I Graded Free Resolutions

1. Graded polynomial rings	1
2. Graded modules and homomorphisms	5
3. Graded complexes	12
4. Free resolutions	16
5. Resolving, that is, Repeatedly Solving	21
6. Homotopy	23
7. Minimal free resolutions	28
8. Encoding the structure of a module	32
9. Proof of Theorem 7.5(2)	33
10. Syzygies	38
11. Betti numbers	39
12. Graded Betti numbers	41
13. The connecting homomorphism	44
14. The Koszul complex	48
15. Finite projective dimension	55
16. Hilbert functions	59
17. Pure resolutions	67
18. Regularity	73
19. Truncation	80
20. Regular elements	82
21. Polarization	85
22. Deformations from Gröbner basis theory	90
23. Computing a graded free resolution	96
24. Short resolutions	98
25. Cohen-Macaulay and Gorenstein ideals	99
26. Multigradings and Taylor's resolution	101
27. Mapping cones	106

28.	The Eliahou-Kervaire resolution	109
29.	Applications of Eliahou-Kervaire's resolution	118
30.	Double complexes	123
31.	DG algebras	124
32.	Two resolutions	127
33.	Betti numbers of infinite free resolutions	130
34.	Koszul rings	131
35.	Rate	136
36.	Topological tools	138
37.	Appendix: Tools from homological algebra	150
38.	Appendix: Tor and Ext	152
39.	Appendix: Gröbner basis	154

II Hilbert Functions

40.	Notation	159
41.	Lex ideals	160
42.	Compression	163
43.	Multicompression	166
44.	Green's Theorem	169
45.	Proofs of Macaulay's Theorem	175
46.	Compression ideals	176
47.	Ideals with a fixed Hilbert function	178
48.	Gotzmann's Persistence Theorem	183
49.	Numerical versions	187
50.	Hilbert functions over quotient rings	193
51.	Squarefree ideals plus squares	195
52.	Clements-Lindström rings	201
53.	The Eisenbud-Green-Harris Conjecture	203

III Monomial Resolutions

54.	Examples and Notation	205
55.	Homogenization and dehomogenization	208

56. Subresolutions	213
57. Simplicial and cellular resolutions	218
58. The lcm-lattice	225
59. The Scarf complex	230
60. Rootings and Lyubeznik's resolution	235
61. Betti numbers via simplicial complexes	237
62. The Stanley-Reisner correspondence	239
63. Quadratic monomial ideals	249
64. Infinite free monomial resolutions	251

IV Syzygies of Toric Ideals

65. Basics and Notation	255
66. Examples	262
67. Betti numbers via simplicial complexes	265
68. Projective dimension	270
69. The Scarf complex	271
70. Generic toric ideals	275
71. The Lawrence lifting	278
72. Hilbert functions	279
73. Infinite free resolutions	281
74. Koszul toric rings	285
