Notation	xxi
1 Introduction	1
1.1 Bibliographic Notes	3
1.2 References	4
2 Returns	5
2.1 Introduction	5
2.1.1 Net Returns	5
2.1.2 Gross Returns	6
2.1.3 Log Returns	6
2.1.4 Adjustment for Dividends	7
2.2 The Random Walk Model	8
2.2.1 Random Walks	8
2.2.2 Geometric Random Walks	8
2.2.3 Are Log Prices a Lognormal Geometric Random Walk?	9
2.3 Bibliographic Notes	10
2.4 References	10
2.5 R Lab	11
2.5.1 Data Analysis	11
2.5.2 Simulations	12
2.6 Exercises	14
3 Fixed Income Securities	17
3.1 Introduction	17
3.2 Zero-Coupon Bonds	18
3.2.1 Price and Returns Fluctuate with the Interest Rate ...	18
3.3 Coupon Bonds	19
3.3.1 A General Formula	20
3.4 Yield to Maturity	21
3.4.1 General Method for Yield to Maturity	22

3.4.2	Spot Rates	23
3.5	Term Structure	24
3.5.1	Introduction: Interest Rates Depend Upon Maturity	24
3.5.2	Describing the Term Structure	24
3.6	Continuous Compounding	29
3.7	Continuous Forward Rates	30
3.8	Sensitivity of Price to Yield	32
3.8.1	Duration of a Coupon Bond	32
3.9	Bibliographic Notes	33
3.10	References	34
3.11	R Lab	34
3.11.1	Computing Yield to Maturity	34
3.11.2	Graphing Yield Curves	36
3.12	Exercises	36
4	Exploratory Data Analysis	41
4.1	Introduction	41
4.2	Histograms and Kernel Density Estimation	43
4.3	Order Statistics, the Sample CDF, and Sample Quantiles	48
4.3.1	The Central Limit Theorem for Sample Quantiles	49
4.3.2	Normal Probability Plots	50
4.3.3	Half-Normal Plots	54
4.3.4	Quantile–Quantile Plots	57
4.4	Tests of Normality	59
4.5	Boxplots	61
4.6	Data Transformation	62
4.7	The Geometry of Transformations	66
4.8	Transformation Kernel Density Estimation	70
4.9	Bibliographic Notes	73
4.10	References	73
4.11	R Lab	74
4.11.1	European Stock Indices	74
4.12	Exercises	77
5	Modeling Univariate Distributions	79
5.1	Introduction	79
5.2	Parametric Models and Parsimony	79
5.3	Location, Scale, and Shape Parameters	80
5.4	Skewness, Kurtosis, and Moments	81
5.4.1	The Jarque–Bera test	86
5.4.2	Moments	86
5.5	Heavy-Tailed Distributions	87
5.5.1	Exponential and Polynomial Tails	87
5.5.2	t -Distributions	88
5.5.3	Mixture Models	90

5.6	Generalized Error Distributions	93
5.7	Creating Skewed from Symmetric Distributions	95
5.8	Quantile-Based Location, Scale, and Shape Parameters	97
5.9	Maximum Likelihood Estimation	98
5.10	Fisher Information and the Central Limit Theorem for the MLE	98
5.11	Likelihood Ratio Tests	101
5.12	AIC and BIC	102
5.13	Validation Data and Cross-Validation	103
5.14	Fitting Distributions by Maximum Likelihood	106
5.15	Profile Likelihood	115
5.16	Robust Estimation	117
5.17	Transformation Kernel Density Estimation with a Parametric Transformation	119
5.18	Bibliographic Notes	122
5.19	References	122
5.20	R Lab	123
	5.20.1 Earnings Data	123
	5.20.2 DAX Returns	125
5.21	Exercises	126
6	Resampling	131
6.1	Introduction	131
6.2	Bootstrap Estimates of Bias, Standard Deviation, and MSE . .	132
	6.2.1 Bootstrapping the MLE of the t -Distribution	133
6.3	Bootstrap Confidence Intervals	136
	6.3.1 Normal Approximation Interval	136
	6.3.2 Bootstrap- t Intervals	137
	6.3.3 Basic Bootstrap Interval	139
	6.3.4 Percentile Confidence Intervals	140
6.4	Bibliographic Notes	144
6.5	References	145
6.6	R Lab	145
	6.6.1 BMW Returns	145
6.7	Exercises	147
7	Multivariate Statistical Models	149
7.1	Introduction	149
7.2	Covariance and Correlation Matrices	149
7.3	Linear Functions of Random Variables	151
	7.3.1 Two or More Linear Combinations of Random Variables	153
	7.3.2 Independence and Variances of Sums	154
7.4	Scatterplot Matrices	155
7.5	The Multivariate Normal Distribution	156
7.6	The Multivariate t -Distribution	157

7.6.1	Using the t -Distribution in Portfolio Analysis	160
7.7	Fitting the Multivariate t -Distribution by Maximum Likelihood	160
7.8	Elliptically Contoured Densities	162
7.9	The Multivariate Skewed t -Distributions	164
7.10	The Fisher Information Matrix	166
7.11	Bootstrapping Multivariate Data	167
7.12	Bibliographic Notes	169
7.13	References	169
7.14	R Lab	169
7.14.1	Equity Returns	169
7.14.2	Simulating Multivariate t -Distributions	171
7.14.3	Fitting a Bivariate t -Distribution	172
7.15	Exercises	173
8	Copulas	175
8.1	Introduction	175
8.2	Special Copulas	177
8.3	Gaussian and t -Copulas	177
8.4	Archimedean Copulas	178
8.4.1	Frank Copula	178
8.4.2	Clayton Copula	180
8.4.3	Gumbel Copula	181
8.5	Rank Correlation	182
8.5.1	Kendall's Tau	183
8.5.2	Spearman's Correlation Coefficient	184
8.6	Tail Dependence	185
8.7	Calibrating Copulas	187
8.7.1	Maximum Likelihood	188
8.7.2	Pseudo-Maximum Likelihood	188
8.7.3	Calibrating Meta-Gaussian and Meta- t -Distributions	189
8.8	Bibliographic Notes	193
8.9	References	195
8.10	Problems	195
8.11	R Lab	195
8.11.1	Simulating Copulas	195
8.11.2	Fitting Copulas to Returns Data	197
8.12	Exercises	200
9	Time Series Models: Basics	201
9.1	Time Series Data	201
9.2	Stationary Processes	201
9.2.1	White Noise	205
9.2.2	Predicting White Noise	205
9.3	Estimating Parameters of a Stationary Process	206
9.3.1	ACF Plots and the Ljung-Box Test	206

9.4	AR(1) Processes	208
9.4.1	Properties of a stationary AR(1) Process	209
9.4.2	Convergence to the Stationary Distribution	211
9.4.3	Nonstationary AR(1) Processes	211
9.5	Estimation of AR(1) Processes	212
9.5.1	Residuals and Model Checking	213
9.5.2	Maximum Likelihood and Conditional Least-Squares ..	217
9.6	AR(p) Models	218
9.7	Moving Average (MA) Processes	222
9.7.1	MA(1) Processes	223
9.7.2	General MA Processes	223
9.8	ARMA Processes	225
9.8.1	The Backwards Operator	225
9.8.2	The ARMA Model	225
9.8.3	ARMA(1,1) Processes	226
9.8.4	Estimation of ARMA Parameters	227
9.8.5	The Differencing Operator	227
9.9	ARIMA Processes	228
9.9.1	Drifts in ARIMA Processes	232
9.10	Unit Root Tests	233
9.10.1	How Do Unit Root Tests Work?	235
9.11	Automatic Selection of an ARIMA Model	236
9.12	Forecasting	237
9.12.1	Forecast Errors and Prediction Intervals	239
9.12.2	Computing Forecast Limits by Simulation	241
9.13	Partial Autocorrelation Coefficients	245
9.14	Bibliographic Notes	247
9.15	References	248
9.16	R Lab	248
9.16.1	T-bill Rates	248
9.16.2	Forecasting	251
9.17	Exercises	251
10	Time Series Models: Further Topics	257
10.1	Seasonal ARIMA Models	257
10.1.1	Seasonal and nonseasonal differencing	258
10.1.2	Multiplicative ARIMA Models	259
10.2	Box–Cox Transformation for Time Series	262
10.3	Multivariate Time Series	264
10.3.1	The cross-correlation function	264
10.3.2	Multivariate White Noise	265
10.3.3	Multivariate ARMA processes	266
10.3.4	Prediction Using Multivariate AR Models	268
10.4	Long-Memory Processes	270
10.4.1	The Need for Long-Memory Stationary Models	270

10.4.2	Fractional Differencing	270
10.4.3	FARIMA Processes	272
10.5	Bootstrapping Time Series	276
10.6	Bibliographic Notes	277
10.7	References	277
10.8	R Lab	277
10.8.1	Seasonal ARIMA Models	277
10.8.2	VAR Models	278
10.8.3	Long-Memory Processes	279
