Part I Black-Box Approach: Time-to-Failure Analysis

1	Lifetime Data	3
1.1	Smoothing Methods for Lifetime Data	3
1.1.1	Introduction	3
1.2	Complete Samples	4
1.3	Censored Samples	8
1.4	Density Estimation with Censored Data	10
1.5	Failure Rate Estimation	13
1.5.1	Local Linear Estimation of the Failure Rate	16
1.5.2	Spline Estimation of the Failure Rate	17
1.6	Asymmetric Kernels	19
1.7	Bandwidth Selection	21
1.7.1	Bayesian Bandwidths	25
	References	28

Part II Grey-Box Approach: Counting Processes

2	Models for Perfect Repair	33
2.1	Introduction	33
2.2	Ordinary Renewal Process	35
2.2.1	The Renewal Function	35
2.2.2	Nonparametric Estimation of the k-Fold Convolution of Distribution Functions	37
2.3	Alternating Renewal Process	45
2.3.1	Introduction and Some Applications of the ARP in Reliability	45
2.3.2	Availability Measures of a Repairable System	46

2.3.3	Nonparametric Estimation of Steady-State Availability	49
2.3.4	Smooth Estimation in the ARP	51
2.3.5	Smooth Estimation of the Availability Function	55
2.3.6	Consistency of the Bootstrap Approximation of the Availability Function	57
2.3.7	Bootstrap Estimate of the k-Fold Convolution of a Distribution Function	60
	References	62
3	Models for Minimal Repair	65
3.1	Introduction	65
3.1.1	The Concept of Minimal Repair	65
3.1.2	Basic Concepts for Counting Processes	66
3.1.3	The Model: Non-Homogeneous Poisson Process (NHPP)	69
3.2	Nonparametric Estimation of the Rate of Occurrence of Failures (Rocof)	72
3.2.1	Smooth Estimation of the Rocof	72
3.2.2	Bandwidth Selection: Least-Squares Cross-Validation	75
3.2.3	Bootstrap Confidence Bounds for Rocof	79
3.3	Recurrence Data: The Multiple Realization Setup	81
3.3.1	Estimation Procedures with Observed Failure Times	83
3.3.2	Estimation Procedures with Aggregated Data	85
3.4	Nonparametric Maximum-Likelihood Estimation of the Rocof Under Monotonicity Constraints	87
3.4.1	One Realization Setup	87
3.4.2	Multiple Realization Setup	88
	References	91
4	Models for Imperfect Repair	93
4.1	Introduction	93
4.1.1	Models for Imperfect Repair Based on Conditional Intensities	93
4.1.2	Models for Imperfect Repair Based on Effective Ages	94
4.2	The Trend-Renewal Process	96
4.2.1	Nonparametric Estimation of the Trend Function of a TRP	98
4.2.2	Nonparametric Estimation of the Trend Function Under Monotonicity Constraints	104
4.2.3	Bootstrap Methods for TRPs	108
4.3	Models Based on Effective Ages	111
4.3.1	Nonparametric Statistical Inference for the Brown–Proschan Model	111

4.3.2	Nonparametric Statistical Inference for the Peña-Hollander Model	113
4.3.3	A General Model for Imperfect Repair Based on Effective Ages	116
	References	117

Part III White-Box Approach: The Physical Environment

5	Systems with Multi-Components	121
5.1	From Binary to Continuous-State Reliability Systems	121
5.1.1	Introduction	121
5.1.2	The Structure Function	123
5.2	Monotone Regression Analysis of the Structure Function	125
5.2.1	Nonparametric Kernel Regression of the Structure Function.	126
5.2.2	The Problem of the Boundary Effect.	128
5.2.3	Data-Driven Bandwidth Selection Methods	130
5.2.4	Estimation Under Monotonicity Constraints: Isotonization Procedure	132
5.2.5	Examples	133
5.3	Estimation of Some Performance Measures	137
5.3.1	The Expected State of the System.	137
5.3.2	The Probability of Occurrence of Failures	139
	References	141
6	Reliability of Semi-Markov Systems	143
6.1	Introduction	143
6.2	Markov Renewal and Semi-Markov Processes	145
6.2.1	Definitions	145
6.2.2	Markov Renewal Theory	149
6.2.3	Nonparametric Estimation	151
6.3	Reliability of Semi-Markov Systems	153
6.3.1	Reliability Modeling	153
6.3.2	Reliability Estimation	159
6.4	Reliability in Discrete Time	164
6.4.1	Semi-Markov Chains	164
6.4.2	Reliability Modeling	166
6.5	General State Space Semi-Markov Systems	172
6.5.1	Introduction	172
6.5.2	Reliability Modeling	173

6.6	Stationary Probability Estimation and Availability.	177
6.6.1	Introduction	177
6.6.2	Weak Invariance Principle	180
6.6.3	Strong Invariance Principle	180
	References	181
7	Hazard Regression Analysis	185
7.1	Introduction: A Review of Regression Models for Lifetime Data.	185
7.1.1	The Cox Proportional Hazards Model	187
7.1.2	The Aalen Additive Model.	190
7.1.3	The Accelerated Failure Time Model	191
7.1.4	More General Models	198
7.2	Extending the Cox Proportional Hazards Model	201
7.2.1	Smoothed Estimate of the Baseline Hazard	201
7.2.2	The Generalized Additive Proportional Hazards Model	208
7.3	Nonparametric Hazard Regression.	214
7.3.1	Local Linear Smoothing of the Hazard Rate.	215
	References	223
	Index	227

Applied Nonparametric Statistics in Reliability

Gámiz, M.L.; Kulasekera, K.B.; Limnios, N.; Lindqvist, B.H.

2011, XIII, 230 p., Hardcover

ISBN: 978-0-85729-117-2
