## Part I Global Analysis

<b>1</b>	<b>Manifolds and Related Objects</b> .....	3
1.1	Manifolds, Vectors and Covectors. A Glossary .....	3
1.2	Lie Groups and Lie Algebras .....	11
1.3	Fiber Bundles .....	14
1.4	Riemannian and Semi-Riemannian Metrics .....	18
1.5	Tensors .....	21
1.6	Differential Forms and Polyvectors .....	25
1.7	The Lie Derivative .....	32
<b>2</b>	<b>Connections</b> .....	35
2.1	The Structure of a Tangent Bundle to a Vector Bundle .....	35
2.2	Connections on Vector Bundles .....	40
2.3	Connections on Manifolds .....	50
2.4	Geodesics .....	53
2.5	Curvature and Torsion Tensors .....	55
2.6	Riemannian Connections. The Levi-Civita Connection .....	56
2.7	Connections on Principal Bundles .....	60
2.8	A Connection on the Total Space of a Vector Bundle .....	64
2.9	Second Order Tangent Vectors and Connections .....	65
<b>3</b>	<b>Ordinary Differential Equations</b> .....	67
3.1	Global in Time Existence of Solutions of Ordinary Differential Equations .....	67
3.1.1	A necessary and sufficient condition for completeness of a vector field of one-sided type .....	67
3.1.2	A generalization to the infinite-dimensional case .....	70
3.1.3	A necessary and sufficient condition for completeness of a vector field of two-sided type .....	82
3.1.4	Some sufficient conditions .....	84

3.2	Integral Operators with Parallel Translation .....	86
3.2.1	The operator $\mathcal{S}$ .....	86
3.2.2	The operator $\Gamma$ .....	89
3.2.3	Integral operators .....	90
3.3	Second Order Differential Equations (Special Vector Fields) ..	92
<b>4</b>	<b>Elements of the Theory of Set-Valued Mappings .....</b>	<b>97</b>
4.1	Set-Valued Mappings and Differential Inclusions .....	97
4.2	Special Approximations .....	100
<b>5</b>	<b>Analysis on Groups of Diffeomorphisms .....</b>	<b>105</b>
5.1	General Concepts .....	105
5.2	The Group of Diffeomorphisms of a Flat Torus .....	111
 <b>Part II Stochastic Analysis</b>		
<b>6</b>	<b>Essentials from Stochastic Analysis in Linear Spaces .....</b>	<b>115</b>
6.1	Some Definitions from Probability Theory and the Theory of Stochastic Processes .....	115
6.1.1	Stochastic processes. Cylinder sets .....	115
6.1.2	Conditional expectation .....	117
6.1.3	Markov processes .....	118
6.1.4	Martingales and semi-martingales .....	118
6.1.5	Weak convergence of probability measures .....	119
6.2	A Survey on Stochastic Integrals and Equations .....	120
6.2.1	White noise and Wiener processes .....	120
6.2.2	Stochastic integrals .....	123
6.2.3	Stochastic differential equations .....	128
6.3	Stochastic Flows and their Generators .....	135
<b>7</b>	<b>Stochastic Analysis on Manifolds .....</b>	<b>139</b>
7.1	Stochastic Differential Equations in Stratonovich Form on a Manifold .....	139
7.1.1	General construction .....	139
7.1.2	Riemannian uniform atlases .....	143
7.2	The Itô Bundle and Itô Equations on a Manifold .....	146
7.3	Itô Equations in Belopolskaya-Daletskii Form .....	151
7.4	Completeness of Stochastic Flows .....	158
7.4.1	Setting up the problem and a necessary condition for completeness .....	158
7.4.2	A necessary and sufficient condition for completeness of flows continuous at infinity .....	159
7.4.3	Remarks on $L^1$ -complete stochastic flows .....	163
7.5	A Condition for Weak Compactness of Measures Corresponding to Solutions of Stochastic Differential Equations .....	164

7.6	Stochastic Development and Parallel Translation .....	168
7.6.1	The Eells-Elworthy and Itô developments .....	168
7.6.2	Wiener processes on Riemannian manifolds. Stochastic completeness .....	172
7.6.3	Parallel translation along a stochastic process. Itô processes on manifolds .....	176
7.7	The Integral Approach to Stochastic Differential Equations on Manifolds .....	177
7.7.1	General constructions .....	177
7.7.2	Stochastic differential equations in terms of Wiener processes in tangent spaces .....	182
7.7.3	Equations with unit diffusion coefficients .....	184
<b>8</b>	<b>Mean Derivatives in Linear Spaces</b> .....	187
8.1	General Definitions and Results .....	187
8.2	Calculation of Mean Derivatives for a Wiener Process and for Diffusion Processes .....	199
8.3	Calculation of Mean Derivatives for Itô Processes .....	203
8.4	First Order Differential Equations and Inclusions with Mean Derivatives .....	209
8.5	The Case of $\mathcal{P}$ -mean Derivatives .....	220
<b>9</b>	<b>Mean Derivatives on Manifolds</b> .....	225
9.1	Forward and Backward Mean Derivatives .....	225
9.2	Current and Osmotic Velocities .....	230
9.3	Mean Derivatives of Vector Fields Along Stochastic Processes .....	232
9.4	The Quadratic Mean Derivative .....	234
9.5	Mean Derivatives of Itô Processes on Manifolds .....	237
9.6	Equations and Inclusions with Mean Derivatives .....	239
9.7	Stochastic Differential Inclusions in Terms of Infinitesimal Generators .....	243
<b>10</b>	<b>Stochastic Analysis on Groups of Diffeomorphisms</b> .....	247
10.1	The General Case .....	247
10.2	The Case of a Flat Torus .....	249
<b>Part III Applications to Mathematical Physics</b>		
<b>11</b>	<b>Newtonian Mechanics</b> .....	255
11.1	A Geometric Language for Newtonian Mechanics .....	255
11.2	Mechanical Systems on Lie Groups .....	257
11.3	Conservative Mechanical Systems .....	258
11.4	Hamilton's Principle of Least Action .....	260
11.5	Noether's Theorem .....	263
11.6	Geometric Mechanics with Linear Constraints .....	266
11.6.1	The notion of a linear mechanical constraint .....	267

11.6.2	Reduced connections . . . . .	268
11.6.3	Length minimizing and least constrained non-holonomic geodesics . . . . .	269
11.7	Mechanical Systems with Discontinuous Forces and Systems with Control. Differential Inclusions . . . . .	271
11.8	Integral Equations of Geometric Mechanics. The Velocity Hodograph . . . . .	275
11.8.1	General constructions . . . . .	275
11.8.2	An integral formalism of geometric mechanics with constraints . . . . .	277
11.9	Mechanical Interpretation of Parallel Translation and Systems with Delayed Control Forces . . . . .	278
<b>12</b>	<b>Accessible Points and Sub-Manifolds of Mechanical Systems. Controllability . . . . .</b>	<b>283</b>
12.1	Discussion of the Problem . . . . .	283
12.2	Examples of Points that Cannot be Connected by a Trajectory . . . . .	285
12.3	Existence of Solutions . . . . .	288
12.4	Generalizations to Systems with Constraints . . . . .	297
<b>13</b>	<b>Some Problems on Lorentz Manifolds . . . . .</b>	<b>299</b>
13.1	Introduction to Relativity Theory . . . . .	299
13.1.1	Space-times . . . . .	299
13.1.2	World lines. The light cone. Proper time . . . . .	303
13.1.3	Reference frames and 3-dimensional notions . . . . .	305
13.1.4	Some consequences . . . . .	308
13.1.5	The electromagnetic field . . . . .	312
13.1.6	Gravitational fields . . . . .	314
13.2	A Two-Point Boundary Value Problem on a Lorentz Manifold Arising in A. Poltorak's Concept of Reference Frame . . . . .	316
13.2.1	Discussion of the problem . . . . .	316
13.2.2	The reference frame with flat connection . . . . .	318
13.2.3	The reference frame with Riemannian connection . . . . .	321
13.3	A Classical Particle in a Classical Gauge Field . . . . .	324
13.3.1	A brief introduction to gauge fields and some preliminary constructions . . . . .	325
13.3.2	The equation of motion . . . . .	328
<b>14</b>	<b>Mechanical Systems with Random Perturbations . . . . .</b>	<b>331</b>
14.1	Setting Up the Problem . . . . .	331
14.2	The Langevin Equation and Ornstein-Uhlenbeck Processes on Manifolds . . . . .	333
14.3	Set-Valued Forces. Langevin Type Inclusions . . . . .	342
14.4	Systems with Random Perturbation of Velocity . . . . .	348

<b>15 The Newton-Nelson Equation</b> .....	355
15.1 Stochastic Mechanics in $\mathbb{R}^n$ .....	356
15.1.1 Principal ideas of Nelson's stochastic mechanics .....	356
15.1.2 Existence theorems .....	360
15.2 The Geometric Form of Stochastic Mechanics .....	367
15.2.1 Some comments on stochastic mechanics on Riemannian manifolds .....	367
15.2.2 Existence theorems .....	369
15.3 Relativistic Stochastic Mechanics .....	376
15.3.1 Stochastic mechanics in Minkowski space .....	376
15.3.2 Stochastic mechanics in the space-times of general relativity .....	383
<b>16 Hydrodynamics</b> .....	387
16.1 The Lagrangian Formalism of the Hydrodynamics of an Ideal Barotropic Fluid .....	387
16.1.1 Diffuse matter .....	387
16.1.2 A barotropic fluid .....	389
16.2 Lagrangian Hydrodynamical Systems of an Ideal Incompressible Fluid .....	392
16.3 The Regularity Theorem and a Review of Results on the Existence of Solutions .....	395
16.4 Description of Deterministic Viscous Hydrodynamics Via a Stochastic Version of Newton's Law on Groups of Diffeomorphisms .....	402
16.4.1 General construction .....	402
16.4.2 Solutions of Burgers, Reynolds and Navier-Stokes equations via stochastic perturbations of inviscid flows .....	408
<b>References</b> .....	415
<b>Index</b> .....	427

Global and Stochastic Analysis with Applications to  
Mathematical Physics

Gliklikh, Y.E.

2011, XXIV, 436 p., Hardcover

ISBN: 978-0-85729-162-2
