Preface to the Second Edition	vii
1 Introduction	1
1.1 What Is a Stochastic Process?	1
1.2 Discrete-Time Stochastic Processes	1
1.3 Continuous-Time Stochastic Processes	2
1.4 What Do We Do with a Stochastic Process?	3
2 Discrete-Time Markov Models	5
2.1 Discrete-Time Markov Chains	5
2.2 Examples of Markov Models	7
2.3 Transient Distributions	15
2.4 Occupancy Times	22
2.5 Limiting Behavior	24
2.6 Cost Models	34
2.6.1 Expected Total Cost over a Finite Horizon	35
2.6.2 Long-Run Expected Cost Per Unit Time	37
2.7 First-Passage Times	40
2.8 Case Study: Passport Credit Card Company	44
2.9 Problems	49
3 Poisson Processes	59
3.1 Exponential Random Variables	59
3.2 Poisson Random Variables	66
3.3 Poisson Processes	70
3.4 Superposition of Poisson Processes	74
3.5 Thinning of a Poisson Process	75
3.6 Compound Poisson Processes	76
3.7 Problems	78
4 Continuous-Time Markov Models	85
4.1 Continuous-Time Markov Chains	85
4.2 Examples of CTMCs: I	91

4.3	Examples of CTMCs: II	94
4.4	Transient Analysis: Uniformization	100
4.5	Occupancy Times	105
4.6	Limiting Behavior	110
4.7	Cost Models	119
4.7.1	Expected Total Cost	119
4.7.2	Long-Run Cost Rates	123
4.8	First-Passage Times	125
4.9	Case Study: Cars-R-Us Used Car Dealer	128
	Appendix 4A: Proof Of Theorem 4.3	133
	Appendix 4B: Uniformization Algorithm to Compute $P(t)$	135
	Appendix 4C: Uniformization Algorithm to Compute $M(T)$	137
4.10	Problems	138
5	Generalized Markov Models	147
5.1	Introduction	147
5.2	Renewal Processes	148
5.3	Cumulative Processes	154
5.4	Semi-Markov Processes: Examples	161
5.5	Semi-Markov Processes: Long-Term Analysis	165
5.5.1	Mean Inter-visit Times	165
5.5.2	Occupancy Distributions	169
5.5.3	Long-Run Cost Rates	173
5.6	Case Study: Healthy Heart Coronary Care Facility	175
5.7	Problems	180
6	Queueing Models	189
6.1	Queueing Systems	189
6.2	Single-Station Queues: General Results	190
6.3	Birth and Death Queues with Finite Capacity	197
6.3.1	M/M/1/K Queue	197
6.3.2	M/M/s/K Queue	200
6.3.3	M/M/K/K Queue	202
6.4	Birth and Death Queues with Infinite Capacity	204
6.4.1	M/M/1 Queue	205
6.4.2	M/M/s Queue	207
6.4.3	M/M/ ∞ Queue	210
6.5	M/G/1 Queue	211
6.6	G/M/1 Queue	216
6.7	Networks of Queues	223
6.7.1	Jackson Networks	223
6.7.2	Stability	226
6.7.3	Limiting Behavior	229
6.8	Case Study: Healthy Heart Coronary Care Facility	231
6.9	Problems	236

7	Brownian Motion	247
7.1	Univariate Normal Random Variables	247
7.2	Multivariate Normal Random Variables	250
7.3	Standard Brownian Motion	253
7.4	Brownian Motion	258
7.5	First-Passage Times in an SBM	261
7.6	First-Passage Times in a BM	265
7.7	Cost Models	269
7.8	Black–Scholes Formula	272
7.9	Problems	275
Appendix A	Probability	281
A.1	Probability Model	281
A.2	Conditional Probability	283
A.3	Law of Total Probability	284
A.4	Bayes' Rule	284
A.5	Independence	284
Appendix B	Univariate Random Variables	285
B.1	Discrete Random Variables	286
B.2	Continuous Random Variables	287
B.3	Functions of Random Variables	288
B.4	Expectations	289
Appendix C	Multivariate Random Variables	291
C.1	Multivariate Discrete Random Variables	291
C.2	Multivariate Continuous Random Variables	292
C.3	Marginal Distributions	292
C.4	Independence	293
C.5	Sums of Random Variables	294
C.6	Expectations	295
Appendix D	Conditional Distributions and Expectations	297
D.1	Conditional Distributions	297
D.2	Conditional Expectations	298
D.3	Random Sums	298
	Answers to Selected Problems	299
	Further Reading	309
	Index	311

Introduction to Modeling and Analysis of Stochastic
Systems

Kulkarni, V.G.

2011, XIII, 313 p., Hardcover

ISBN: 978-1-4419-1771-3
