

Contents

1	Rationale of C-OAR-SE	1
1.1	Why C-OAR-SE?	1
1.2	The $C \rightarrow M \rightarrow S$ Structure of Measurement	3
1.3	New True-Score Model: $O = T + D_m + E_r$, Where D_m Is Distortion Caused by the Measure and E_r Is Error Caused by the Rater	5
1.4	Researcher-Defined (Psychological) Versus Partly Rater-Defined (Perceptual) Constructs	6
1.5	Ultimate Dependence on Rational Expert Judgment for Defining Constructs	8
1.6	The Construct Definition Depends on the Role of the Construct in the Theory	9
1.7	End-of-Chapter Questions	10
2	Validity and Reliability	13
2.1	Content Validity (CV) Not “Construct Validity”	13
2.2	Why MTMM Is Wrong	15
2.3	Item-Content Validity (CV_{item}) and How to Establish It	16
2.4	Answer-Scale Validity (CV_{answer}) and How to Establish It	19
2.5	The Desirability of Predictive Validity (PV) and the True Population Correlation (R_{pop})	22
2.6	Why Coefficient Alpha Is Wrong	24
2.7	Stability-of-Scores Reliability ($R_{stability}$)	25
2.8	Precision-of-Scores Reliability ($R_{precision}$)	26
2.9	End-of-Chapter Questions	28
3	Object Classification and Measures	29
3.1	The Importance of Valid Object Representation in the Measure	30
3.2	Concrete Object (CONCOB): Iconic Representation	32
3.3	Abstract Collective Object (COLLOB): Representative Sample of Constituents	33
3.4	Abstract Formed Object (FORMOB): Set of Main Meanings	35
3.5	End-of-Chapter Questions	38

4	Attribute Classification and Measures	41
4.1	New Fourfold Classification of Attributes	41
4.2	Concrete Perceptual Attribute (CONCPERC): One Good Self-Rated Item	42
4.3	Concrete Psychological Attribute (CONCPSY): One Good Researcher-Rated Item	47
4.4	Abstract Achieved Attribute (ABACHD): One Good Item per Defined First-Order Component	48
4.5	Abstract Dispositional Attribute (ABDISP): Several Good Items per Defined Second-Order Component	53
4.6	The Serious Problem of Mislabeling Abstract Attributes	57
4.7	Attributes Can Change Status According to Their Role in the Theory	59
4.8	End-of-Chapter Questions	59
5	Rater Entity Classification	61
5.1	Why the Rater Entity in the Construct Makes It a Different Construct Even If the Object and Attribute Are the Same	62
5.2	Experts as the Rater Entity (EXPRAT)	63
5.3	Coders as the Rater Entity (CODRAT)	65
5.4	Managers as Group Rater Entity (MANRAT)	65
5.5	Consumers as Group Rater Entity (CONRAT)	66
5.6	Individuals as Rater Entity (INDRAT)	68
5.7	End-of-Chapter Questions	70
6	Selection of Item-Type and Answer Scale	73
6.1	A Model of Item Variables	74
6.2	Attribute Beliefs (or Perceptions)	75
6.3	Evaluative Beliefs (or Attitudes, Plural)	78
6.4	Emotions (Type 1 and Type 2)	82
6.5	Overall Attitude (Singular)	86
6.6	Motives (Conscious and Subconscious)	87
6.7	Personality Traits and States (and Types)	90
6.8	Abilities (General Intelligence, Creative Ability)	93
6.9	Knowledge Tests	98
6.10	End-of-Chapter Questions	100
7	Enumeration and Scoring Rule	103
7.1	Objects or Raters as the Units of Analysis	103
7.2	Enumeration of Ratings on Unipolar and Bipolar Attributes	105
7.3	Sum Scoring Rule	106
7.4	Average Scoring Rule	107
7.5	Cutoffs or Profile Scoring Rule	107
7.6	Multiplicative Scoring Rule	112
7.7	Alternative Group-Scoring Rules	113
7.8	End-of-Chapter Questions	114

8	Qualitative Research from a C-OAR-SE Perspective	115
8.1	Types of Qualitative Research	118
8.2	Analytic Qualitative Research (AQR)	119
8.3	Methodologies of Qualitative Research	121
8.4	First-Order and Higher-Order Data	125
8.5	Modes of Analysis in Qualitative Research	126
8.6	Analytic Qualitative Research Compared with Quantitative Research	131
8.7	Summary	137
8.8	End-of-Chapter Questions	138
9	DROAVR Application Checklist	141
9.1	Definition (Within Theory) of the Construct	141
9.2	Rater Entity Identified	142
9.3	Object Correctly Represented	143
9.4	Attribute Components Formatively Specified	143
9.5	Validity (Content Validity) Rationally Argued	144
9.6	Reliability (Precision) of Scores Reported	146
Appendix A		147
Appendix B		151
Appendix C		153
