Part I Introductory Aspects

1	Crystals and Melts	3
1.1	Crystals	3
1.2	Melts	4
1.2.1	Viscosity of Melts	5
1.3	Comparison of Crystalline and Melt Structures	8
1.3.1	RDFs and Local Atomic Densities	9
1.3.2	Radial Distribution Functions (RDFs)	10
1.4	Structure of Melts	10
1.4.1	RDFs in Monatomic Melts	10
1.4.2	RDFs in Molecular Melts	12
1.5	Theoretical Estimates of RDFs	14
1.5.1	Atomic Coordination in Melts	15
1.5.2	Atomic Packing	17
1.5.3	Bonding in Liquids	18
1.5.4	Influence of Temperature on RDFs	19
1.6	Theories of Melting and the Liquid State	20
1.6.1	Lattice Vibrational Instability	20
1.6.2	Hole Theories of Liquids	21
1.7	Summary	23
	References	24
2	Thermodynamics of Crystal-Melt Phase Change	27
2.1	Enthalpy: Heat and Work Exchanges in Solid-Liquid Transformations	27
2.2	Comparison of Terms in ΔH_f	31
2.3	Co-existence of Solids and Melts	32
2.3.1	Solid-Melt Critical Point	34
2.4	Thermal Supercooling and Metastability	34
2.4.1	Characteristic Melt Supercooling	37
2.5	Free Energy Changes During Freezing and Melting	38

2.5.1	Reversible Solidification	38
2.5.2	Irreversible Solidification	39
2.6	Principal Types of Binary Alloy Solidification	41
2.7	Illustrative Examples	43
2.8	Summary	50
	References	51
3	Thermal Concepts in Solidification	53
3.1	Near-Equilibrium Freezing	53
3.1.1	Preliminary Definitions	53
3.1.2	Energy Balances Within a Freezing System	56
3.1.3	Energy Conservation	57
3.2	Energy Balances at Crystal-Melt Interfaces	60
3.2.1	Stefan's Interface Energy Balance	60
3.2.2	Fourier's Law of Heat Conduction	62
3.2.3	Thermal Conduction	64
3.2.4	Newton's Law of Cooling: Heat Transfer Coefficients	65
3.2.5	Interfacial Gradients	66
3.3	Summary	68
	References	68
4	Solidification of Pure Materials	69
4.1	Quasi-static Theory	69
4.1.1	Introduction	69
4.1.2	Analysis of 1-Dimensional Freezing	71
4.1.3	Quasi-static Results	75
4.1.4	Solidification of a Circular Cylinder	76
4.2	Moving Boundary Analysis	80
4.2.1	Introduction	80
4.2.2	Conduction-Advection	81
4.2.3	Neumann's Solution: Semi-infinite Freezing	85
4.3	Summary	96
	References	97

Part II Macrosegregation

5	Solute Mass Balances: Macrosegregation	101
5.1	Local and Global Interfacial Equilibrium	101
5.1.1	Introduction	101
5.1.2	The Distribution Coefficient, k_0	103
5.2	Solute Rejection at the Solid-Liquid Interface	106
5.2.1	Interfacial Solute Balance	106
5.3	Gulliver-Scheil Macrosegregation Theory	109
5.3.1	Determination of the Distribution Coefficient	110

5.4	Macrosegregation with Solid–State Diffusion	113
5.4.1	Solid-State Diffusion	113
5.4.2	Mass Balances with Solid–State Diffusion	114
5.4.3	Time Dependence of Fraction Solidified	116
5.4.4	Solutal Fourier Number	118
5.5	Limits of the Brody–Flemings Solute Balance	120
5.6	Binary Alloy Segregation Curves	121
5.6.1	Gulliver–Scheil Segregation: Solubility Limits	121
5.6.2	Influence of the Fourier Number	122
5.7	Purification via Freezing	123
5.7.1	Fractional Crystallization	123
5.7.2	Chemical Purity	124
5.7.3	Why Pure Materials?	124
5.7.4	Cyclic Unidirectional Solidification	125
5.8	Zone Refining	129
5.8.1	Single Zone Pass: Pfann’s Equation	129
5.8.2	Multipass Zone Refining	133
5.9	Summary	143
	References	143
6	Plane-Front Solidification	145
6.1	Introduction	145
6.1.1	Steady-State Macrosegregation	146
6.1.2	Steady-State Plane-Front Freezing	146
6.1.3	Solute Boundary Layers	152
6.2	Transient Macrosegregation	154
6.2.1	Initial Transients in Infinite Systems	155
6.2.2	Transients in Finite Systems	158
6.2.3	Final Segregation Transient	159
6.3	Numerical Studies in Finite Systems	160
6.4	Summary	161
	References	161
7	Composition Control	163
7.1	Convection in Freezing Melts	163
7.1.1	Mixing Limits	163
7.1.2	The BPS Model	166
7.1.3	Solution to the BPS Transport Equations	167
7.2	Effective Distribution Coefficients	171
7.2.1	Definition and Role of Effective Distribution Coefficients	171
7.2.2	Results from BPS Theory	173
7.3	Summary	175
	References	176

Part III Solid–Liquid Interfaces: Capillarity, Stability, Nucleation

8	Crystal–Melt Interfaces	181
8.1	Capillarity	181
8.1.1	Background	181
8.2	Planar and Curved Interfaces	183
8.2.1	Surface Patches	184
8.2.2	Curvatures	185
8.2.3	Kinematics of Interfacial Deformation	187
8.2.4	Interfaces	193
8.2.5	Interfacial Energy	196
8.3	Gibbs–Thomson Effect	199
8.3.1	Equilibrium at Curved Interfaces	199
8.3.2	Chemical Potentials at Curved Interfaces	202
8.3.3	Interfacial Shapes	204
8.3.4	Kelvin’s Equation	205
8.4	Summary	211
	References	211
9	Constitutional Supercooling	213
9.1	Introductory Remarks	213
9.2	Background	214
9.3	Decanting Studies	214
9.3.1	Interfacial Instabilities in Single Crystals	215
9.3.2	Interfacial Instabilities in Polycrystals	216
9.4	Constitutional Supercooling	221
9.4.1	Introduction	221
9.4.2	The Interfacial Solute Mass Balance	221
9.4.3	Constitutional Gradient	223
9.4.4	Stable Interfaces	224
9.4.5	Unstable Interfaces	225
9.4.6	Marginal Stability	226
9.4.7	Bulk Crystal Growth: Limiting Forms for Stability	229
9.5	Verification of Constitutional Supercooling	230
9.5.1	Experiments	231
9.6	Summary	234
	References	235
10	Linear Morphological Stability	237
10.1	Introduction	237
10.2	Perturbation Theory	238
10.2.1	Stability of Planar Interfaces	239
10.3	Steady-State Plane-Front Freezing	240
10.3.1	Boundary Conditions	240

10.3.2	Transport Field Equations	241
10.3.3	Perturbation Analysis: The Concept	241
10.3.4	The Transport Solutions	242
10.3.5	Local Interfacial Equilibrium	246
10.3.6	Linearization of the Curvature	247
10.3.7	Interfacial Flux Balances	247
10.3.8	Solutions to the Field Equations	248
10.4	Stability Criteria	249
10.4.1	Amplitude Evolution	250
10.4.2	Criteria for Interfacial Stability	251
10.4.3	Marginal Stability	252
10.5	Low Wavenumber Limit	254
10.6	General Stability Analysis	254
10.6.1	Marginal Wavenumber	256
10.7	Experimental Validation	257
10.8	Absolute Stability	258
10.9	Summary	260
	References	261
11	Non-linear Stability Models	263
11.1	Limitations of Linear Stability	263
11.2	Interfacial Patterns Just Beyond Marginal Stability	264
11.3	Patterns Further from the Margin of Stability	264
11.4	Morphological Stability Maps	266
11.5	Absolute Stability in the Non-linear Regime	268
11.6	Plan-Forms of Instabilities	269
11.7	Summary	271
	References	272
12	Nucleation Catalysis	273
12.1	Introduction	273
12.2	Fluctuation-Dissipation	274
12.3	Heterogeneous Equilibrium	275
12.3.1	Free Energy Changes for Nucleation	277
12.4	Homogeneous Nucleation	278
12.4.1	Free Energy Barrier	279
12.5	Heterogeneous Nucleation	283
12.5.1	Background	283
12.5.2	Spherical Cap Model	284
12.5.3	Heterophase Fluctuations on a Substrate	289
12.6	Grain Refinement	290
12.6.1	Inoculants	291
12.6.2	Substrate Area, Contact Angle, and Phase Spreading	293
12.6.3	Accommodation Strains	294

12.6.4	Athermal Heterogeneous Nucleation	295
12.6.5	Melt Flow Control and Cavitation	298
12.7	Summary	300
	References	301

Part IV Microstructure Evolution

13	Dendritic Growth	305
13.1	Introduction	305
13.1.1	Some Early History	306
13.2	Dendrites in Metals Processing	306
13.2.1	Observations and Simulation of Dendritic Growth . . .	307
13.2.2	Initiation of Dendritic Growth	308
13.2.3	Directional Solidification	309
13.3	Dendrites in Castings	311
13.4	Dendritic Growth Theory	312
13.4.1	Ivantsov's Transport Model	313
13.4.2	Ivantsov's Transport Solution	317
13.5	Dendritic Boundary Layers	320
13.5.1	Boundary Layer Thickness	320
13.5.2	Boundary Layers at Small Péclet Numbers	321
13.5.3	Boundary Layers at Large Péclet Numbers	322
13.6	Dendritic Capillarity	324
13.7	Marginal Stability Hypothesis	326
13.7.1	Estimating v and R_{tip}	327
13.8	Dendritic Growth Experiments	328
13.8.1	Velocity Experiments	328
13.8.2	Gravitational Effects	328
13.8.3	Stability Constants for Dendritic Growth	330
13.9	Stochastics and Determinism	332
13.9.1	Background	332
13.9.2	Anisotropic Capillarity	333
13.9.3	Energy Anisotropy	334
13.9.4	Shape Anisotropy	334
13.9.5	Deterministic Dynamics: Two Dimensions	338
13.9.6	Deterministic Dynamics: Three Dimensions	340
13.10	Summary	341
	References	342
14	Microsegregation	345
14.1	Introduction	346
14.2	Cellular Microsegregation	346
14.2.1	Key Assumptions	346

14.2.2	Intercellular Solute Mass Balance	347
14.3	Dendritic Microsegregation	355
14.3.1	Microsegregation in Mushy Zones	356
14.4	Influence of Solid-State Diffusion	358
14.4.1	Solute Mass Balances in Mushy Zones	358
14.5	Structure of Castings	365
14.6	Summary	367
	References	367
15	Interface Structure and Growth Kinetics	369
15.1	Introduction	369
15.1.1	Faceted Interfaces	370
15.1.2	Non-faceted Interfaces	372
15.2	Two-Layer Interface Model	374
15.2.1	Background	374
15.2.2	Energy Changes for Interfacial Configurations	374
15.3	Kinetic Theories	382
15.3.1	Atomically Rough Interfaces	383
15.3.2	Molecularly Smooth Interfaces	387
15.4	Kinetic Roughening	389
15.4.1	Introduction	389
15.4.2	Interface Diffuseness	390
15.4.3	Roughening Transition	390
15.4.4	Experiments	391
15.5	Summary	393
	References	395
16	Polyphase Solidification	397
16.1	Introduction	397
16.2	Eutectics	398
16.2.1	Thermodynamics: Polyphase Solidification	398
16.2.2	Classification of Eutectics	400
16.2.3	Importance of Eutectics	402
16.2.4	Nucleation of Eutectics	403
16.2.5	Growth of Eutectics	404
16.2.6	Tiller's Theory of Eutectic Growth	405
16.2.7	Eutectic Phase Spacing	412
16.3	Hunt-Jackson Theory of Eutectics	414
16.4	Eutectic Microstructures	415
16.4.1	Lamellar Eutectics	415
16.4.2	Rod Eutectics	416
16.4.3	Lamellar-to-Rod Transition	418
16.4.4	Crystallography of Lamellar Eutectics	420
16.5	Computation of Eutectic Microstructures	421

16.6	Directional Freezing of Polyphase Alloys	421
16.7	Cast Iron	424
16.8	Summary	424
	References	425
17	Rapid Solidification Processing	427
17.1	Introduction	427
17.2	Background	428
17.2.1	Splat Quenching of Alloys	428
17.3	Early Research in Rapid Solidification	429
17.3.1	Non-equilibrium Phase Diagrams	429
17.3.2	Hypercooling	429
17.3.3	Thermodynamic Limits	434
17.4	Solute Trapping	434
17.4.1	Interface Non-equilibrium	434
17.4.2	Laser Melting	435
17.5	Theory	436
17.5.1	Introduction	436
17.5.2	Continuous Growth Models	437
17.5.3	Response Functions	438
17.5.4	Quantitative RSP Experiments	439
17.6	Summary	442
	References	445
 Part V Appendices		
A	Thermodynamic Functions and Legendre Transforms	449
B	Grain Boundary Grooves	459
	References	465
C	Deterministic Simulation of Dendritic Growth	467
	References	474
D	Directional Solidification Techniques	475
	References	479
E	Hunt–Jackson Theory of Eutectics	481
	References	497
Index	499

Principles of Solidification

An Introduction to Modern Casting and Crystal Growth
Concepts

Glicksman, M.E.

2011, XVIII, 520 p., Hardcover

ISBN: 978-1-4419-7343-6
