1	Introduction	1
2	Negative Differential Resistance of Oligo (Phenylene Ethynylene) Self-Assembled Monolayer Systems: The Electric Field Induced Conformational Change Mechanism	9
2.1	Introduction	9
2.2	Simulation Details	10
2.2.1	Computational Details of QM Calculations	10
2.2.2	Conductivities of P and T Conformations (NEGF Calculations)	11
2.2.3	Coarse-Grained NN Interacting Hamiltonian	11
2.2.4	Extracting NN Model Parameters from QM/FF Energies	11
2.2.5	Coarse-Grained MC Simulations	13
2.3	Results and Discussion	14
2.3.1	Two Conformations of AN-OPE	14
2.3.2	Electrical Conductivities of P and T	16
2.3.3	Response to Constant External Field	18
2.3.4	NDR for Time Dependent Electric Field	23
2.4	Conclusions	25
	Bibliography	25
3	Free Energy Barrier for Molecular Motions in Bistable [2]Rotaxane Molecular Electronic Devices	27
3.1	Introduction	27
3.2	Simulation Details	29
3.2.1	Potential of Mean Force from Constrained Molecular Dynamics Simulation	29
3.2.2	Constrained Molecular Dynamics Simulation	31
3.2.3	Force Field and MD Parameters	32
3.3	Results and Discussion	35
3.3.1	Charge Scheme: Adiabatic Approximation	35
3.3.2	Free Energy Profiles from PMF Calculations	36

3.4	Conclusions.....	42
	Bibliography	42
4	Sodium Diffusion Through Aluminum-Doped Zeolite BEA System: Effect of Water Solvation	47
4.1	Introduction.....	47
4.2	Simulation Details	48
4.2.1	Force Field	48
4.2.2	Grand Canonical Monte Carlo (GCMC) Method and Molecular Dynamics (MD) Simulation	50
4.2.3	Construction of Models and Calculation of Properties	50
4.3	Results and Discussion	51
4.3.1	Water Absorption	51
4.3.2	Structure of Water in Zeolite	53
4.3.3	Effect of Water Contents on Sodium Diffusion	54
4.3.4	Effect of Temperature on Sodium Diffusion.....	57
4.4	Conclusions.....	61
	Bibliography	62
5	Experimental and Theoretical Investigation into the Correlation Between Mass and Ion Mobility for Choline and Other Ammonium Cations in N₂	65
5.1	Introduction.....	65
5.2	Experimental Section	68
5.2.1	Chemicals and Reagents	68
5.2.2	Electrospray Ionization Ion Mobility Spectrometer	68
5.2.3	Computational Modeling	69
5.3	Results	70
5.3.1	Mass-Mobility Correlation of Ammonium Cations	70
5.3.2	Tertiary and Quaternary Ammonium Cations with Similar Molecular Weights	72
5.3.3	Functional Group Isomers of Ammonium Cations	73
5.3.4	Collision Cross-Sections of Ions in N ₂ via the Trajectory Method	74
5.4	Discussion	75
5.4.1	Classical Ion-Neutral Collision Model	75
5.4.2	Computational Trajectory Method	76
5.4.3	Ion-Quadrupole Potential	76
5.4.4	Ion-Induced Dipole Potential	78
5.4.5	Van der Waals Potential	79
5.4.6	Mass-Mobility Correlation	79
5.5	Conclusions.....	82
	Bibliography	82

6	Structural Characterization of Unsaturated Phospholipids Using Traveling Wave Ion Mobility Spectrometry	85
6.1	Introduction	85
6.2	Experimental Section	87
6.2.1	Chemicals and Reagents	87
6.2.2	Electrospray Ionization Traveling Wave Ion Mobility Mass Spectrometer	88
6.2.3	Collision Cross-Section Calibration	89
6.2.4	Computational Modeling	89
6.3	Results	90
6.3.1	Saturated Phosphatidylcholine Cations	90
6.3.2	Unsaturated Phosphatidylcholine Cations	91
6.3.3	Sodiated Phosphatidylcholine Cations	91
6.3.4	Estimated Collision Cross-Sections of Ions Using T-Wave Calibration	93
6.3.5	Determination of Collision Cross-Sections of Ions	93
6.3.6	Calculated Collision Cross-Sections of Ions Using the Trajectory Method	96
6.4	Discussion	97
6.4.1	Effect of Drift Gas on Ion Mobility	97
6.4.2	Geometrical Effect on the Collision Cross-Sections of Phosphatidyl- choline Cations	98
6.4.3	Mass-Mobility Correlations of Phosphatidylcholine Cations	100
6.4.4	Characterizing Unsaturated Phosphatidylcholines from Mass-Mobility Correlation	102
6.5	Conclusions	103
	Bibliography	104
7	Interfacial Reactions of Ozone with Lipids and Proteins in a Model Lung Surfactant System	107
7.1	Introduction	108
7.2	Methods	111
7.2.1	Chemicals and Reagents	111
7.2.2	Online FIDI-MS Technique and Heterogeneous Oxidation by O ₃	111
7.2.3	Molecular Dynamic Simulations	111
7.3	Results and Discussion	112
7.3.1	Interfacial Reaction of POPG with O ₃	112
7.3.2	Interfacial Oxidation of SP-B ₁₋₂₅	114
7.3.3	Oxidation of SP-B ₁₋₂₅ in POG Monolayer by O ₃	116
7.3.4	Interactions of SP-B ₁₋₂₅ in a Lipid Monolayer	116
7.4	Conclusions	119
	Bibliography	122

8 Appendices	125
8.1 Appendix A: Discussions on Coarse-Graining of Time- and Length-Scale in Monte Carlo Simulations for AN-OPE SAM	125
8.1.1 Time-Scale	125
8.1.2 Length-Scale	125
8.2 Appendix B: Effect of Molecular Fluctuations on the Electrical Conductivity of AN-OPE SAM	126
8.3 Appendix C: NDR in Other OPE-derivative Systems	129
8.3.1 Bare OPE	129
8.3.2 Nitro OPE	129
8.4 Appendix D: Conversion Factor Between External Electric Field and Bias Voltage	131
8.5 Appendix E: Mulliken Charge Distributions of Bistable [2]Rotaxane Molecular Switch Depending on CBPQT ⁴⁺ Ring's Position	131
8.6 Appendix F: Consideration of Metric Effect on the Bistable [2]Rotaxane Molecule During the Constant MD Simulations Using Fixman's Theorem	160
8.7 Appendix G: Time for Consumption of POPG	160
8.8 Appendix H: Bulk-Phase Ozonolysis	161
8.8.1 Methods	161
8.8.2 Results and Discussion	162
Bibliography	166
Index	169

Multiscale and Multiphysics Computational Frameworks
for Nano- and Bio-Systems

Kim, H.

2011, XXVIII, 170 p., Hardcover

ISBN: 978-1-4419-7600-0
