

Contents

Contents of Volumes I and III	xi
Preface	xiii
7 Pseudodifferential Operators	1
1 The Fourier integral representation and symbol classes	2
2 Schwartz kernels of pseudodifferential operators	5
3 Adjoints and products	10
4 Elliptic operators and parametrices	15
5 L^2 -estimates	18
6 Gårding's inequality	22
7 Hyperbolic evolution equations	23
8 Egorov's theorem	26
9 Microlocal regularity	29
10 Operators on manifolds	33
11 The method of layer potentials	36
12 Parametrix for regular elliptic boundary problems	47
13 Parametrix for the heat equation	56
14 The Weyl calculus	67
15 Operators of harmonic oscillator type	80
References	88
8 Spectral Theory	91
1 The spectral theorem	92
2 Self-adjoint differential operators	100
3 Heat asymptotics and eigenvalue asymptotics	106
4 The Laplace operator on S^n	113
5 The Laplace operator on hyperbolic space	123
6 The harmonic oscillator	126
7 The quantum Coulomb problem	135
8 The Laplace operator on cones	149
References	171
9 Scattering by Obstacles	175
1 The scattering problem	177
2 Eigenfunction expansions	186
3 The scattering operator	192

4	Connections with the wave equation	197
5	Wave operators	205
6	Translation representations and the Lax–Phillips semigroup $Z(t)$	211
7	Integral equations and scattering poles	218
8	Trace formulas; the scattering phase	232
9	Scattering by a sphere	239
10	Inverse problems I	248
11	Inverse problems II	254
12	Scattering by rough obstacles	266
A	Lidskii’s trace theorem	275
	References	277
10	Dirac Operators and Index Theory	281
1	Operators of Dirac type	283
2	Clifford algebras	289
3	Spinors	294
4	Weitzenböck formulas	300
5	Index of Dirac operators	306
6	Proof of the local index formula	309
7	The Chern–Gauss–Bonnet theorem	316
8	Spin^c manifolds	320
9	The Riemann–Roch theorem	325
10	Direct attack in 2-D	338
11	Index of operators of harmonic oscillator type	345
	References	358
11	Brownian Motion and Potential Theory	361
1	Brownian motion and Wiener measure	363
2	The Feynman–Kac formula	370
3	The Dirichlet problem and diffusion on domains with boundary ...	375
4	Martingales, stopping times, and the strong Markov property	384
5	First exit time and the Poisson integral	394
6	Newtonian capacity	398
7	Stochastic integrals	412
8	Stochastic integrals, II	423
9	Stochastic differential equations	430
10	Application to equations of diffusion	437
A	The Trotter product formula	448
	References	454
12	The $\bar{\partial}$-Neumann Problem	457
A	Elliptic complexes	460
1	The $\bar{\partial}$ -complex	465
2	Morrey’s inequality, the Levi form, and strong pseudoconvexity ...	469
3	The $\frac{1}{2}$ -estimate and some consequences	472

4	Higher-order subelliptic estimates	476
5	Regularity via elliptic regularization	480
6	The Hodge decomposition and the $\bar{\partial}$ -equation	483
7	The Bergman projection and Toeplitz operators	487
8	The $\bar{\partial}$ -Neumann problem on $(0, q)$ -forms	494
9	Reduction to pseudodifferential equations on the boundary	503
10	The $\bar{\partial}$ -equation on complex manifolds and almost complex manifolds	516
B	Complements on the Levi form	527
C	The Neumann operator for the Dirichlet problem	531
	References	535
C	Connections and Curvature	539
1	Covariant derivatives and curvature on general vector bundles	540
2	Second covariant derivatives and covariant-exterior derivatives	546
3	The curvature tensor of a Riemannian manifold	548
4	Geometry of submanifolds and subbundles	560
5	The Gauss–Bonnet theorem for surfaces	574
6	The principal bundle picture	586
7	The Chern–Weil construction	594
8	The Chern–Gauss–Bonnet theorem	598
	References	608
Index	611

Partial Differential Equations II
Qualitative Studies of Linear Equations
Taylor, M.
2011, XXII, 614 p., Hardcover
ISBN: 978-1-4419-7051-0
