

Contents

Part I The Problems of Healthcare Infrastructure

1 The Evolution of Healthcare Infrastructure	3
1.1 Scalable Infrastructure for Volume and Variation	4
1.2 Physical Volume via Provider Pyramids (Transportation Infrastructure for Railroads)	10
1.3 Logical Variation via Provider Protocols (Communication Infrastructure for Telephones)	13
1.4 Transition Points of Inevitable Evolution (Banking Infrastructure from Station to Point)	16
1.5 Healthcare Infrastructure Pre-transition (Acute Care)	19
1.6 Healthcare Infrastructure Post-transition (Chronic Care)	21
2 History of Health Determinants	25
2.1 Measuring Individuals and Populations via Personal Medicine and Public Health	25
2.2 India and the Rise of Systems: Concepts and Categories.	28
2.3 China and the Structure of Humours: Yin and Yang (Volume and Variation).	31
2.4 The Greeks and the Humours Defined: Hygeia Versus Panakeia.	32
2.5 The Roman Systemization of Galen: Infrastructure Succeeds	36
2.6 Plague and the Collapse of Society: Infrastructure Fails	40
3 Public Health Success When Simple	43
3.1 Population Records and Disease Census	43
3.2 Simple Works Since Can Localize, e.g. Infectious Cholera and Water Pump	47
3.3 Complex Works if Global Changes do, e.g. Tuberculosis and Sanitation.	50
3.4 Simple Solutions: Infectious Diseases Contained by Scientific Vaccines.	54
3.5 Risk Factors Discovered by Framingham Study: Hypertension and Stroke	55
3.6 Risk Factors: Smoking Cigarettes and Lung Cancer	57

4 Public Health Failure When Complex	59
4.1 Population Statistics and MetLife	59
4.2 Causation Versus Correlation, Confusing Cause and Effect	63
4.3 Infectious Agents: H1N1 and MRSA (Simple Water Pump Fails)	66
4.4 Immune Diseases: AIDS and DRTB (Simple Sanitation Fails)	69
4.5 Risk Factors: Cholesterol and Obesity (Complex Measurements)	72
5 Medicine Success When Simple	77
5.1 Disease Categories: Anatomy Localization (Static)	77
5.2 Disease Progressions: Physiology Thresholds (Dynamic)	81
5.3 Hierarchical Infrastructure for Trauma Surgery	84
5.4 Major Past Deaths from Dropsy: Kidney Diseases and Treatments	88
5.5 Major Present Deaths: Heart Diseases from AF to CHF	92
6 Medicine Failure When Complex	95
6.1 Comparative Medicine and Clinical Evidence	95
6.2 Randomized Clinical Trials and Correlation Strength	99
6.3 Medicine and Health: Pharma Drugs Vioxx and Rezulin	103
6.4 Middle Medicine-Health Bridge: Bone Marrow Transplant and Silicon Breast Implant	105
6.5 Middle Health-Medicine Bridge: Estrogen Replacement and Prostate Screening	110
6.6 Health and Medicine: Back Pain Beyond Physical to Mental and Social	112
7 Medical Records for Health Systems	115
7.1 Electronic Medical Records and Disease Classifications	116
7.2 Regional Health Networks and National Healthcare Infrastructure (ONC)	120
7.3 Interaction Discovery and Laboratory Demographics: The Limitations of EMR Mining	123
7.4 Personal Health Records from Medicine and Health Together	126
7.5 The Pyramid from Clinics to Hospitals Expanding at the Bottom	130
 Part II The Solutions of Healthcare Infrastructure	
8 Health Determinants for Individuals and Populations	137
8.1 The Five Rings of Human Health	137
8.2 Determinants of Population Health, Rings 3–5	143
8.3 Determinants of Individual Health, Rings 1–3	145

8.4	Models for Major Categories of Health	148
8.5	From Measurement to Management with New Technologies	150
9	Measurement of Individual Activity (Explicit Text)	153
9.1	Measuring Quality of Life (QOL)	154
9.2	Physical Measurement (Body and Mobility)	157
9.3	Mental Measurement (Memory and Behavior)	160
9.4	Psychological Measurement: From Questions to Diaries (Life)	162
9.5	Physiological Measurement: From Labtests to Monitors (Time).	169
10	Sensors for Individual Ability (Implicit Data)	173
10.1	Measurement Frequency and Status Severity (Rings and Sensors)	174
10.2	Biology Inside the Body, Sensors for Heart and Lungs Outside the Hospital (Ring 1).	177
10.3	Body Metabolism and Individual Mobility Sensors for Internal Mechanics (Ring 2).	179
10.4	Monitoring of Behavior and Stress, Nutrition and Exercise for External Balances (Ring 3)	183
10.5	Social Interactions and Smart Homes for Sensory Perception in Populations (Rings 4 and 5).	185
11	Genomes for Individual Ability (Features).	189
11.1	Personalized Medicine: Screening and Stratification for Every Individual (NIH).	189
11.2	Cellular Demographics and the Limitations of P4 Medicine.	193
11.3	Cancer: Prostate Screening and Breast Cancer Incidence	199
11.4	Heart: Warfarin Tolerance and Atrial Fibrillation	203
11.5	Heart Disease: Congestive Heart Failure and Genome (GWAS) Failures.	206
12	Networks for Population Function (Persons)	211
12.1	Measurement of Social Network: Interactions.	212
12.2	Measurement of Life Conditions: Stresses.	214
12.3	The Rise of Social Epidemiology.	218
12.4	Social Networks and FaceBook Friends	220
12.5	Living Conditions and Message Groups	223
13	Mobile Monitors for Health Systems	229
13.1	Capturing Everyday Life with Internet Health Monitors.	230
13.2	Monitor Devices Attached for Metabolism and Mobility (Ring 2)	235
13.3	Mobile Devices Carried for Nutrition and Exercise (Ring 3)	237
13.4	Personal Narratives for Interactions and Conditions (Ring 4).	240
13.5	The New Pyramid from Home Computers to Store Clinics via rfids.	243

14 The Future of Healthcare Infrastructure 247

14.1 Population Cohorts Guide Individual Management. 247

14.2 Managed Expectations with IT Case Studies. 251

14.3 New Public Health: Deeper Risk Surveillance, More Features 255

14.4 New Personal Medicine: Broader Clinical Trials, More Persons. 257

14.5 Health Systems for Populations at Level
of Individuals (IT = PH + MD) 263
