Foreword	IX
----------------	----

Part I Introduction to a topological study of Landau singularities

Introduction	3
I Differentiable manifolds	7
1 Definition of a topological manifold	7
2 Structures on a manifold	7
3 Submanifolds	10
4 The tangent space of a differentiable manifold	12
5 Differential forms on a manifold	17
6 Partitions of unity on a \mathcal{C}^∞ manifold	20
7 Orientation of manifolds. Integration on manifolds	22
8 Appendix on complex analytic sets	26
II Homology and cohomology of manifolds	29
1 Chains on a manifold (following de Rham). Stokes' formula .	29
2 Homology	31
3 Cohomology	36
4 De Rham duality	39
5 Families of supports. Poincaré's isomorphism and duality ...	41
6 Currents	45
7 Intersection indices	49
III Leray's theory of residues	55
1 Division and derivatives of differential forms	55
2 The residue theorem in the case of a simple pole.....	57
3 The residue theorem in the case of a multiple pole	61
4 Composed residues	63
5 Generalization to relative homology	64

IV	Thom's isotopy theorem	67
1	Ambient isotopy	67
2	Fiber bundles	70
3	Stratified sets	73
4	Thom's isotopy theorem	77
5	Landau varieties	80
V	Ramification around Landau varieties	85
1	Overview of the problem	85
2	Simple pinching. Picard–Lefschetz formulae	89
3	Study of certain singular points of Landau varieties	98
VI	Analyticity of an integral depending on a parameter	109
1	Holomorphy of an integral depending on a parameter	109
2	The singular part of an integral which depends on a parameter	114
VII	Ramification of an integral whose integrand is itself ramified	127
1	Generalities on covering spaces	127
2	Generalized Picard–Lefschetz formulae	130
3	Appendix on relative homology and families of supports	133
	Technical notes	137
	Sources	141
	References	143

Part II Introduction to the study of singular integrals and hyperfunctions

	Introduction	147
VIII	Functions of a complex variable in the Nilsson class	149
1	Functions in the Nilsson class	149
2	Differential equations with regular singular points	154
IX	Functions in the Nilsson class on a complex analytic manifold	157
1	Definition of functions in the Nilsson class	157
2	A local study of functions in the Nilsson class	159

X	Analyticity of integrals depending on parameters	163
1	Single-valued integrals	163
2	Multivalued integrals	164
3	An example	167
XI	Sketch of a proof of Nilsson's theorem	171
XII	Examples: how to analyze integrals with singular integrands	175
1	First example	175
2	Second example	183
XIII	Hyperfunctions in one variable, hyperfunctions in the Nilsson class	185
1	Definition of hyperfunctions in one variable	185
2	Differentiation of a hyperfunction	186
3	The local nature of the notion of a hyperfunction	187
4	The integral of a hyperfunction	188
5	Hyperfunctions whose support is reduced to a point	189
6	Hyperfunctions in the Nilsson class	189
XIV	Introduction to Sato's microlocal analysis	191
1	Functions analytic at a point x and in a direction	191
2	Functions analytic in a field of directions on \mathbb{R}^n	191
3	Boundary values of a function which is analytic in a field of directions	193
4	The microsingular support of a hyperfunction	196
5	The microsingular support of an integral	197
A	Construction of the homology sheaf of X over T	201
B	Homology groups with local coefficients	205
	Supplementary references, by Claude Sabbah	207
	Index	215

Singularities of integrals

Homology, hyperfunctions and microlocal analysis

Pham, F.

2011, XI, 217 p., Softcover
