Part I Theory

1	Introduction	3
1.1	A Brief History of Dynamic Surface Control	3
1.2	Sliding Mode Control	4
1.3	Integrator Backstepping	5
1.3.1	Mismatched Uncertainties	5
1.3.2	Design Methodology	5
1.4	Multiple Sliding Surface Control	7
1.5	Dynamic Surface Control	11
1.5.1	Motivating Example	11
1.5.2	An LMI Approach	13
1.6	Book Organization	14
1.7	Origin of the Book	16
2	Dynamic Surface Control	19
2.1	Motivation	19
2.2	Problem Statement	21
2.3	Design Procedure	23
2.4	Augmented Error Dynamics	25
2.5	Quadratic Stabilization	30
2.5.1	Nominal Error Dynamics	31
2.5.2	Norm-Bounded Error Dynamics	35
2.5.3	Diagonal Norm-Bounded Error Dynamics	41
2.6	Ultimate and Quadratic Boundedness	44
3	Robustness to Uncertain Nonlinear Systems	57
3.1	Uncertain Lipschitz Systems	57
3.1.1	Problem Statement	57
3.1.2	Quadratic Stability and Tracking	58
3.2	DSC with Nonlinear Damping	66
3.2.1	Problem Statement	66

3.2.2	Stabilization and Quadratic Boundedness	67
3.3	Input–Output Stability	75
4	Observer-Based Dynamic Surface Control	79
4.1	Nonlinear Observer Design	80
4.1.1	Problem Statement	80
4.1.2	Quadratic Stability of Observer	81
4.1.3	Design of Observer Gain Matrix	85
4.2	A Separation Principle	91
4.2.1	Preliminary Design of ODSC	91
4.2.2	Augmented Error Dynamics	92
4.2.3	Separation Principle of Error Dynamics	96
4.3	Quadratic Stabilization and Tracking	97
4.4	Consideration of Uncertainty	100
4.4.1	Redesign of Nonlinear Observer	102
4.4.2	Design Procedure of ODSC	103
5	Constrained Stabilization	107
5.1	Problem Statement and Preliminaries	107
5.2	Local Regulation and Regions of Attraction	110
5.3	Robust Constrained Stabilization	117
6	Multi-Input Multi-Output Mechanical Systems	123
6.1	Fully-Actuated Mechanical System	124
6.2	Synthesis of Dynamic Surface Control	125
6.2.1	Error Dynamics	125
6.2.2	Synthesis for Stabilization	127
6.2.3	Synthesis for Quadratic Tracking	136
6.2.4	Avoiding Cancelations	141
6.3	Extension to Rigid Body Dynamics	142
6.4	Decentralized Dynamic Surface Control	144
6.4.1	Preliminary Design of DDSC	144
6.4.2	Augmented Error Dynamics	145
6.4.3	Decentralized Stabilization	147

Part II Applications

7	Automated Vehicle Control	155
7.1	Application to Longitudinal Vehicle Control	158
7.1.1	Engine and Brake Control via DSC	158
7.1.2	Switched Closed Loop Error Dynamics	160
7.1.3	Simultaneous Quadratic Boundedness	162
7.1.4	Input–Output Stability	167
7.2	Passive Fault Tolerant Control	169
7.2.1	Problem Statement	170
7.2.2	Error Dynamics for a Faulty Nonlinear System	171
7.2.3	Fault Classification	175

8	Fault Tolerant Control for AHS	183
8.1	Controller Reconfiguration	185
8.1.1	Observer-Based DSC	186
8.1.2	Trajectory Reconfiguration	187
8.2	Longitudinal Control for an Automated Transit Bus	189
8.2.1	Longitudinal Control via DSC	189
8.2.2	Quadratic Tracking and Validation	193
8.3	Active Fault Tolerant Control	198
8.3.1	Error Dynamics for Faulty System	199
8.3.2	Sensor Fault Handling	201
8.3.3	Trajectory Reconfiguration for Longitudinal Control	207
9	Biped Robot Control	217
9.1	Hybrid Biped Model	218
9.2	Trajectory Generation	221
9.3	Motion Control for SSP and DSP	224
9.3.1	Application of Dynamic Surface Control	224
9.3.2	Augmented Error Dynamics	225
9.3.3	Piecewise Quadratic Boundedness	227
9.4	Simulation Results	228
	Appendix Proofs	233
A.1	Proof of Lemma 2.1	233
A.2	Proof of Lemma 3.1	235
A.3	Proof of Lemma 3.2	238
A.4	Proof of Theorem 5.3	241
	References	245
	Index	251

Dynamic Surface Control of Uncertain Nonlinear
Systems

An LMI Approach

Song, B.; Hedrick, J.K.

2011, XIV, 254 p., Hardcover

ISBN: 978-0-85729-631-3
