

Contents

1	Preliminary	1
1.1	Virasoro Algebra	1
1.1.1	Universal Central Extension	2
1.1.2	Witt Algebra and its Universal Central Extension	3
1.2	Q -graded Lie Algebra	5
1.2.1	Γ -graded Vector Spaces	6
1.2.2	Definitions	7
1.2.3	Examples	9
1.2.4	Categories of $(\mathfrak{g}, \mathfrak{h})$ -modules	11
1.2.5	Some Objects of the Category $\mathcal{C}_{(\mathfrak{g}, \mathfrak{h})}^{\iota}$	13
1.2.6	Simple Objects of the Category $\mathcal{C}_{\text{adm}}$ (the Virasoro Case)	16
1.2.7	Dualising Functors	17
1.2.8	Local Composition Series and Formal Character	18
1.3	(Co)homology of a Q -graded Lie Algebra	24
1.3.1	Preliminaries	25
1.3.2	Frobenius Reciprocity	26
1.3.3	Definitions	28
1.3.4	Some Properties	31
1.4	Bernstein–Gelfand–Gelfand Duality	33
1.4.1	Preliminaries	34
1.4.2	Truncated Category	35
1.4.3	Projective Objects	36
1.4.4	Indecomposable Projective Objects	38
1.4.5	Duality Theorem	41
1.5	Bibliographical Notes and Comments	41
1.A	Appendix: Proof of Propositions 1.1, 1.2 and 1.3	42
1.B	Appendix: Alternative Proof of Proposition 1.14	45

2	Classification of Harish-Chandra Modules	47
2.1	Main Result	47
2.1.1	Notations and Conventions	47
2.1.2	Definitions	48
2.2	Partial Lie Algebras	50
2.2.1	Definition and Main Theorems	51
2.2.2	Proof of Theorem 2.2	53
2.2.3	Proof of Theorem 2.3	61
2.3	$\mathbb{Z}$ -graded Lie Algebras	64
2.3.1	$\mathbb{Z}$ -graded Modules	65
2.3.2	Correspondence between Simple $\mathbb{Z}$ -graded Modules and Simple $\mathbb{Z}/N\mathbb{Z}$ -graded Modules	68
2.3.3	R -forms	72
2.4	Lie p -algebra $W(m)$	73
2.4.1	Definitions	73
2.4.2	Preliminaries	75
2.4.3	Irreducible Representations of $W(m)$ ($m \geq 2$)	80
2.4.4	Irreducible Representations of $W(1)$	82
2.4.5	$\mathbb{Z}/N\mathbb{Z}$ -graded Modules over $\text{Vir}_{\mathbb{K}}$	86
2.5	Proof of the Classification of Harish-Chandra Modules	90
2.5.1	Structure of Simple $\mathbb{Z}$ -graded Modules	90
2.5.2	Semi-continuity Principle	91
2.5.3	Proof of Theorem 2.1	92
2.6	Bibliographical Notes and Comments	96
2.A	Appendix: Indecomposable $\mathbb{Z}$ -graded Vir-Modules with Weight Multiplicities 1	97
2.A.1	Definition of $A(\alpha)$ and $B(\beta)$	97
2.A.2	Classification Theorem	98
3	The Jantzen Filtration	101
3.1	Motivation	102
3.1.1	Shapovalov Forms	102
3.1.2	Contravariant Forms	103
3.1.3	What is the Jantzen Filtration?	105
3.2	The original Jantzen Filtration	106
3.2.1	Integral Form	106
3.2.2	Definitions	109
3.2.3	Basic Properties	110
3.2.4	Character Sum	112
3.3	The Jantzen Filtration à la Feigin and Fuchs I	114
3.3.1	Definitions and Properties	114
3.3.2	Character Sum	116
3.3.3	Duality	118
3.4	The Jantzen Filtration à la Feigin and Fuchs II	119
3.4.1	Notation	119

3.4.2	Definitions and Properties	120
3.5	The Jantzen Filtration of Quotient Modules	122
3.6	Bibliographical Notes and Comments	123
4	Determinant Formulae	125
4.1	Vertex (Super)algebra Structures associated to Bosonic Fock Modules	125
4.1.1	Definitions and Notation	126
4.1.2	Vertex Operator Algebra $\mathcal{F}^0$	127
4.1.3	Vertex Operator Superalgebra $V_{\sqrt{N}\mathbb{Z}}$	128
4.2	Isomorphisms among Fock Modules	129
4.2.1	Notation	129
4.2.2	Isomorphisms arising from Automorphisms of $\mathcal{H}$	130
4.2.3	Isomorphisms related to the Contragredient Dual	131
4.3	Intertwining Operators	133
4.3.1	Vertex Operator $V_\mu(z)$	133
4.3.2	Criterion for Non-Triviality	134
4.4	Determinants of Verma Modules	137
4.4.1	Definitions and Formulae	137
4.4.2	Proof of Theorem 4.2	138
4.5	Determinants of Fock Modules	142
4.5.1	Definitions and Formulae	143
4.5.2	Proof of Theorem 4.3	145
4.6	Bibliographical Notes and Comments	148
5	Verma Modules I: Preliminaries	149
5.1	Classification of Highest Weights	149
5.1.1	Strategy of Classification	150
5.1.2	Bijection between $\tilde{D}(c, h)$ and Integral Points on $\ell_{c,h}$	153
5.1.3	List of Integral Points of $\ell_{c,h}$	155
5.1.4	Fine Classification of Highest Weights: Class R^+	160
5.1.5	Special Highest Weights	163
5.1.6	Fine classification of Highest Weights: Class R^-	164
5.2	Singular Vectors	166
5.2.1	Uniqueness of Singular Vectors	167
5.2.2	Existence of Singular Vectors	170
5.3	Embedding Diagrams of Verma Modules	172
5.3.1	Embedding Diagrams	172
5.3.2	Proof of Propositions 5.4 and 5.5	174
5.4	Singular Vector Formulae	175
5.4.1	Formula <i>I</i>	176
5.4.2	Formula <i>II</i>	177
5.4.3	Proof of Formula <i>I</i>	177
5.5	Character Sums of Jantzen Filtration of Verma Modules	184
5.5.1	Notation	184

5.5.2	Character Sum Formula	185
5.5.3	Explicit Forms	187
5.6	Character Sums of the Jantzen Filtration of Quotient Modules	188
5.6.1	Integral Forms of Quotient Modules	189
5.6.2	Definition	190
5.6.3	Character Sum Formula	192
5.6.4	Explicit Forms	198
5.7	Bibliographical Notes and Comments	199
5.A	Appendix: Integral Points on $\ell_{c,h}$	200
6	Verma Modules II: Structure Theorem	209
6.1	Structures of Jantzen Filtration	209
6.1.1	Class V and Class I	209
6.1.2	Class R^+	210
6.1.3	Proof of (i) in Theorem 6.3	212
6.1.4	Proof of (ii) and (iv) in Theorem 6.3	214
6.1.5	Proof of (iii) in Theorem 6.3	215
6.1.6	Class R^-	216
6.2	Structures of Verma Modules	219
6.2.1	Main Results	219
6.2.2	Proof of Theorems 6.5 and 6.6	220
6.3	Bernstein–Gelfand–Gelfand Type Resolutions	221
6.3.1	Class V and Class I	221
6.3.2	Class R^+	222
6.3.3	Class R^-	223
6.4	Characters of Irreducible Highest Weight Representations	224
6.4.1	Normalised Character	224
6.4.2	Characters of the Irreducible Highest Weight Representations	225
6.4.3	Multiplicity	228
6.4.4	Modular Transformation	229
6.4.5	Asymptotic Dimension	232
6.5	Bibliographical Notes and Comments	236
7	A Duality among Verma Modules	237
7.1	Semi-regular Bimodule	237
7.1.1	Preliminaries	237
7.1.2	Semi-infinite Character	239
7.1.3	Definition	244
7.1.4	Compatibility of Two Actions on $S_\gamma(\mathfrak{g})$	246
7.1.5	Isomorphisms	252
7.2	Tilting Equivalence	253
7.2.1	Preliminaries	253
7.2.2	Some Categories	255

7.2.3	Some Functors	257
7.2.4	Equivalence between $\mathcal{M}$ and $\mathcal{K}$	260
7.2.5	The Virasoro Case	262
7.3	Bibliographical Notes and Comments	263
8	Fock Modules	265
8.1	Classification of Weights (λ, η)	265
8.1.1	Coarse Classification	265
8.1.2	Fine Classification: Class R^+	267
8.1.3	Zeros of $\det(\Gamma_{\lambda, \eta})_n$	269
8.2	The Jantzen (Co)filtrations of Fock Modules	270
8.2.1	Contragredient Dual of $\mathfrak{g}_{\mathcal{R}}$ -Modules	270
8.2.2	Fock Modules over $\mathfrak{g}_{\mathcal{R}}$	270
8.2.3	The Jantzen (Co)filtrations defined by $\Gamma_{\lambda, \eta}$ and $L^{\lambda, \eta}$	271
8.2.4	Character Sum Formula	272
8.2.5	Structures of the Jantzen Filtrations defined by $\Gamma_{\tilde{\lambda}, \tilde{\eta}}$ and $L^{\tilde{\lambda}, \tilde{\eta}}$	273
8.2.6	Singular Vectors and $M(c, \xi_i)(n)$	274
8.2.7	Cosingular Vectors and $M(c, \xi_i)^c[n]$	276
8.3	Structure of Fock Modules (Class R^+)	278
8.3.1	Main Theorem (Case 1^+)	278
8.3.2	Main Theorem (Case 2^+ and 3^+)	282
8.3.3	Main Theorem (Case 4^+)	285
8.3.4	Classification of Singular Vectors	286
8.4	Jack Symmetric Polynomials and Singular Vectors	287
8.4.1	Completion of Fock Modules and Operators	287
8.4.2	Screening Operators	288
8.4.3	Non-Triviality of Screening Operators	290
8.4.4	Jack Symmetric Polynomials	292
8.4.5	Singular Vectors of Fock Modules	294
8.5	Spaces of Semi-infinite Forms and Fock Modules	300
8.5.1	Space of Semi-infinite Forms	300
8.5.2	Clifford Algebra and Fermionic Fock Modules	301
8.5.3	Isomorphism between $\bigwedge^{\frac{\infty}{2} + \bullet} V_{a,b}^{\sharp}$ and $\mathcal{F}_{a,b}^c$	304
8.5.4	Boson–Fermion Correspondence	305
8.6	Bibliographical Notes and Comments	308
8.A	Appendix: Another Proof of Theorem 8.8	308
8.B	Appendix: List of the Integral Points on $\ell_{\lambda, \eta}^{\pm}$	317
9	Rational Vertex Operator Algebras	319
9.1	Vertex Operator Algebra Structure	319
9.2	The Zhu Algebra of V_c	321
9.2.1	Preliminary	321
9.2.2	$A(V_c)$	323

9.3	Rationality and the Fusion Algebra of BPZ Series	327
9.3.1	Coinvariants <i>I</i>	327
9.3.2	Rationality of $L(c, 0)$	330
9.3.3	Fusion Algebra	333
9.4	Characterisations of BPZ Series	338
9.4.1	Coinvariants <i>II</i>	338
9.4.2	Lisse Modules	339
9.4.3	Finiteness Condition	340
9.5	Bibliographical Notes and Comments	342
9.A	Appendix: Associated Variety	342
9.A.1	Filtration	342
9.A.2	Associated Variety	344
9.A.3	Involutivity	345
9.B	Appendix: Tauberian Theorem	346
10	Coset Constructions for $\hat{\mathfrak{sl}}_2$	349
10.1	Admissible Representations	349
10.1.1	Affine Lie Algebra $\hat{\mathfrak{sl}}_2$	349
10.1.2	Admissible Representations	352
10.2	Sugawara Construction	355
10.2.1	Vertex Algebra Structure of Vacuum $\hat{\mathfrak{sl}}_2$ -modules	355
10.2.2	Segal–Sugawara Operator	356
10.3	Coset Constructions	357
10.3.1	Fundamental Characters of $\hat{\mathfrak{sl}}_2$	358
10.3.2	Coset $(\hat{\mathfrak{sl}}_2)_1 \times (\hat{\mathfrak{sl}}_2)_k / (\hat{\mathfrak{sl}}_2)_{k+1}$	360
10.3.3	Properties of the Theta Function and Proof of Lemma 10.5	363
10.3.4	Level 1 $\hat{\mathfrak{sl}}_2$ -modules as $\text{Vir} \oplus \mathfrak{sl}_2$ -module	367
10.4	Unitarisable Vir-modules	368
10.4.1	Unitarisable Representations of $\hat{\mathfrak{sl}}_2$	368
10.4.2	Unitarisable Representations of Vir	369
10.5	Bibliographical Notes and Comments	370
11	Unitarisable Harish-Chandra Modules	371
11.1	Definition of Unitarisable Representations	371
11.2	Anti-linear Anti-involutions of Vir	373
11.2.1	The Classification	373
11.2.2	Anti-linear Anti-involutions admitting Unitarisable Vir-Modules	375
11.3	Hermitian Form on Harish-Chandra Modules	376
11.3.1	Intermediate Series	376
11.3.2	Verma Modules	378
11.4	Main Results	379
11.5	Proof of Main Results	380

11.5.1	Determinant Formulae	381
11.5.2	Proof of Theorem 11.1	382
11.6	Bibliographical Notes and Comments	397
A	Homological Algebras	399
