Part I Designing the User Study

1 Overview	3
Chapter Summary	3
Study Focus	3
System Focus	4
Stakeholder Focus	4
Timeline and Software Development Cycle	5
Study Types	7
Naturalistic Observation	7
Case Studies, Field Studies and Descriptive Studies	8
Action Research	9
Surveys	10
Correlation Studies	12
Measurement Studies	13
Quasi-Experiments	14
Controlled Experiments or Demonstration Studies	16
Study Elements	17
Hypotheses	17
Variables	18
Study Participants and Other Sampling Units	19
Random Assignment	19
Statistical Analysis	20
Study Design Overview	20
Special Considerations for Medical Informatics	22
Study Subjects	22
Study Environment	23
Use of Live Data	24
HIPAA	25
References	26
2 Variables	29
Chapter Summary	29
Independent Variables	30

Types of Variables	30
Note about Random Assignment	32
Dependent Variables	32
Types of Variables	33
Common Information Retrieval Measures	34
Classification Measures	35
N-Fold Cross-Validation	38
Counts	40
Usability	41
User Satisfaction and Acceptance	41
Processing Resources	42
Confounded Variables	43
Bias Caused by Nuisance Variables	45
Subject-Related Bias	45
Experimenter-Related Bias	47
Design-Related Bias	48
Hawthorne Effect	49
Other Sources of Bias	50
References	51
3 Design Equation and Statistics	55
Chapter Summary	55
Experimental Design Model	56
Rationale	56
Design Equation	57
Statistical Testing	59
Descriptive and Inferential Statistics	60
Essential Concepts	60
Rationale of Statistical Testing	63
t-test	65
F-test and ANOVA	68
Chi-Square	71
Significance Levels	74
Internal Validity	74
External Validity	75
Users	75
Environment	76
Task or Data	77
Errors and Power	77
Hypotheses	78
Type I and Type II Errors	80
Statistical Power	81
Robustness of Tests	82
References	83

4	Between-Subjects Designs	85
	Chapter Summary	85
	The Between-Subjects Principle	85
	Advantages	87
	Disadvantages	87
	One Variable with Two Conditions: Independent Samples Design	88
	One Variable with Three or More Conditions:	
	Completely Randomized Design	90
	Two or More Variables: Completely Randomized Factorial Design . . .	91
	References	93
5	Within-Subject Designs	95
	Chapter Summary	95
	The Within-Subjects Principle	95
	Advantages	97
	Disadvantages	97
	One Variable with Two Conditions: Paired Samples Design	98
	One Variable with Three or More Conditions: Randomized	
	Block Design	100
	Two or More Variables: Randomized Block Factorial Design	101
	References	104
6	Advanced Designs	105
	Chapter Summary	105
	Between- and Within-Subjects Design	105
	Blocking Two Nuisance Variables: Latin Square Design	107
	Fixed and Random Effects Models	109
	References	110
Part II Practical Tips		
7	Understanding Main and Interaction Effects	113
	Chapter Summary	113
	One Independent Variable	113
	Two Conditions	114
	Three Conditions	115
	Lack of Effects	117
	Two Independent Variables	118
	Main Effects	119
	Interaction Effects	120
	Main and Interaction Effects	121
	Three or More Independent Variables	122
	References	124
8	Conducting Multiple Comparisons	125
	Chapter Summary	125
	Types of Comparisons	125

Bonferroni Procedure for Multiple t-Tests	126
Post Hoc Comparisons with ANOVA: Tukey HSD Test	128
References.	129
9 Gold Standard and User Evaluations.	131
Chapter Summary	131
Gold Standards	131
Advantages	133
Disadvantages	134
User Evaluation.	135
Advantages	136
Disadvantages	137
References.	137
10 Recruiting and Motivating Study Participants	139
Chapter Summary	139
Type and Number of Participants	139
Participant Characteristics	140
Number of Participants	140
Random Assignment.	141
Recruitment and Retention Tips	142
Advertise and Appeal	142
Be Clear	143
Remove Obstacles.	144
Leverage Existing Resources	144
Motivate	145
Sampling Methods	147
Random Sampling.	148
Stratified Random Sampling	148
Convenience Sampling	149
Snowball Sampling	149
Sampling Bias.	150
References.	151
11 Institutional Review Board (IRB) Approval	153
Chapter Summary	153
Origin of the IRB	153
Who Needs Permission.	156
IRB and Other Review Boards	158
IRB Components for Information Systems Evaluation	159
Informed Consent Information	161
Informed Consent Form	162
Informed Consent Process	163
Effects of IRB on Research.	164
References.	165

12 Resources	167
Chapter Summary	167
Pilot Studies as Resources	167
Datasets and Gold Standards	170
Text, Audio, Video and Other Corpora	170
Ontologies, Thesauri and Lexicons	170
Gold Standards	172
Data Gathering, Storage and Analysis Tools	173
Collecting User Responses	173
Databases	173
Data Analysis	174
Other	174
Guidelines, Certification, Training and Credits	175
Protection of Human Subjects	175
References	176
 Part III Common Mistakes to Avoid	
13 Avoid Bias	181
Chapter Summary	181
Countermeasures for Subject-Related Bias	181
Countermeasures for Experimenter-Related Bias	183
Countermeasures for Design-Related Bias	185
Other Countermeasures	186
Beware of Overreacting	187
References	187
14 Avoid Missing the Effect	189
Chapter Summary	189
Problems with Within- and Between-Group Variation	189
Too Little Between-Groups Variation	191
Too Much Within-Groups Variation	192
Problems with Sample Size or Statistics	193
Increasing Power	195
References	196
15 Avoid Missing Variables or Conditions	197
Chapter Summary	197
Missing an Important Variable	197
Missing an Important Condition	199
Missing Other Effects	200
References	201
16 Other Errors to Avoid	203
Chapter Summary	203
Confusing Development and Evaluation	203

Testing During Development	204
Formative Evaluation	204
Summative Evaluation	205
Substandard Baselines: Demos and Defaults	206
Not Verifying Randomization	207
Useless Likert Scales	208
List the Items	209
One Statement per Item	210
Clear Language	210
Suitability	210
Length	211
Consistency	211
References	212
Appendix: Cookbook for Designing User Studies in Informatics	213
Recipe 1: Evaluating Standalone Algorithms Using Artifacts	213
Recipe Summary	213
Place in the Development Life Cycle and Example	213
Choose the Dataset	215
Choose the Dependent Variable	216
Choose the Independent Variable	217
Choose the Study Design	218
Complete IRB Requirements	219
Conduct the Study	220
References	220
Recipe 2: Evaluating Standalone Algorithms Using Subjects	221
Recipe Summary	221
Place in the Development Life Cycle and Example	221
Choose the Dataset	222
Choose the Dependent Variable	223
Choose the Independent Variable	224
Choose the Study Design	225
Complete IRB Requirements	226
Conduct the Study	227
References	227
Recipe 3: Comparing Algorithms Using Artifacts	228
Recipe Summary	228
Place in the Development Life Cycle	228
Choose the Dataset	229
Choose the Dependent Variable	231
Choose the Independent Variable	232
Choose the Study Design	233
Complete IRB Requirements	233
Conduct the Study	234
References	234

Recipe 4: Comparing Algorithms Using Subjects	235
Recipe Summary	235
Place in the Development Life Cycle	235
Choose the Dataset	236
Choose the Dependent Variable	237
Choose the Independent Variable	238
Choose the Study Design	239
Complete IRB Requirements	240
Conduct the Study	241
Recipe 5: Evaluating Standalone Information Systems	
Using Subjects	242
Recipe Summary	242
Place in the Development Life Cycle	242
Choose the Dataset	244
Choose the Dependent Variable	244
Choose the Independent Variable	245
Choose the Study Design	246
Complete IRB Requirements	247
Conduct the Study	248
Recipe 6: Comparing Information Systems Using Subjects	249
Recipe Summary	249
Place in the Development Life Cycle	249
Choose the Dataset	250
Choose the Dependent Variable	251
Choose the Independent Variable	252
Choose the Study Design	253
Complete IRB Requirements	254
Conduct the Study	255
Reference	255
Index	257
