

Contents

1	The Fibonacci sequence (1202)	1
2	Halley's life table (1693)	5
3	Euler and the geometric growth of populations (1748–1761)	11
4	Daniel Bernoulli, d'Alembert and the inoculation of smallpox (1760) .	21
5	Malthus and the obstacles to geometric growth (1798)	31
6	Verhulst and the logistic equation (1838)	35
7	Bienaymé, Cournot and the extinction of family names (1845–1847) . .	41
8	Mendel and heredity (1865)	45
9	Galton, Watson and the extinction problem (1873–1875)	49
10	Lotka and stable population theory (1907–1911)	55
11	The Hardy–Weinberg law (1908)	59
12	Ross and malaria (1911)	65
13	Lotka, Volterra and the predator–prey system (1920–1926)	71
14	Fisher and natural selection (1922)	77
15	Yule and evolution (1924)	81
16	McKendrick and Kermack on epidemic modelling (1926–1927)	89
17	Haldane and mutations (1927)	97

18	Erlang and Steffensen on the extinction problem (1929–1933)	101
19	Wright and random genetic drift (1931)	105
20	The diffusion of genes (1937)	111
21	The Leslie matrix (1945)	117
22	Percolation and epidemics (1957)	121
23	Game theory and evolution (1973)	127
24	Chaotic populations (1974)	133
25	China’s one-child policy (1980)	141
26	Some contemporary problems	149
