.5.1	Heat Generation Process	66
4.5.2	Heat Transfer Parameter	66
4.5.3	Operation Scheme of Winding Temperature Indicator	67
4.5.4	Time Constant Variation in a Heat Transfer Process	67
4.6	Identification of Thermal Model Parameters	68
4.7	A Simplified Thermoelectric Analogy Thermal Model	68
4.7.1	Derivation of a Simplified Heat Equivalent Circuit	68
4.7.2	Hot-Spot Temperature Calculation	70

4.8	Summary	70
	References	71
5	Thermal Model Parameter Identification and Verification Using Genetic Algorithm	73
5.1	Introduction	73
5.2	Unit Conversion for Heat Equivalent Circuit Parameters	74
5.3	Fitness Function for Genetic Algorithm Optimisation	75
5.4	Parameter Identification and Verification for the Comprehensive Thermal Model	76
5.4.1	Estimation of Heat Transfer Parameters	76
5.4.2	Parameter Identification Using Genetic Algorithm	77
5.4.3	Verification of Identified Thermal Parameters Against Factory Heat Run Tests	79
5.4.4	Comparison between Modelling Results of Artificial Neural Network and Genetic Algorithm	82
5.5	Parameter Identification and Verification for the Simplified Thermal Model	85
5.5.1	Identification of Parameters Using Genetic Algorithm	85
5.5.2	Verification of Derived Parameters with Rapidly Changing Loads	87
5.5.3	Simulations of Step Responses Compared with Factory Heat Run	90
5.5.4	Hot-Spot Temperature Calculation	92
5.5.5	Error Analysis	93
5.6	Summary	93
	References	94
6	Transformer Condition Assessment Using Dissolved Gas Analysis	95
6.1	Introduction	95
6.2	Fundamental of Dissolved Gas Analysis	96
6.2.1	Gas Evolution in a Transformer	96
6.2.2	Key Gas Method	98
6.2.3	Determination of Combustible Gassing Rate	99
6.2.4	Gas Ratio Methods	99
6.2.5	Fault Detectability Using Dissolved Gas Analysis	100
6.3	Combined Criteria for Dissolved Gas Analysis	101
6.4	Intelligent Diagnostic Methods for Dissolve Gas Analysis	102
6.5	Summary	103
	References	104

7	Fault Classification for Dissolved Gas Analysis Using Genetic Programming.	105
7.1	Introduction	105
7.2	Bootstrap	107
7.3	The Cybernetic Techniques of Computational Intelligence	108
7.3.1	Artificial Neural Network	108
7.3.2	Support Vector Machine	109
7.3.3	K-Nearest Neighbour	109
7.4	Results and Discussions	110
7.4.1	Process DGA Data Using Bootstrap	110
7.4.2	Feature Extraction with Genetic Programming	112
7.4.3	Fault Classification Results and Comparisons	116
7.5	Summary	122
	References	123
8	Dealing with Uncertainty for Dissolved Gas Analysis	125
8.1	Introduction	125
8.2	Dissolved Gas Analysis Using Evidential Reasoning	126
8.2.1	A Decision Tree Model under an Evidential Reasoning Framework	127
8.2.2	An Evaluation Analysis Model based upon Evidential Reasoning	129
8.2.3	Determination of Weights of Attributes and Factors	131
8.2.4	Evaluation Examples under an Evidential Reasoning Framework	133
8.3	A Hybrid Diagnostic Approach Combining Fuzzy Logic and Evidential Reasoning	138
8.3.1	Solution to Crispy Decision Boundaries	139
8.3.2	Implementation of the Hybrid Diagnostic Approach	141
8.3.3	Tests and Results	150
8.4	Probabilistic Inference Using Bayesian Networks	152
8.4.1	Knowledge Transformation into a Bayesian Network	153
8.4.2	Results and Discussions	156
8.5	Summary	161
	References	162
9	Winding Frequency Response Analysis for Power Transformers	163
9.1	Introduction	163
9.2	Transformer Transfer Function	165
9.3	Frequency Response Analysis Methods	166
9.3.1	Low Voltage Impulse	166
9.3.2	Sweep Frequency Response Analysis	167

9.4	Winding Models Used for Frequency Response Analysis	168
9.5	Transformer Winding Deformation Diagnosis	168
9.5.1	Comparison Techniques	170
9.5.2	Interpretation of Frequency Response Measurements	170
9.6	Summary	174
	References	174
10	Winding Parameter Identification Using an Improved Particle Swarm Optimiser	177
10.1	Introduction	177
10.2	A Ladder Network Model for Frequency Response Analysis	178
10.3	Model-Based Approach to Parameter Identification and its Verification	179
10.3.1	Derivation of Winding Frequency Responses	179
10.3.2	Fitness Function Used by PSOPC	180
10.4	Simulations and Discussions	180
10.4.1	Test Simulations of Frequency Response Analysis	181
10.4.2	Winding Parameter Identification	181
10.4.3	Results and Discussions	182
10.5	Summary	183
	References	183
11	Evidence-Based Winding Condition Assessment	185
11.1	Knowledge Transformation with Revised Evidential Reasoning Algorithm	185
11.2	A Basic Evaluation Analysis Model	186
11.3	A General Evaluation Analysis Model	187
11.4	Results and Discussions	188
11.4.1	An Example Using the Basic Evaluation Analysis Model	188
11.4.2	Aggregation of Subjective Judgements Using the General Evaluation Analysis Model	192
11.5	Summary	193
	References	194
	Appendix: A Testing to BS171 for Oil-Immersed Power Transformers	195
	Index	197

Condition Monitoring and Assessment of Power
Transformers Using Computational Intelligence

Tang, W.H.; Wu, Q.H.

2011, XVIII, 202 p., Hardcover

ISBN: 978-0-85729-051-9
