1	Mathematical Modelling	1
1.1	Conservation Laws and Constitutive Laws	2
1.2	Non-dimensionalisation	3
1.2.1	Scaling	5
1.2.2	Approximations	5
1.3	Qualitative Methods for Differential Equations	6
1.3.1	Oscillations	7
1.3.2	Relaxation Oscillations	8
1.3.3	Hysteresis	10
1.3.4	Resonance	14
1.4	Qualitative Methods for Partial Differential Equations	18
1.4.1	Waves	18
1.4.2	Burgers' Equation	24
1.4.3	The Fisher Equation	26
1.4.4	Solitons	28
1.4.5	Non-linear Diffusion: Similarity Solutions	29
1.4.6	The Viscous Droplet	31
1.4.7	Advance and Retreat: Waiting Times	33
1.4.8	Blow-up	35
1.4.9	Reaction–Diffusion Equations	41
1.5	Notes and References	52
1.6	Exercises	55
2	Climate Dynamics	65
2.1	Radiation Budget	65
2.2	Radiative Heat Transfer	66
2.2.1	Local Thermodynamic Equilibrium	67
2.2.2	Equation of Radiative Heat Transfer	68
2.2.3	Radiation Budget of the Earth	68
2.2.4	The Schuster–Schwarzschild Approximation	72
2.2.5	Radiative Heat Flux	73

2.2.6	Scattering	74
2.2.7	Troposphere and Stratosphere	75
2.2.8	The Ozone Layer	77
2.3	Convection	79
2.3.1	The Wet Adiabatic	81
2.4	Energy Balance Models	83
2.4.1	Zonally Averaged Energy-Balance Models	84
2.4.2	Carbon Dioxide and Global Warming	86
2.4.3	The Runaway Greenhouse Effect	89
2.5	Ice Ages	92
2.5.1	Ice-Albedo Feedback	93
2.5.2	The Milankovitch Theory	96
2.5.3	Nonlinear Oscillations	97
2.5.4	Heinrich Events	98
2.5.5	Dansgaard-Oeschger Events	100
2.5.6	The 8,200 Year Cooling Event	102
2.5.7	North Atlantic Salt Oscillator	104
2.6	Snowball Earth	108
2.6.1	The Carbon Cycle	109
2.6.2	The Rôle of the Oceans	114
2.6.3	Ocean Acidity	116
2.7	Notes and References	119
2.8	Exercises	123
3	Oceans and Atmospheres	139
3.1	Atmospheric and Oceanic Circulation	139
3.2	The Geostrophic Circulation	141
3.2.1	Eddy Viscosity	141
3.2.2	Energy Transport	142
3.2.3	Global Energy Balance	147
3.2.4	Choosing Coordinates	148
3.2.5	Non-dimensionalisation	150
3.2.6	Day and Night, Land and Ocean	153
3.2.7	Parameter Estimates	154
3.2.8	Basic Reference State	155
3.2.9	A Reduced Model	156
3.2.10	Geostrophic Balance	158
3.3	The Planetary Boundary Layer	159
3.4	Poincaré and Kelvin Waves	160
3.5	The Quasi-geostrophic Approximation	164
3.5.1	Boundary Conditions	168
3.5.2	The Day After Tomorrow	171
3.6	Rossby Waves	175
3.6.1	Baroclinic Instability	176
3.6.2	The Eady Model	176

3.7	Frontogenesis	179
3.7.1	Depressions and Hurricanes	180
3.8	The Mixed Layer and the Wind-Driven Oceanic Circulation	182
3.9	Western Boundary Currents: The Gulf Stream	188
3.9.1	Effects of Basal Drag	189
3.9.2	Effects of Lateral Drag	191
3.10	Global Thermohaline Circulation	192
3.11	Tides and Tsunamis	193
3.11.1	The Tidal Equations	194
3.11.2	Ocean Tides	198
3.11.3	Seiches	200
3.11.4	Amphidromic Points	201
3.11.5	Tsunamis	205
3.12	Notes and References	211
3.13	Exercises	213
4	River Flow	223
4.1	The Hydrological Cycle	223
4.2	Chézy's and Manning's Laws	225
4.3	The Flood Hydrograph	226
4.4	St. Venant Equations	230
4.4.1	Non-dimensionalisation	231
4.4.2	Long Wave and Short Wave Approximation	231
4.4.3	The Monoclinal Flood Wave	232
4.4.4	Waves and Instability	235
4.5	Nonlinear Waves	237
4.5.1	Characteristics	238
4.5.2	Roll Waves	238
4.5.3	Tidal Bores	248
4.6	Notes and References	256
4.7	Exercises	260
5	Dunes	267
5.1	Patterns in Rivers	267
5.2	Dunes	270
5.2.1	Sediment Transport	273
5.2.2	Bedload	274
5.2.3	Suspended Sediment	274
5.3	The Potential Model	275
5.4	St. Venant Type Models	279
5.5	A Suspended Sediment Model	282
5.6	Eddy Viscosity Model	285
5.6.1	Orr–Sommerfeld Equation	285
5.6.2	Orr–Sommerfeld–Exner Model	289
5.6.3	Well-posedness	290

5.7	Mixing-Length Model for Aeolian Dunes	292
5.7.1	Mixing-Length Theory	293
5.7.2	Turbulent Flow Model	295
5.7.3	Boundary Conditions	295
5.7.4	Eddy Viscosity	296
5.7.5	Surface Roughness Layer	296
5.7.6	Outer Solution	298
5.7.7	Determination of p_{10}	300
5.7.8	Matching	302
5.7.9	Shear Layer	302
5.7.10	Linear Stability	305
5.8	Separation at the Wave Crest	308
5.8.1	Formulation of Hilbert Problem	311
5.8.2	Calculation of the Free Boundary	314
5.9	Notes and References	317
5.10	Exercises	325
6	Landscape Evolution	331
6.1	Weathering	331
6.2	The Erosional Cycle	332
6.3	River Networks	333
6.4	Denudation Models	334
6.4.1	Sediment Transport	335
6.4.2	Non-dimensionalisation	336
6.4.3	The Issue of Time Scale	339
6.5	Channel-Forming Instability	339
6.5.1	Boundary Conditions	340
6.5.2	Steady State Solution	341
6.5.3	Uplift and Denudation	343
6.5.4	Geomorphically Concave Slopes are Unstable	344
6.5.5	WKB Approximation at High Wave Number	347
6.5.6	Turning Point Analysis	348
6.5.7	Rivulet Theory: $\delta \ll 1$	354
6.6	Channel Formation	358
6.6.1	Channel Solutions	361
6.6.2	Bank Migration, Stability and Blow-up	361
6.7	Channels and Hillslope Evolution	363
6.7.1	Hillslope Evolution	366
6.7.2	Detachment Limited Erosion	367
6.7.3	Headward Erosion	370
6.7.4	Side-Branching	371
6.8	Notes and References	371
6.9	Exercises	375
7	Groundwater Flow	387
7.1	Darcy's Law	388

7.1.1	Hydraulic Conductivity	390
7.1.2	Homogenisation	390
7.1.3	Empirical Measures	392
7.2	Basic Groundwater Flow	393
7.2.1	Boundary Conditions	394
7.2.2	Dupuit Approximation	395
7.3	Unsaturated Soils	398
7.3.1	The Richards Equation	399
7.3.2	Non-dimensionalisation	400
7.3.3	Snow Melting	401
7.3.4	Similarity Solutions	404
7.4	Immiscible Two-Phase Flows: The Buckley–Leverett Equation	406
7.5	Heterogeneous Porous Media	408
7.5.1	Dual Porosity Models	409
7.6	Contaminant Transport	415
7.6.1	Reactive Dual Porosity Models	417
7.7	Environmental Remediation	421
7.7.1	Reactive Groundwater Flow	422
7.7.2	Biomass Modelling	423
7.7.3	Non-dimensionalisation	424
7.8	Three Specific Remediation Problems	425
7.9	Precipitation and Dissolution	436
7.10	Consolidation	441
7.11	Compaction	444
7.12	Notes and References	449
7.13	Exercises	452
8	Mantle Convection	463
8.1	Plate Tectonics	463
8.2	Rayleigh–Bénard Convection	469
8.2.1	Boundary Conditions	470
8.2.2	Non-dimensionalisation	470
8.2.3	Boussinesq Approximation	472
8.2.4	Linear Stability	473
8.3	Nonlinear Stability; Planforms	475
8.3.1	Landau Equation	476
8.3.2	Plan Forms	479
8.3.3	Dislocations and Chaos	486
8.4	High Rayleigh Number Convection	488
8.4.1	Boundary Layer Theory	490
8.5	Variable Viscosity	495
8.5.1	Rheology of Polycrystalline Rocks	496
8.5.2	Governing Equations	497
8.5.3	Boundary Conditions	497
8.5.4	Boundary Layer Analysis	498
8.5.5	Summary	515

8.6	Subduction and the Yield Stress	517
8.6.1	Near-Surface Mantle Rheology	517
8.6.2	The Plastic Lid: Failure and Subduction	519
8.7	Tectonics on Venus	521
8.8	Notes and References	524
8.9	Exercises	532
9	Magma Transport	539
9.1	The Magmatic Cycle	540
9.2	Mechanisms of Magma Ascent	542
9.3	Phase Diagrams and Geochemistry	544
9.3.1	Phase Diagrams	545
9.3.2	Ternary Phase Diagrams	548
9.3.3	Olivine	551
9.3.4	Summary	552
9.3.5	Melting	553
9.3.6	Continental Crust	555
9.3.7	MORB, OIB, CFB	555
9.3.8	Granite	556
9.4	Melt Transport in the Asthenosphere	557
9.4.1	Summary	561
9.4.2	Simplification	562
9.4.3	Boundary Conditions	565
9.4.4	Thermodynamic Equilibrium	566
9.4.5	Stefan Condition	568
9.4.6	Steady State Solution, One Dimension	568
9.4.7	Outer Solution	568
9.4.8	Boundary Layer at $z = 0$	569
9.4.9	Boundary Layer at $z = 1$	569
9.5	Magmafracturing in the Lithosphere	571
9.5.1	Fracture Mechanics	571
9.5.2	Magma Dynamics	575
9.5.3	Stress Intensity Factor	575
9.5.4	Non-dimensionalisation and Solution	577
9.6	Crystallisation in Magma Chambers	579
9.6.1	The Formation of Magma Chambers	580
9.6.2	Nucleation and Crystallisation	580
9.6.3	Double-Diffusive Convection	589
9.6.4	Layered Igneous Intrusions	591
9.7	Volcanic Eruptions	596
9.7.1	Types of Eruption	596
9.7.2	Strombolian Eruptions	597
9.7.3	Plinian Eruptions	598
9.8	Notes and References	599
9.9	Exercises	606

10	Glaciers and Ice Sheets	617
10.1	Dynamic Phenomena	618
10.1.1	Waves on Glaciers	618
10.1.2	Surges	619
10.1.3	Ice Streams	624
10.1.4	Ice Shelf Instability	625
10.1.5	Tidewater Glaciers	625
10.1.6	Jökulhlaups	626
10.2	The Shallow Ice Approximation	626
10.2.1	Glaciers	626
10.2.2	Ice Sheets	631
10.2.3	Temperature Equation	634
10.2.4	A Simple Non-isothermal Ice Sheet Model	637
10.2.5	Using the Equations	644
10.2.6	Ice Shelves	647
10.2.7	The Grounding Line	650
10.2.8	Marine Ice Sheet Instability	653
10.3	Sliding and Drainage	655
10.3.1	Röthlisberger Channels	661
10.3.2	Linked Cavities	664
10.3.3	Canals	666
10.3.4	Ice Streams	668
10.4	Waves, Surges and Mega-surges	673
10.4.1	Waves on Glaciers	673
10.4.2	Surges	680
10.4.3	Sliding and Ice Streams	682
10.4.4	Heinrich Events and the Hudson Strait Mega-surge	685
10.5	Drumlins and Eskers	686
10.5.1	Drumlins	687
10.5.2	Eskers	699
10.6	Glaciology on Mars	704
10.6.1	Non-dimensionalisation	708
10.6.2	Multiple Steady States	712
10.6.3	Trough Formation	713
10.6.4	Multiple Troughs	716
10.7	Notes and References	717
10.8	Exercises	728
11	Jökulhlaups	741
11.1	The Nye Model	742
11.2	Non-dimensionalisation	744
11.3	Boundary Conditions and Lake Refilling	747
11.4	Simplification of the Model	748
11.5	Periodic Oscillations	750
11.5.1	Breaking the Seal	751
11.5.2	Wide Channels and the 1996 Eruption	757

11.6	Cauldrons and Calderas	758
11.6.1	Viscous Beam Theory	758
11.6.2	The Beam Boundary Layer	766
11.6.3	Similarity Solutions	769
11.7	Floods from Ice Sheets	773
11.8	Notes and References	779
11.9	Exercises	784
Appendix A	The Schwarzschild–Milne Integral Equation	793
A.1	Exercises	797
Appendix B	Turbulent Flow	799
B.1	The Reynolds Equation	800
B.2	Eddy Viscosity	801
B.3	Pipe Flow	802
B.4	Extension to Rivers	803
B.5	Manning’s Law	803
B.6	Entry Length	804
B.7	Sediment Deposition	804
Appendix C	Asymptotic Solution of the Orr–Sommerfeld Equation	807
C.1	Matching	814
Appendix D	Melting, Dissolution, and Phase Changes	817
D.1	Thermodynamics of Pure substances	817
D.2	The Energy Equation	819
D.3	Phase Change: Clapeyron Equation	820
D.4	Phase Change in Multi-component Materials	821
D.5	Melting and Freezing	824
D.6	Precipitation and Dissolution	824
D.7	Evaporation and Boiling	825
D.8	Chemical Reactions	826
D.9	Surface Energy	826
D.9.1	The Gibbs–Thomson Effect	827
D.10	Pre-melting	827
D.10.1	Disjoining Pressure	829
D.10.2	Freezing Point Depression	829
D.11	Liesegang Rings	829
D.11.1	Central Precipitation	832
D.12	Exercises	834
Appendix E	Averaged Equations in Two Phase Flow	837
E.1	Discontinuities and Jump Conditions	837
E.2	Averaging Methods	838
E.3	Mass and Momentum Equations	840
E.4	Energy Equation	842
E.5	Jump Conditions	843

E.5.1 Practical Approximations 844

E.5.2 Thermodynamics 844

E.6 Nye’s Energy Equation in a Subglacial Channel 845

E.7 Exercises 848
