1	Introduction	1
1.1	Friction in Machines and Mechanisms	2
1.2	Friction in Lead Screw Drives	3
1.3	Outline	5
2	Lead Screws	7
2.1	Screw Threads	7
2.2	Lead Screw Engineering	9
2.3	Lead Screw and Nut: A Kinematic Pair	12
2.4	Effect of Thread Angle	13
3	Some Background Material	17
3.1	Linearized System Equations	17
3.2	Equations of Motion with Contact Forces	19
3.3	Classification of Linear Systems	21
3.4	Stability Analysis	23
3.5	Undamped Systems	25
3.6	The Averaging Method	27
4	Friction-Induced Instability	31
4.1	Negative Damping Instability	31
4.1.1	Periodic Vibration: Pure-Slip Motion	33
4.1.2	Periodic Vibration: Stick-Slip Motion	36
4.1.3	A Numerical Example	40
4.1.4	Further References on Negative Damping	42
4.2	Mode Coupling	42
4.2.1	Example No. 1: Flutter Instability	43
4.2.2	Example No. 2: Mode Coupling	47
4.2.3	Further References on Mode Coupling	50

4.3	Kinematic Constraint Instability	51
4.3.1	Painlevé's Paradox	52
4.3.2	Bilateral Contact	54
4.3.3	Self-Locking	55
4.3.4	An Example of Kinematic Constraint Instability	56
4.3.5	Further References on the Kinematic Constraint Instability Mechanism	66
5	Mathematical Modeling of Lead Screw Drives	67
5.1	Velocity-Dependent Coefficient of Friction	68
5.2	Dynamics of Lead Screw and Nut	69
5.3	Basic 1-DOF Model	71
5.3.1	Inverted Basic Model	72
5.3.2	Basic Model with Fixed Nut	73
5.3.3	Basic Model with Fixed Lead Screw	73
5.4	Antibacklash Nut	73
5.5	Compliance in Lead Screw and Nut Threads	75
5.5.1	Backlash	77
5.6	Axial Compliance in Lead Screw Supports	77
5.6.1	Alternative Formulation	78
5.7	Compliance in Threads and Lead Screw Supports	80
5.8	Rotational Compliance of the Nut	81
5.8.1	Alternative Formulation	82
5.9	Some Remarks Regarding the System Models	83
6	Negative Damping Instability Mechanism	85
6.1	Equation of Motion	85
6.2	Local Stability of the Steady-Sliding State	87
6.2.1	Numerical Examples	88
6.3	First-Order Averaging	89
6.3.1	Assumptions	90
6.3.2	Equation of Motion in Standard Form	90
6.3.3	First-Order Averaging	94
6.3.4	Steady-Sliding Equilibrium Point	96
6.3.5	Nontrivial Equilibrium Points	97
6.3.6	Numerical Simulation Results: Part 1	101
6.3.7	Numerical Simulation Results: Part 2	104
6.4	Conclusions	107
7	Mode Coupling Instability Mechanism	109
7.1	Mathematical Models	109
7.1.1	2-DOF Model with Axially Compliant Lead Screw Supports	110
7.1.2	2-DOF Model with Compliant Threads	111

7.2 Linear Stability Analysis	113
7.2.1 Undamped System	113
7.2.2 Examples and Discussion	115
7.2.3 Damped System	118
7.2.4 Examples and Discussion	120
7.3 Comparison Between the Stability Conditions of the Two Lead Screw Models	122
7.4 Further Observations on the Mode Coupling Instability	124
7.4.1 Frequency and Amplitude of Vibrations	125
7.4.2 Effect of Damping on Mode Coupling Vibrations	128
7.5 Mode Coupling in 3-DOF Lead Screw Model	129
7.6 Conclusions	133
8 Kinematic Constraint Instability Mechanism	135
8.1 Existence and Uniqueness Problem	135
8.2 True Motion in Paradoxical Situations	137
8.3 1-DOF Lead Screw Drive Model	140
8.4 Linear Stability Analysis	141
8.5 Negative Damping	143
8.5.1 Numerical Simulation Results	144
8.6 Kinematic Constraint Instability	145
8.6.1 Numerical Simulation Results	147
8.7 Region of Attraction of the Stable Equilibrium Point	149
8.8 Kinematic Constraint Instability in Multi-DOF System Models	151
8.8.1 2-DOF Model of Sect. 5.6	151
8.8.2 2-DOF Model of Sect. 5.8	154
8.9 Conclusions	156
9 An Experimental Case Study	157
9.1 Preliminary Observations	158
9.2 Mathematical Modeling	162
9.3 Parameter Identification Step 1: Friction and Damping	165
9.4 Parameter Identification Test Setup	169
9.5 Experimental Results: Step 1	170
9.5.1 DC Motor and Gearbox	172
9.5.2 Identification Results	172
9.6 Parameter Identification Step 2: Stiffness and Fine-Tuning	175
9.7 Experimental Results: Step 2	179
9.8 Parameter Studies	182
9.8.1 Effect of Input Angular Velocity	184
9.8.2 Effect of Damping	185
9.8.3 Effect of Stiffness	185
9.9 Conclusions	186

Appendices	189
Appendix A: First Order Averaging Theorem	189
Appendix B: Application of Higher Order Averaging	192
B.1 Equation of Motion in Standard Form	192
B.2 Higher-Order Averaging Formulation	194
B.3 A Numerical Example	198
Appendix C: First-order Averaging Applied to the 2-DOF Lead	
Screw Model with Axially Compliant Supports	199
References	207
Index	213

Friction-Induced Vibration in Lead Screw Drives

Vahid-Araghi, O.; Golnaraghi, F.

2011, X, 214 p., Hardcover

ISBN: 978-1-4419-1751-5
