

Contents

1	Notation and Background	1
1.1	Notation	1
1.2	Analytic and Meromorphic Functions	2
1.3	Differential and Difference Equations	4
1.4	Differential Forms	12
1.5	The Cauchy–Kovalevskaya Theorem	19
1.6	The Frobenius Theorem	20
1.7	Semi-simple, Normal and Nilpotent Square Matrices	25
2	Analysis of Linear Systems	29
2.1	The Linear Centralizer and Linear Normalizer of a Square Matrix	29
2.2	Darboux Polynomials and First Integrals	45
3	Analysis of Continuous-Time Nonlinear Systems	55
3.1	Semi-invariants and Darboux Polynomials of Continuous-Time Nonlinear Systems	55
3.2	Symmetries and Orbital Symmetries of Continuous-Time Nonlinear Systems	60
3.3	Continuous-Time Homogeneous Nonlinear Systems	70
3.4	Characteristic Solutions of Continuous-Time Homogeneous Nonlinear Systems	79
3.5	Reduction of Continuous-Time Nonlinear Systems	82
3.6	Continuous-Time Nonlinear Planar Systems	84
3.7	Parameterization of Continuous-Time Nonlinear Planar Systems Having a Given Orbital Symmetry	90
3.8	The Inverse Jacobi Last Multiplier	94
3.9	Matrix Integrating Factors	98
3.10	Lax Pairs for Continuous-Time Nonlinear Systems	100
3.11	A “Computational” Result for the Darboux Polynomials of Continuous-Time Nonlinear Systems	107
3.12	The Poincaré–Dulac Normal Form of Continuous-Time Nonlinear Systems	110

3.13	Homogeneity and Resonance of Continuous-Time Nonlinear Systems	130
3.14	The Belitskii Normal Form of Continuous-Time Nonlinear Systems	132
3.15	Nonlinear Transformations of Linear Systems	135
3.16	Invariant Distributions and Dual Semi-Invariants	137
3.17	Decomposition of Continuous-Time Nonlinear Systems	140
3.18	Symmetries of Algebraic Equations	143
3.19	Symmetries and Dimensional Analysis	144
3.20	Symmetries of Scalar Ordinary Differential Equations	146
4	Analysis of Discrete-Time Nonlinear Systems	153
4.1	Semi-invariants and Darboux Polynomials of Discrete-Time Nonlinear Systems	153
4.2	A “Computational” Result for the Darboux Polynomials of Discrete-Time Nonlinear Systems	154
4.3	Symmetries of Discrete-Time Nonlinear Systems	158
4.4	Symmetries of Scalar Discrete-Time Nonlinear Systems	161
4.5	Reduction of Discrete-Time Nonlinear Systems	165
4.6	A Property of Discrete-Time Nonlinear Planar Systems	166
4.7	Lax Pairs for Discrete-Time Nonlinear Systems	168
4.8	The Poincaré–Dulac Normal Form for Discrete-Time Nonlinear Systems	172
4.9	Linearization of Discrete-Time Nonlinear Systems	178
4.10	Homogeneity and Resonance of Discrete-Time Nonlinear Systems	179
4.11	The Belitskii Normal Form of Discrete-Time Nonlinear Systems	182
4.12	Decomposition of Discrete-Time Nonlinear Systems	184
5	Analysis of Hamiltonian Systems	187
5.1	Euler–Lagrange Equations	187
5.2	Hamiltonian Systems	189
5.3	Normal Forms of Hamiltonian Systems	202
5.4	Hamiltonian Planar Systems	207
5.5	Systems Having an Inverse Jacobi Last Multiplier Equal to 1	214
6	Lie Algebras	221
6.1	Abstract Lie Algebras	221
6.2	Lie Algebras of Matrices	224
6.3	Lie Algebras of Vector Functions	226
6.4	Representation of Lie Algebras by Vector Functions	229
6.5	Nonlinear Superposition	231
6.6	Nonlinear Superposition Formulas for Solvable Lie Algebras	242
6.6.1	Two-Dimensional Lie Algebras	244
6.7	Darboux Polynomials of a Lie Algebra	247
6.8	The Joint Poincaré–Dulac Normal Form	252
6.9	The Exponential Notation	254

6.10	The Wei–Norman Equations	262
6.11	Commutation Rules	267
7	Linearization by State Immersion	275
7.1	Sufficient Conditions for the Existence of a Linearizing State Immersion	275
7.1.1	Linearization of Continuous-Time Systems by State Immersion	276
7.1.2	Linearization of Discrete-Time Systems by State Immersion	280
7.2	Computation of the Flow by State Immersion	281
7.3	Computation of a Linearizing Diffeomorphism by Using Semi-invariants	283
7.4	Linearization of Hamiltonian Planar Systems	285
7.5	Linearization of Higher Order Hamiltonian Systems	290
8	Stability Analysis	293
8.1	Background	293
8.2	Scalar Nonlinear Systems	297
8.3	Semi-invariants and Center Manifold for Planar Systems	300
8.4	Stability of Continuous-Time Critical Planar Systems	303
8.4.1	Linear Part with Imaginary Eigenvalues	304
8.4.2	A Simple Proof of a Bendixson Result for Planar Continuous-Time Systems	304
8.4.3	Stability Analysis for Planar Systems in the Belitskii Normal Form	309
8.5	Construction of Lyapunov Functions Through Darboux Polynomials for Linear Systems	316
8.6	Construction of Lyapunov Functions Through Darboux Polynomials for Nonlinear Systems	319
8.7	Examples of Construction of Lyapunov Functions	324
	References	329
	Index	335

Symmetries and Semi-invariants in the Analysis of
Nonlinear Systems

Menini, L.; Tornambè, A.

2011, IX, 340 p., Hardcover

ISBN: 978-0-85729-611-5
