

# Contents

<b>1</b>	<b>Generic Iwahori–Hecke Algebras</b>	<b>1</b>
1.1	Coxeter Groups and Weight Functions	2
1.2	Representations of $\mathbf{H}$	7
1.3	Lusztig’s $\mathbf{a}$ -Invariants	13
1.4	Balanced Representations	20
1.5	The Asymptotic Algebra	28
1.6	Introducing Cells	36
1.7	Examples of Cells	43
1.8	Cells and Leading Coefficients	52
<b>2</b>	<b>Kazhdan–Lusztig Cells and Cellular Bases</b>	<b>59</b>
2.1	The Kazhdan–Lusztig Basis	60
2.2	A Pre-order Relation on $\text{Irr}(W)$	69
2.3	On Lusztig’s Conjectures, I	78
2.4	On Lusztig’s Conjectures, II	86
2.5	On Lusztig’s Conjectures, III	96
2.6	A Cellular Basis for $\mathbf{H}$	105
2.7	Further Properties of the Cellular Basis of $\mathbf{H}$	114
2.8	The Case of the Symmetric Group	123
<b>3</b>	<b>Specialisations and Decomposition Maps</b>	<b>133</b>
3.1	Grothendieck Groups and Decomposition Maps	134
3.2	Canonical Basic Sets	143
3.3	Principal Specialisations and Blocks of Defect 1	153
3.4	Towards Canonical Basic Sets for Classical Types	162
3.5	A Canonical Basic Set for the Symmetric Group	171
3.6	Factorisation of Decomposition Maps	181
3.7	The General Version of James’s Conjecture	190
3.8	Blocks and Bad Specialisations	198

<b>4</b>	<b>Hecke Algebras and Finite Groups of Lie Type</b>	207
4.1	The Schur Functor and its Variations	208
4.2	Hom Functors and Harish-Chandra Series	215
4.3	Unipotent Principal Series Representations, I	223
4.4	Unipotent Principal Series Representations, II	232
4.5	Examples and Conjectures	240
4.6	A First Approach to Type $B_n$	250
<b>5</b>	<b>Representation Theory of Ariki–Koike Algebras</b>	261
5.1	The Complex Reflection Group of Type $G(l, 1, n)$	262
5.2	Basic Properties of Ariki–Koike Algebras	266
5.3	Ariki–Koike Algebras as Cellular Algebras	270
5.4	Decomposition Maps for Ariki–Koike Algebras	274
5.5	Cyclotomic Ariki–Koike Algebras	276
5.6	A Fock Datum for Ariki–Koike Algebras	284
5.7	FLOTW Multipartitions	289
5.8	On Basic Sets for Ariki–Koike Algebras	302
<b>6</b>	<b>Canonical Bases in Affine Type A and Ariki’s Theorem</b>	309
6.1	The Quantum Affine Algebra $\mathcal{U}_q(\widehat{\mathfrak{sl}}_e)$	310
6.2	The Fock Space and Ariki’s Theorem	316
6.3	Crystal and Canonical Bases for Highest Weight Modules	325
6.4	Computing Decomposition Matrices of Ariki–Koike Algebras	328
6.5	Uglov’s Theory of Fock Spaces	334
6.6	Canonical Bases for Fock Spaces	347
6.7	Computation of Canonical Basic Sets for Iwahori–Hecke Algebras	354
6.8	Recent Developments and Conjectures	359
<b>7</b>	<b>Decomposition Numbers for Exceptional Types</b>	363
7.1	Algorithmic Methods	364
7.2	Decomposition Matrices for $W$ of Dihedral Type	371
7.3	Decomposition Matrices for $W$ of Type $F_4$	374
7.4	Decomposition Matrices for Types $H_3, H_4, E_6, E_7, E_8$	379
	<b>References</b>	387
	<b>Index</b>	399

Representations of Hecke Algebras at Roots of Unity

Geck, M.; Jacon, N.

2011, XII, 404 p., Hardcover

ISBN: 978-0-85729-715-0
