

Contents

1	Affine Spaces	1
1.1	Introduction	1
1.2	Definition of Affine Space	1
1.2.1	Observations	2
1.3	Examples	3
1.4	The Dimension of an Affine Space	4
1.5	First Properties	5
1.6	Linear Varieties	7
1.6.1	Observations	7
1.7	Examples of Straight Lines	9
1.8	Linear Varieties Generated by Points	11
1.9	The Affine Grassmann Formulas	12
1.10	Affine Frames	16
1.10.1	Change of Affine Frame	17
1.11	Equations of a Linear Variety	19
1.11.1	Equations of Straight Lines	24
1.11.2	Equations of Hyperplanes	25
1.12	Barycenter	27
1.12.1	Computations in Coordinates	28
1.13	Simple Ratio	28
1.13.1	Characterization of the Points of a Line Segment ($k = \mathbb{R}$)	29
1.13.2	Characteristic Property of the Barycenter of a Triangle	30
1.13.3	The Real Plane as a Complex Straight Line	31
1.14	Theorems of Thales, Menelaus and Ceva	32

2	Affinities	47
2.1	Introduction	47
2.2	Definition of Affinity	47
2.3	First Properties	49
2.4	The Affine Group	53
2.5	Affinities and Linear Varieties	55
2.6	Equations of Affinities	57
2.7	Invariant Varieties	63
2.8	Examples of Affinities	66
2.8.1	Translations	66
2.8.2	Homotheties	68
2.8.3	Symmetries	70
2.8.4	Projections	72
2.9	Characterization of Affinities of the Line	74
2.10	The Fundamental Theorem of Affine Geometry	76
2.10.1	A Note on Automorphisms of Fields	86
3	Classification of Affinities	91
3.1	Introduction	91
3.2	Similar Endomorphisms	91
3.3	Similar Affinities	92
3.4	Computations in Coordinates	93
3.5	Invariance Level	98
3.5.1	Invariance Level in Dimension 1	98
3.5.2	Invariance Level in Dimension 2	99
3.6	Classification of Affinities of the Line	99
3.7	Classification of Affinities of the Real Plane	102
3.7.1	Classification of Endomorphisms in Real Dimension Two	102
3.7.2	List of Canonical Expressions of Endomorphisms	103
3.7.3	Canonical Expressions of Affinities	104
3.8	Invariance Level in the Real Plane	113
3.8.1	Summary of the Classification of Affinities of the Real Plane	115
3.9	Geometrical Interpretation	116
3.9.1	Homologies	116
3.9.2	Elliptic Affinities	117
3.9.3	Parabolic Affinities	118
3.9.4	Hyperbolic Affinities	120
3.10	Decomposition of Affinities in the Real Plane	121

4	Classification of Affinities in Arbitrary Dimension	129
4.1	Introduction	129
4.2	Jordan Matrices	129
4.3	Similar Endomorphisms and Canonical Decomposition	133
4.4	Clarifying Examples	135
4.5	Classification of Affinities in Arbitrary Dimension	142
5	Euclidean Affine Spaces	159
5.1	Introduction	159
5.2	Definition of Euclidean Affine Space. Pythagoras' Theorem	159
5.3	The Distance Between Two Varieties	162
5.4	Common Perpendicular	163
6	Euclidean Motions	175
6.1	Introduction	175
6.2	Definition of Euclidean Motion	176
6.3	Examples of Euclidean Motions	177
6.3.1	Translations	177
6.3.2	Homotheties	177
6.3.3	Orthogonal Symmetries	177
6.3.4	Orthogonal Projections	178
6.4	Similar Euclidean Motions	179
6.5	Calculations in Coordinates	180
6.6	Glide Vector	183
6.7	Classification of Euclidean Motions	187
6.8	Invariance of the Glide Modulus	190
7	Euclidean Motions of the Line, the Plane and of Space	197
7.1	Introduction	197
7.2	Classification of Euclidean Motions of the Line	197
7.3	Classification of Euclidean Motions of the Plane	199
7.3.1	List of Canonical Expressions of Isometries	199
7.3.2	List of Canonical Expressions of Euclidean Motions	200
7.4	Geometrical Interpretation	202
7.5	Classification of Euclidean Motions of Space	204
7.5.1	List of Canonical Expressions of Isometries	204
7.5.2	List of Canonical Expressions of Euclidean Motions	204
7.6	Geometrical Interpretation	207
7.7	Composition of Rotations in Dimension Three	213
7.7.1	First Decomposition of a Rotation as a Product of Symmetries	214

7.7.2	Second Decomposition of a Rotation as a Product of Symmetries	215
8	Affine Classification of Real Quadrics	225
8.1	Introduction	225
8.2	Quadratic Polynomials	225
8.2.1	The Symmetric Matrix Associated to a Polynomial	227
8.3	Definition of a Quadric	228
8.3.1	Polynomials or Zeros of Polynomials?	228
8.4	Change of Affine Frame	229
8.5	Image of a Quadric Under an Affinity	231
8.6	Equivalent Quadratic Polynomials	232
8.7	Invariants	236
8.8	Canonical Representatives Without Linear Part	238
8.8.1	Canonical Expression	240
8.9	Canonical Representatives with Linear Part	242
8.9.1	Observations	244
8.9.2	Canonical Expression	244
8.9.3	Conclusion	245
8.10	The Number of Equivalence Classes of Quadratic Polynomials	246
8.11	Regular Zeros	248
8.12	Affine Classification of Quadrics	249
8.12.1	Construction of the Adapted Affine Frame	255
8.13	Affine Classification of Conics	256
8.14	Affine Classification of Quadrics in Dimension Three	259
8.15	Quadrics Without Regular Points	264
8.16	Quadrics with Center	266
8.17	Tangent Cone	270
9	Orthogonal Classification of Quadrics	285
9.1	Introduction	285
9.2	Orthogonally Equivalent Quadratic Polynomials	285
9.2.1	Invariants	289
9.3	Criterion for Ordering	289
9.4	Canonical Representatives Without Linear Part	290
9.5	Canonical Representatives with Linear Part	293
9.5.1	Observations	297
9.5.2	Conclusion	299
9.6	Invariants	301
9.7	Orthogonal Classification of Quadrics	303
9.7.1	Construction of the Adapted Orthonormal Affine Frame	307

9.8	Orthogonal Classification of Conics	307
9.9	Orthogonal Classification of Quadrics in Dimension Three . .	309
9.10	Symmetries of a Quadric	312
A	Vector Spaces with Scalar Product	319
A.1	Introduction	319
A.1.1	The Standard Scalar Product on \mathbb{R}^n	320
A.2	Bilinear Maps	320
A.2.1	The Matrix of a Bilinear Map	321
A.2.2	Change of Basis	322
A.2.3	Symmetric Bilinear Maps	324
A.2.4	The Radical	324
A.3	Scalar Product	326
A.4	The Orthogonal Group	329
A.4.1	Positive Definite Matrices	330
A.5	Orthogonal Vector Subspaces	331
A.6	Isometries	332
A.7	Polynomials of Isometries	336
A.8	The Orthogonal Groups $O(2)$ and $O(3)$	341
A.9	Classification of Isometries	343
B	Diagonalization of Bilinear Symmetric Maps	347
B.1	Introduction	347
B.2	The Diagonalization Theorem	347
B.3	Canonical Expression	354
B.4	Uniqueness of the Canonical Expression	359
B.4.1	The Complex Case	360
B.4.2	The Real Case	360
B.4.3	The Finite Case	363
B.4.4	Matricial Version	365
B.5	The Method of Completing the Squares	367
B.6	Classification of Symmetric Bilinear Maps	373
B.7	Projective Classification	377
C	Orthogonal Diagonalization	381
C.1	Introduction	381
C.2	Associated Endomorphism	381
C.3	Self-adjoint Endomorphisms	382
C.4	Orthogonal Diagonalization of Symmetric Matrices	384
C.5	The Spectral Theorem	386
C.6	Quick Calculation of the Positivity Dimension	389

D	Polynomials with the Same Zeros	397
D.1	Introduction	397
D.2	The Nullstellensatz	397
