

Contents

1	Introduction	1
1.1	Harsh environment applications	2
1.1.1	Combustion monitoring	3
1.1.2	Process control	6
1.1.3	Military and Space Navigation	8
1.1.4	Structural Health Monitoring	9
1.1.5	Space Exploration	14
1.2	SiC properties	15
1.2.1	SiC crystal structure	15
1.2.2	Basic Chemical and Physical Properties	16
1.2.3	Electrical	18
1.2.4	Thermo-mechanical	24
1.3	System integration aspects of SiC materials	26
	References	29
2	SiC Materials and Processing Technology	33
2.1	Material considerations for various applications	33
2.1.1	Electronics (crystallinity, doping, defects, polytype)	33
2.1.2	MEMS (Stress, strain gradient)	35
2.2	Substrate	36
2.2.1	Vapor Phase Growth	37
2.2.2	Solution Phase Growth	44
2.2.3	Growth Related Issues	46
2.2.4	Current Status	51
2.3	Epitaxial Thin Films	53
2.3.1	Vapor Phase Epitaxy (VPE)	53
2.3.2	Liquid-Phase Epitaxy (LPE)	64
2.3.3	Vapor-Liquid-Solid Epitaxy (VLS)	64
2.3.4	Current Status of SiC Epitaxial Wafers	65
2.4	Polycrystalline SiC and Amorphous SiC Films	66
2.4.1	APCVD	67

2.4.2	LPCVD	67
2.4.3	PECVD	74
2.4.4	Ion Beam Assisted Deposition	75
2.4.5	Other Deposition Methods	78
2.5	Patterning of SiC	80
2.5.1	Dry Etching of SiC	80
2.5.2	Wet Etching of SiC	82
2.5.3	Molding	83
2.5.4	Other Patterning Methods for SiC	84
2.6	Planarization and Surface Preparation	85
2.6.1	Lapping and Mechanical Polishing	85
2.6.2	Chemomechanical Polishing	86
2.6.3	Surface Preparation	87
	References	87
3	Silicon Carbide Electronics	97
3.1	General semiconductor process flow	97
3.2	Ion implantation doping	100
3.3	Contacts to SiC	102
3.3.1	Ohmic contacts	103
3.3.2	Schottky contacts	105
3.4	Electronics for high power applications	106
3.4.1	Schottky Rectifier	106
3.4.2	JBS Rectifier	109
3.4.3	TSBS Rectifier	111
3.4.4	P-i-N Rectifier	111
3.4.5	MPS Rectifier	112
3.4.6	BJT	114
3.4.7	SIAFET	116
3.4.8	Power MOSFET	116
3.5	Sensor interface electronics for high temperature applications	117
3.5.1	MOSFET and MESFET considerations	118
3.5.2	JFET	119
3.5.3	BJT	120
3.6	Electronics for communication electronics	121
	References	122
4	SiC MEMS devices	125
4.1	SiC MEMS processing	125
4.1.1	Surface (thin-film) micromachining	126
4.1.2	Bulk micromachining	129
4.2	Devices and operation in harsh environment	132
4.2.1	Strain	132
4.2.2	Pressure	138
4.2.3	Inertial Sensing	144

4.2.4	Chemical	149
4.2.5	Photo and Radiation Detectors	154
4.2.6	Temperature	154
4.3	Material aspect of harsh environment operation	155
4.3.1	CTE of layers and effect	156
4.3.2	Stress gradient and stress relaxation	159
4.3.3	Design for high g-shock survivability	160
	References	163
5	Packaging	167
5.1	Zero-level MEMS Packaging	168
5.1.1	Bonding Techniques	170
5.1.2	Deposition Techniques	173
5.2	First-level MEMS Packaging	182
5.2.1	Thermal Expansion Matching of First-level Packaging Materials	183
5.2.2	Electrical Interconnects	184
	References	186
6	System Integration	189
6.1	SiC MEMS and SiC Electronics Integration	189
6.1.1	Multi-chip Hybrid Approach	190
6.1.2	Monolithic Fabrication Approach	191
6.2	Power	200
6.2.1	Standalone Power Sources	201
6.2.2	Environmental Power Scavengers	205
6.2.3	Remote Powering (RF powering)	215
6.3	Communication	217
6.4	Testing of Harsh Environment Electronics, MEMS and Microsystems	217
6.4.1	High Temperature Testing of SiC Electronics	218
6.4.2	High Temperature Testing for SiC MEMS	218
6.4.3	Shock Survivability Testing	220
6.5	Gallium Nitride, A Prospective Material for Harsh Environment Microsystems	221
6.6	Current state and Future Prospective	224
	References	226
	Index	231

Silicon Carbide Microsystems for Harsh Environments

Wijesundara, M.; Azevedo, R.

2011, XVI, 232 p., Hardcover

ISBN: 978-1-4419-7120-3
