

Contents

Part I Parameter Estimation

1	Probability Distributions	3
1.1	The Maxwell Distribution	3
1.2	Probability Distributions in Phase Space	4
1.3	The Boltzmann-Gibbs Distribution	5
1.4	A Gas of Particles in the Canonical Ensemble	6
1.5	Additional Conserved Quantities	8
1.6	The Grand-Canonical Ensemble	10
1.7	Quantum Statistics	12
1.8	The von Neumann Density Operator	14
1.9	Fermi-Dirac and Bose-Einstein Distributions	16
	Problems	18
	Notes	19
	Objectives	20
	References	20
2	Statistical Models	21
2.1	Parameter Estimation	21
2.2	Definition of a Statistical Model	23
2.3	The Exponential Family	25
2.4	Curved Exponential Families	27
2.5	Example: The Ising Model in $d=1$	29
2.6	The Density of States	31
2.7	The Quantum Exponential Family	32
	Problems	34
	Notes	36
	Objectives	36
	References	36

3	Thermodynamic Equilibrium	37
3.1	Thermodynamic Configuration Space	37
3.2	Maximum Entropy Principle	38
3.3	BGS Entropy Functional	39
3.4	Applying the Method of Lagrange	41
3.5	Thermodynamic Entropy	42
3.6	Relative Entropy	44
3.7	Thermodynamic Stability	45
3.8	Entropy of Probability Densities	47
3.9	Quantum Entropies	47
	Problems	49
	Notes	50
	Objectives	51
	References	51
4	The Microcanonical Ensemble	53
4.1	Introduction	53
4.2	The Ergodic Theorem	54
4.3	Example: The Harmonic Oscillator	55
4.4	Definition	56
4.5	Microcanonical Instabilities	57
4.6	The Quantum Microcanonical Ensemble	62
4.7	The Coherent State Ensemble	64
	Problems	65
	Notes	66
	Objectives	67
	References	67
5	Hyperensembles	69
5.1	Introduction	69
5.2	The Canonical Ensemble	70
5.3	Superstatistics	71
5.4	The Hyperensemble	74
5.5	Properties of the Hyperensemble	75
	Notes	77
	Objectives	78
	References	78
6	The Mean Field Approximation	79
6.1	The Ideal Paramagnet	79
6.2	The Mean Field Equation	81
6.3	Phase Transitions	82
6.4	A Mean Field Phase Transition	83
6.5	A Hyperensemble of Product States	86
6.6	Generalised Mean Field Theories	86

6.7 The Quantum Case	89
Notes	91
Objectives	91
References	91

Part II Deformed Exponential Families

7 q-Deformed Distributions	95
7.1 q-Deformed Exponential and Logarithmic Functions	95
7.2 Dual Definitions	97
7.3 The q-Exponential Family	98
7.4 Escort Probabilities	100
7.5 q-to-1/q Duality and Escort Families	101
7.6 Dual Identities	102
7.7 The q-Gaussian Distribution	103
7.8 Configurational Probability Distribution	106
7.9 Average Kinetic Energy	108
7.10 The Quantum Family	109
Problems	110
Notes	112
Objectives	113
References	113
8 Tsallis' Thermostatistics	115
8.1 The Tsallis Entropy Functional	115
8.2 A Historical Reflection	117
8.3 Maximising the Tsallis Entropy Functional	118
8.4 Thermodynamic Properties	119
8.5 Example: The Two-Level Atom	121
8.6 Relative Entropy of the Csiszár Type	123
8.7 Relative Entropy of the Bregman Type	124
8.8 Quantum Expressions	127
8.9 More General Entropies	127
Problems	128
Notes	129
Objectives	129
References	130
9 Changes of Scale	131
9.1 Kolmogorov-Nagumo Averages	131
9.2 Rényi's Alpha Entropies	132
9.3 Rényi or Tsallis?	133
9.4 Configurational Temperature	135
9.5 Fractal Dimensions	137
9.6 Microcanonical Description	140

9.7	Sharma-Mittal Entropy Functional	143
9.8	Zipf's Law	145
	Problems	146
	Notes	147
	Objectives	147
	References	148
10	General Deformations	149
10.1	Deformed Exponential and Logarithmic Functions	149
10.2	Dual Definitions	150
10.3	Deduced Logarithms	151
10.4	The Phi-Exponential Family	153
10.5	Escort Probabilities	153
10.6	Method to Test Phi-Exponentiality	155
10.7	Example: The Site Percolation Problem	157
10.8	Generalised Quantum Statistics	160
	Problems	161
	Notes	162
	Objectives	162
	References	162
11	General Entropies	165
11.1	The Entropy Functional	165
11.2	Relative Entropies	166
11.3	The Variational Principle	167
11.4	Complexity	169
11.5	Application to q-Deformed Distributions	170
11.6	Deformed Fisher Information	171
11.7	Quantum Entropies	173
11.8	Quantum Stability	174
	Problems	176
	Notes	177
	Objectives	177
	References	178
	Solutions to the Problems	179
	Index	199

Generalised Thermostatistics

Naudts, J.

2011, XI, 201 p., Hardcover

ISBN: 978-0-85729-354-1
