Part I Generalities

1	Linear Systems Subject to Control Saturation—Problems and Modeling	3
1.1	Introduction	3
1.2	The Open-Loop System	4
1.3	The Closed-Loop System	5
1.4	The Region of Linearity	12
1.5	The Region of Attraction	13
1.6	Problems Considered	14
1.6.1	Asymptotic Stability Analysis	15
1.6.2	Asymptotic Stabilization	18
1.6.3	External Stability Analysis	28
1.6.4	External Stabilization	30
1.6.5	The Anti-windup Problem	31
1.7	Models for the Saturation Nonlinearity	32
1.7.1	Polytopic Models	33
1.7.2	Sector Nonlinearity Models	40
1.7.3	Regions of Saturation Models	44
1.8	Equilibrium Points	46
1.9	Conclusion	47

Part II Stability Analysis and Stabilization

2	Stability Analysis and Stabilization—Polytopic Representation Approach	51
2.1	Introduction	51
2.2	Asymptotic Stability Analysis	52
2.2.1	Ellipsoidal Sets of Stability	52
2.2.2	Polytopic Approach I	54
2.2.3	Polytopic Approach II	56

2.2.4	Polytopic Approach III	58
2.2.5	Optimization Problems	59
2.3	External Stability	65
2.3.1	Amplitude Bounded Exogenous Signals	66
2.3.2	Energy Bounded Exogenous Signals	71
2.4	Stabilization	76
2.4.1	State Feedback Stabilization	76
2.4.2	Observer-Based Feedback Stabilization	91
2.4.3	Dynamic Output Feedback Stabilization	95
2.4.4	Global Stabilization	101
2.5	Uncertain Systems	103
2.5.1	Stability Analysis	103
2.5.2	Extensions	108
2.6	Discrete-Time Case	109
2.6.1	Ellipsoidal Regions of Asymptotic Stability	110
2.6.2	Polyhedral Regions of Asymptotic Stability	112
2.6.3	Extensions	119
2.7	Conclusion	120
3	Stability Analysis and Stabilization—Sector Nonlinearity Model	
	Approach	123
3.1	Introduction	123
3.2	Asymptotic Stability Analysis	124
3.2.1	Quadratic Lyapunov Function	125
3.2.2	Lure Lyapunov Function	129
3.2.3	Computational Burden	132
3.2.4	Optimization Problems	133
3.3	External Stability	136
3.3.1	Amplitude Bounded Exogenous Signals	136
3.3.2	Energy Bounded Exogenous Signals	141
3.3.3	Optimization Issues	145
3.4	Stabilization	146
3.4.1	State Feedback Stabilization	146
3.4.2	Observer-Based Feedback Stabilization	155
3.4.3	Dynamic Output Feedback Stabilization	161
3.5	Uncertain Systems	171
3.6	Discrete-Time Case	178
3.7	Extensions	180
3.7.1	Nested Saturations	180
3.7.2	Nested Nonlinearities	181
3.7.3	Nonlinear and/or Hybrid Systems	182
3.8	Conclusion	183
4	Analysis via the Regions of Saturation Model	185
4.1	Introduction	185
4.2	Polyhedral Regions of Stability	186

4.2.1	Positive Invariance	186
4.2.2	Contractivity—Compact Case	189
4.2.3	Determination of Stability Regions	193
4.3	Ellipsoidal Regions	196
4.3.1	Test Condition 1	197
4.3.2	Test Condition 2	200
4.4	Discrete-Time Case	202
4.4.1	Positive Invariance	202
4.4.2	Contractivity—Compact Case	203
4.5	Unbounded Sets of Stability	204
4.5.1	Unbounded Polyhedra	204
4.5.2	Unbounded Ellipsoidal Sets	206
4.6	Conclusion	207
5	Synthesis via a Parameterized ARE Approach or a Parameterized LMI Approach	209
5.1	Introduction	209
5.2	The Parameterized ARE Approach	210
5.2.1	Preliminaries	211
5.2.2	The Single-Input Case	213
5.2.3	The Multi-variable Case	216
5.2.4	Control Computation and Implementation	219
5.3	A Parameterized LMI Approach	224
5.4	Multi-objective Control: Eigenvalues Placement and Guaranteed Cost	230
5.4.1	Preliminaries	230
5.4.2	The Single-Input Case	233
5.4.3	The Multi-variable Case	238
5.5	Disturbance Tolerance	243
5.5.1	Preliminaries	245
5.5.2	τ -Parameterized Control	247
5.5.3	Control Law Computation and Implementation	251
5.6	Nonlinear Bounded Control for Time-Delay Systems	255
5.6.1	Problem Statement	255
5.6.2	Preliminaries	256
5.6.3	Riccati Equation Approach	257
5.6.4	LMI Approach	260
5.7	Conclusion	264
 Part III Anti-windup		
6	An Overview of Anti-windup Techniques	267
6.1	Introduction—Philosophy	267
6.2	General Anti-windup Architecture	268
6.3	A Bit of History	271
6.4	Formulation of Problems	274

6.5	Regional (Local) Versus Global Strategies	278
6.5.1	A Quick Overview in the Regional (Local) Context	278
6.5.2	A Quick Overview in the Global Context	279
6.6	Mismatch-Based Anti-windup Synthesis	280
6.7	Conclusion	281
7	Anti-windup Compensator Synthesis	283
7.1	Introduction	283
7.2	Problems Setup	283
7.2.1	Direct Linear Anti-windup	285
7.2.2	Model Recovery Anti-windup	286
7.3	Direct Linear Anti-windup Design	287
7.3.1	Preliminary Elements	288
7.3.2	DLAW Schemes with Global Stability Guarantees	290
7.3.3	DLAW Schemes with Regional Stability Guarantees	294
7.3.4	Some Algorithms	297
7.4	Model Recovery Anti-windup Design	300
7.4.1	Preliminary Elements on the Architecture	300
7.4.2	Some Algorithms	302
7.5	Anti-windup Algorithms Summary	304
7.6	Some Extensions	305
7.6.1	Rate Saturation	306
7.6.2	Sensor Saturations	306
7.6.3	Nested Saturations	307
7.6.4	Time-Delay Systems	308
7.6.5	Anti-windup for Nonlinear Systems	309
7.7	Conclusion	309
8	Applications of Anti-windup Techniques	311
8.1	Introduction	311
8.2	Static Anti-windup Examples	311
8.3	Dynamic Anti-windup Examples	315
8.4	Toward More Complex Nonlinear Actuators	324
8.4.1	Actuator with Position and Rate Saturations	325
8.4.2	Dynamics Restricted Actuator	330
8.4.3	Electro-Hydraulic Actuator	335
8.5	Pseudo Anti-windup Strategies when the Dead-Zone Element is not Accessible	339
8.5.1	Anti-windup Scheme Using a Fictitious Linear Element	339
8.5.2	Observer-Based Anti-windup Scheme	343
8.6	Conclusion	351
	Appendix A Some Concepts Related to Stability Theory	353
A.1	Introduction	353
A.2	Stability of Linear Autonomous Systems	354
A.3	Stability for Nonlinear Systems	355
A.3.1	Stability Definition (Lyapunov Stability)	355

A.3.2	Lyapunov's Stability Theorem	357
A.3.3	The Invariance Principle	359
A.3.4	Region of Attraction	360
A.3.5	Set of Equilibrium Points	361
A.4	Application of Lyapunov Stability	361
A.4.1	Absolute Stability	362
A.4.2	Positive Real Function Concept	363
A.4.3	Circle Criterion	364
A.4.4	Popov Criterion	365
A.4.5	Quadratic Stability	366
Appendix B Quadratic Approach for Robust Control		367
B.1	Introduction	367
B.2	Uncertain Models and Quadratic Stability	368
B.2.1	Uncertain Models	368
B.2.2	Quadratic Stability	370
B.3	Quadratic Stabilizability	373
B.3.1	P-Uncertainty	374
B.3.2	NB-Uncertainty	375
B.4	Guaranteed Cost Control	377
B.4.1	P-Uncertainty	379
B.4.2	NB-Uncertainty	380
B.5	Pole Placement	382
B.5.1	Pole Placement in a Disk	382
B.5.2	Pole Placement in LMI Regions	385
Appendix C Linear Matrix Inequalities (LMI) and Riccati		
Equations		389
C.1	Introduction	389
C.2	Algebraic Lyapunov Equation (ALE)	389
C.2.1	Continuous Algebraic Lyapunov Equation (CALE) [414]	390
C.2.2	Discrete Algebraic Lyapunov Equation (DALE) [414]	391
C.3	Algebraic Riccati Equation (ARE)	392
C.3.1	Continuous Algebraic Riccati Equation (CARE) [414]	392
C.3.2	Discrete Algebraic Riccati Equation (DARE) [414]	395
C.4	Linear Matrix Inequalities (LMI)	397
C.5	Schur's Complement	398
C.6	Bilinear Matrix Inequalities (BMI)	400
C.6.1	Eigenvalues and Generalized Eigenvalues Problems	401
C.7	The Elimination Lemma and the S-Procedure	403
C.7.1	The Elimination Lemma [45]	403
C.7.2	The S-Procedure [45]	404
C.8	Ellipsoids and Polyhedral Sets	405
C.8.1	Ellipsoid and Invariant Ellipsoid [291, 346]	405
C.8.2	Convex Polyhedron and Invariant Polyhedron [135, 136, 344]	406

C.8.3	Maximum Volume Ellipsoid Contained in a Symmetric Polytope	407
C.8.4	Smallest Volume Ellipsoid Containing a Symmetric Polytope	408

Stability and Stabilization of Linear Systems with
Saturating Actuators

Tarbouriech, S.; Garcia, G.; Gomes da Silva Jr., J.M.;
Queinnec, I.

2011, XXI, 430 p., Hardcover

ISBN: 978-0-85729-940-6
