1	Definition and History of ADHD	1
	Brain Damage Syndromes	1
	Alternative Terms for ADHD	2
	Evolution of Present Concept of ADHD	2
	Diagnostic Criteria for ADHD Subtypes	3
	Further Diagnostic Criteria	3
	ADHD, a Continuum or Medical Syndrome	4
	ADHD, a Medical Deficit or Social Deviance	4
	Prevalence of ADHD and Gender Factor	5
	Age of Onset of ADHD	5
	Summary	6
	References	6
2	Causative Factors	9
	Etiological Classification	9
	Evidence for a Neurological Basis for ADHD	10
	Role of Genetic Factors in Etiology of ADHD	12
	Chromosomal Anomalies Associated with ADHD	14
	Molecular Genetic Studies	14
	Environmental Factors in Etiology	14
	Role of Adverse Home and School Environments	15
	ADHD in Adopted Children	15
	Biochemical Basis for ADHD	16
	Infectious Causes of ADHD	16
	Perinatal and Early-Life Risk Factors	16
	Postnatal Risk Factors	17
	Head Injury as a Cause of ADHD and Learning Disorders	17
	Hypoglycemia and ADHD	18
	Role of Sugar and Other Dietary Factors in ADHD	18
	Feingold Theory of Food Additives as a Cause of ADHD	19
	Role of Food Allergy in ADHD	20
	Iron Deficiency and ADHD	20
	Role of Zinc in ADHD	21

Iodine Deficiency, Thyroid Function and ADHD	21
Lead Exposure as a Cause of ADHD	22
Cocaine-Exposed Infants at Risk of ADHD	23
Fetal Exposure to Alcohol, Marijuana, or Cigarettes and Increased Risk of ADHD	24
PCBs and Other Environmental Toxins as Potential Causes of ADHD .	24
Role of Diet During Infancy in the Cause of ADHD	26
Summary	26
References	26
3 Symptoms and Signs of ADHD	31
Occasional “Inattentiveness” or an “Attention Deficit Disorder”?	31
Measurement of Attention	32
When Is Hyperactivity Abnormal?	33
Devices Used to Measure Motor Activity	33
“Subtle” or “Soft” Neurological Signs	34
Developmental Coordination Disorder Diagnostic Criteria	36
Relation Between Motor Performance and ADHD	37
Summary	37
References	38
4 Diagnosis and Laboratory Tests	39
Significance of History and Examination	39
Questions Asked of Parent in Making ADHD Diagnosis	40
Physical and Neurological Examinations	40
Indications for an EEG in Children with ADHD	41
Indications for an MRI or CT Scan in a Child with ADHD	41
Blood Tests Sometimes Indicated in ADHD	41
Indications for Electrocardiogram and/or Cardiac Consult	42
Tests of Research Interest Only	43
Early Risk Factors for a Diagnosis of ADHD in Childhood	43
Summary	44
References	44
5 Oppositional, Conduct, and Other ADHD Comorbid Disorders . .	47
Oppositional Defiant Disorder	47
Conduct Disorder	47
Mood Disorders	48
Anxiety Disorders	49
Prevalence of Psychiatric Disorders Among Children with ADHD	49
Relation Between Oppositional Defiant and Conduct Disorders and ADHD	50
Factors That Predispose to Conduct Disorders in Children with ADHD	50

Influence of an Adverse Family Environment on ADHD and Comorbid Disorders	51
Childhood Conduct Disorder and Adult Criminality	51
Relation of Mood and Anxiety Disorders to ADHD	51
ADHD and Drug Abuse Disorders in Adolescents	53
Effect of Stimulant Treatment on Risk of Drug Abuse	53
ADHD and Drug Abuse in Adults Compared to Adolescents	53
Risk of ADHD Persistence into Adolescence	54
ADHD and Risk of Early Cigarette Smoking	54
Neurological Basis for Obsessive Compulsive Disorder	54
Other Comorbid Disorders Associated with ADHD	55
Asperger's Disorder (299.80) and ADHD	55
Sleep Disorders and ADHD	56
Summary	56

Early Signs of Dyslexia	61
The Genetic Factor in Reading Disability	61
Evidence for a Neuroanatomical Basis for Dyslexia	62
Brain Imaging Scanners Used in Dyslexia Research	62
Brain Activation During Reading	63
Evidence for a Visual Pathway Disorder in Dyslexics	64
Articulatory Feedback and Disconnection Theories of Dyslexia	64
Selection of Reading Remediation Methods for Dyslexics	65
Alternative Methods of Reading Remediation	65
Computer-Based Language Exercises	66
Dietary and Pharmacological Therapies	67
Prognosis of Developmental Dyslexia	67
Writing and Arithmetic Learning Disorders	67
Influence of Gender on Attention and Learning Ability	70
Speech and Language Disorders	70
Normal Development of Speech and Language	70
Signs of Language Delay	70
Types of Aphasia and Their Treatment	71
Methods of Treatment of Aphasia	72
Summary	72
References	73
7 Tics, Tourette Syndrome, Seizures, and Headaches	77
Tics and Tourette Syndrome	77
Prevalence of Tourette Syndrome	78
Causes of Tics and Tourette Syndrome	78
Genetics of Tourette Syndrome and Tic Disorders	79
Structural Brain Abnormalities and Tourette Syndrome	79

Relation of Streptococcal Infection to Tics and OCD	80
Evidence for Encephalitis as a Cause of Tourette Syndrome	80
Tourette Syndrome and Risk of Learning Disabilities	81
Bipolar Disorder and Tourette Syndrome	81
Treatment of Tourette Syndrome Complicating ADHD	82
Seizures and ADHD	84
Epilepsies Comorbid with ADHD in Children	84
Prevalence and Significance of EEG Abnormalities with ADHD	85
Stimulant Therapy in Comorbid Epilepsy/ADHD	87
Epileptiform EEG and Transient Cognitive Deficit	87
Cognitive Effects of Antiepileptic Drugs	88
EEG Localization, Epilepsy, and Learning Disability	88
Prevalence of ADHD in Children with Epilepsy	88
Behavior Disorders as a Form of Epilepsy	89
Headache Disorders and ADHD	89
Classification of Headaches	89
Prevalence of Headache in Children	90
Classifications of Headache Diagnoses Compared	91
Diagnostic Modifications for Pediatric Migraine	91
Indications for MRI or CT in Children with Headaches	93
Treatment of Headaches with ADHD	93
Psychological Interventions in Management of Headaches	93

9 Medications for ADHD	111
Stimulant Medications Recommended for Treatment of ADHD	111
Paradoxical Calming Effect of Stimulant Medications	112
Specific Benefits of Stimulant Medication in ADHD	113
ADHD Patients Most Likely to Respond to Stimulant Medication	114
Creativity and Flexibility of Thinking During Treatment with Methylphenidate	114
Relation of the Dose of Methylphenidate to the Response of ADHD Symptoms	114
Twice Daily Versus Three Times Daily MPH Dose Schedule	116
Safety and Effectiveness of Methylphenidate in Preschool Children with ADHD	116
MPH Effectiveness in ADHD Adolescents	117
Child's Perspective of Stimulant Medication and Its Effect on Peer Relations	117
Duration of Action of Immediate-Release and Extended-Release Formulations of Stimulant Medications for ADHD	118
Immediate-Release MPH Formulations	118
Intermediate-Release MPH Formulations	119
Extended-Release MPH Formulations	119
Amphetamine and Other Stimulants	121
Duration of Treatment with Stimulant Medication	122
Long-Term Usage of Stimulants and Outcome of ADHD	122
Continuity of Therapy with Immediate-Release cf Extended-Release Methylphenidate	123
Multimodal Treatment Study of ADHD (MTA)	123
Prolonged Usage of MPH Through Adolescence and Young Adulthood and Risks of Motor Vehicle Accidents Related to ADHD	124
Side Effects of Stimulant Medications	124
Side Effects of Methylphenidate and Their Prevalence	124
Effect of Medication on Growth of Children with ADHD	125
Obesity in Children Untreated for ADHD	127
Mood Changes Sometimes Associated with MPH and Their Avoidance	127

Management of Tics Developing During Stimulant Therapy for ADHD	127
Behavioral Rebound Associated with MPH Treatment for ADHD	128
Methylphenidate and Exacerbation of Seizures	128
Unusual Side Effects of Methylphenidate and Other Stimulants	130
Alternative Medications to Stimulants	131
Indications for the Nonstimulant, Atomoxetine (Strattera [®]), Usage, and Side Effects	132
Long-Term Effects of Strattera [®] on Growth and Blood Pressure in Children with ADHD	132
Dopamine Transporter DAT1 Genotype and Response to Atomoxetine cf Methylphenidate	133
Indications for Clonidine or Guanfacine in ADHD	133
Adverse Effects of Clonidine	134
Guidelines for Use of Clonidine in Treating ADHD	134
Well-Tried Stimulant Medications Versus Novel Less-Established Remedies for ADHD	136
Summary	137
