1	Introduction to Optimization in Wireless Networks	1
	Jeff Kennington, Eli Olinick, and Dinesh Rajan	
Part I Background		
2	Introduction to Wireless Communications	9
	Dinesh Rajan	
2.1	Introduction	9
2.1.1	Layered Architecture	10
2.1.2	Digital Communication System	11
2.2	Digital Modulation in Single User Point-to-point Communication .	14
2.3	Information Theoretic Capacity and Coding	18
2.4	Channel Coding	23
2.4.1	Block Codes	24
2.4.2	Convolutional Codes	26
2.5	Multiuser Communication	27
2.5.1	Data Link Layer Random Access Methods	28
2.5.2	Physical layer Multiuser Signaling Schemes	32
2.5.3	Power Control	39
2.6	Advanced Transceiver Methods	42
2.6.1	Multiple Antenna Systems	43
2.6.2	Scheduling, Rate, and Power Control	44
2.7	Conclusions	44
	References	44
3	Channel Models for Wireless Communication Systems	47
	K. V. S. Hari	
3.1	Introduction	47
3.2	Wireless Channel	47
3.3	Propagation Model for Wireless Channel	48
3.4	Mathematical Modeling of Wireless Channels	49

3.4.1	Experiments to Characterize Wireless Channels	50
3.4.2	Rayleigh and Ricean Flat Fading Channels	52
3.4.3	Doppler Spread Due to Relative Motion Between Transmitter and Receiver and Coherence Time	53
3.4.4	Finite Impulse Response Channel Model for Frequency Selective Fading Channels	55
3.4.5	Delay Spread Parameters	55
3.4.6	Decorrelation Distance of the Channel	56
3.5	Channel Models for Systems using Multiple Antennas	57
3.5.1	Spatial Wireless Channel Models using Geometry	57
3.5.2	Geometrically Based Single-Bounce Statistical Models	58
3.6	Conclusion	61
	References	61
4	An Introduction to Integer and Large-Scale Linear Optimization . . .	65
	J. Cole Smith and Sibel B. Sonuc	
4.1	Introduction	65
4.2	Basics of Modeling and Optimization	66
4.2.1	Foundations of Optimization Models	66
4.2.2	Linear Programming Problems	68
4.2.3	Duality	71
4.2.4	Modeling with Nonlinear and Discrete Variables	74
4.2.5	Integer Programming Methods	75
4.3	Large Scale Optimization	81
4.3.1	Benders Decomposition	82
4.3.2	Dantzig-Wolfe Decomposition	87
4.3.3	Lagrangian Optimization	92
4.3.4	Other Methods	94
	References	96
 Part II Optimization Problems for Networks with Infrastructure		
5	Mathematical Programming Models for Third Generation Wireless Network Design	101
	Eli Olinick	
5.1	Introduction	101
5.2	Tower Location and Subscriber Assignment in CDMA Networks	104
5.2.1	The Core Model	104
5.2.2	Challenges in Solving the Core Model	107
5.3	Extensions to the Core Model	107
5.3.1	SIR-Based Power Control	108
5.3.2	Profit Maximization with Minimum-Service Restrictions	109
5.3.3	Infrastructure	110
5.3.4	The Power-Revenue Trade-Off	113
5.3.5	Additional Design Considerations	114
5.4	Solving the Models	116

5.4.1	The Nearest Available Tower Principle	116
5.4.2	Randomized Greedy Search	117
5.4.3	Improving Branch-and-Bound Performance	118
5.4.4	Dealing with Numerical Instability	120
5.4.5	Reducing Problem Size	121
	References	122
6	Optimization Based WLAN Modeling and Design	127
	Jeff Kennington, Jason Kratz, and Gheorghe Spiride	
6.1	Introduction	128
6.2	Literature Survey	129
6.2.1	Site Surveys	129
6.2.2	Coverage Models	130
6.2.3	Channel Assignment	131
6.2.4	Access Point Placement	134
6.2.5	Proprietary Design Tools	134
6.2.6	Current State-of-the-Art	136
6.3	A Maximum Capacity-Oriented Model	136
6.3.1	Solution Techniques for the Capacity-Oriented Model . . .	140
6.3.2	Empirical Analysis	141
6.4	Summary and Conclusions	143
	References	145
7	Spectrum Auctions	147
	Karla Hoffman	
7.1	Introduction	147
7.2	Some Auction Terms and Mechanisms	148
7.3	The First Spectrum Auction: The New Zealand Experiment	152
7.4	Evolution of the US Simultaneous Ascending Auction (SAA) Design	153
7.5	Combinatorial Auction Designs and their Use for Spectrum Allocation	160
7.5.1	Sealed-bid Combinatorial Designs	161
7.5.2	Two Combinatorial Ascending Auction Designs	165
7.6	The Need for Bidder-aide Tools	172
7.7	Conclusions	173
	References	174
8	The Design of Partially Survivable Networks	177
	Syam Menon	
8.1	Introduction	177
8.2	The Single Period Problem	179
8.2.1	Problem Formulation	179
8.2.2	Reduction to a Binary Knapsack Problem	180
8.3	The Multi-period Problem	182
8.3.1	Problem Description and Formulations	182

8.3.2	The Solution Procedure	184
8.3.3	Computational Experiments	188
8.4	The Single Period Problem with Capacity Restrictions	189
8.4.1	A Partitioning Formulation	191
8.4.2	Computational Experiments	194
8.5	Conclusions	194
	References	196

Part III Optimization Problems in Ad Hoc Networks

9	Routing in Mobile Ad Hoc Networks	199
	Khaldou Al Agha and Steven Martin	
9.1	Ad Hoc Networks	199
9.2	What is Routing?	200
9.3	Ad Hoc in the Link Layer	202
9.3.1	Ad Hoc Mode in Wi-Fi	203
9.3.2	Bluetooth Link Layer	205
9.4	Ad Hoc Routing Protocols	207
9.4.1	Introduction to Ad Hoc Routing Protocols	207
9.4.2	Reactive Protocols	208
9.4.3	Proactive Protocols	210
9.5	Quality of Service in Ad Hoc Networks	211
9.5.1	FQMM (Flexible QoS Model for MANETs)	212
9.5.2	CEDAR (Core-Extraction Distributed Ad hoc Routing) ..	213
9.5.3	TBP (Ticket-based Probing)	213
9.5.4	INSIGNIA	214
9.5.5	SWAN (Stateless Wireless Ad hoc Network)	214
9.5.6	QOLSR (Quality of Service for OLSR)	215
9.6	Conclusion	216
	References	216

	Dag Haugland and Di Yuan	
10.1	Introduction	219
10.1.1	Problem Overview	221
10.1.2	Outline of the Chapter	222
10.2	Problem Definitions	222
10.2.1	Notation and Assumptions	222
10.2.2	Minimum Energy Broadcast and Multicast	224
10.2.3	Range Assignment	225
10.2.4	Optimal Trees and Arborescence: Illustrative Example ..	226
10.3	Network Flow Models for MET	228
10.3.1	Models and Analysis	229
10.3.2	Models Based on Incremental Power	232
10.4	Network Flow Models for RAP	233

10.5	A Strong Multi-tree Model for RAP	234
10.5.1	The Model	234
10.5.2	LP Strength	236
10.6	Experimental Results	237
10.6.1	Results for MET	238
10.6.2	Results for RAP	239
10.7	Concluding Remarks	243
	References	244
11	Improving Network Connectivity in Ad Hoc Networks Using Particle Swarm Optimization and Agents	247
	Abdullah Konak, Orhan Dengiz, and Alice E. Smith	
11.1	Introduction	247
11.2	Background	248
11.3	Proposed MANET Management System and Problem Description	250
11.3.1	Objectives and Evaluating Network Connectivity	250
11.3.2	Future User Location Prediction	251
11.3.3	Optimization Problem and Deployment Decision	252
11.4	Particle Swarm Optimization and Implementation	253
11.4.1	Particle Swarm Optimization (PSO)	253
11.4.2	The Optimization Procedure	255
11.4.3	Semi-Intelligent Agent Node Behavior	257
11.5	Computational Experiments	258
11.5.1	Mobility Simulation Environment	259
11.5.2	The Effect of Number of Agents, Future Location Prediction, and Clustering	260
11.5.3	Comparative Performance of the PSO Algorithm	262
11.6	Conclusions	264
	References	265
