
Contents

1	Introduction	1
2	Bose systems	7
2.1	Generalities	7
2.2	CCR and boson fields	10
2.3	States and Quasi-Free States	12
3	Equilibrium States	27
3.1	Variational Principle	27
3.2	Energy-Entropy Balance Criterion	31
3.3	Variational Principle for Solvable Models	37
4	Bose Einstein Condensation (BEC)	43
4.1	Introductory Remarks	43
4.2	Free Boson Gas and BEC	44
4.2.1	Standard BEC	45
4.2.2	Thermodynamic Limit and Boundary Conditions	49
4.3	BEC in Interacting Boson Gases	52
4.3.1	Mermin-Wagner Argument	53
4.3.2	Spontaneous Symmetry Breaking (SSB) and BEC	55
4.3.3	Condensate Equations	74
4.4	Mean Field Bose Gas	81
4.5	Super-radiance and Matter Wave Amplification	85
4.6	Theory of Bogoliubov	89
4.7	Condensation in Two-body Fully Interacting Models	96
4.8	BEC in Traps	99
4.8.1	Free Boson Gas in an Harmonic Potential	100
4.8.2	Interacting Bosons in Traps	104

5	Boson System Dynamics	109
5.1	Reversible Dynamics	110
5.2	Irreversible Dynamics	118
6	Quantum Fluctuations and Bosonization	123
6.1	Preliminaries	123
6.2	Normal Quantum Fluctuations	130
6.3	Abnormal Quantum Fluctuations	140
6.4	Applications	145
6.4.1	Luttinger Model	145
6.4.2	Micro/macro-dynamics and Conservation of Equilibrium ...	154
6.4.3	Micro/macro-dynamics and Linear Response Theory	156
6.4.4	Micro/macro and SSB	157
7	Appendix	165
7.1	Dynamical Systems and GNS Construction	165
7.2	Dynamical Semigroups	172
7.3	Canonical Transformations	175
	References	179
	Index	187

Many-Body Boson Systems

Half a Century Later

Verbeure, A.F.

2011, X, 190 p., Hardcover

ISBN: 978-0-85729-108-0
