

Contents

1	Introduction.....	1
1.1	Conventional (Analog) Holography	1
1.2	Digital Holography.....	5
	References.....	9
2	Diffraction and Fourier Optics	11
2.1	Fourier Transform and Mathematical Background.....	11
2.1.1	One-Dimensional Definition	11
2.1.2	Two-Dimensional Definition	12
2.1.3	Cartesian Geometry	14
2.1.4	Cylindrical Geometry	15
2.1.5	Basic Properties of Fourier Transforms	15
2.1.6	Convolution and Correlation.....	16
2.1.7	Some Useful Formulas.....	18
2.2	Scalar Diffraction Theory.....	19
2.3	Diffraction from a 2D Aperture	20
2.3.1	Paraxial (Fresnel) Approximation	21
2.3.2	Fraunhofer Diffraction	22
2.4	Propagation of Angular Spectrum	22
2.5	Propagation Through a Lens.....	25
2.5.1	Fourier Transform by a Lens	27
2.5.2	Imaging by a Lens	27
2.5.3	Lens of Finite Aperture	28
	References.....	28
3	Principles of Holography	29
3.1	Introduction	29
3.2	Basic Concept.....	29
3.2.1	Holographic Terms.....	31
3.3	Holography of Plane Waves	32
3.4	Holography of Point Sources	34

3.4.1	Magnifications	36
3.4.2	Collimated References	36
3.5	Holographic Processes	37
3.5.1	Amplitude and Phase Holograms	37
3.5.2	Transmission and Reflection Holograms	38
3.5.3	Thin and Thick Holograms	38
3.5.4	Hologram Materials	39
3.5.5	Phase Conjugation by Photorefractive Crystals	40
3.5.6	Four-Wave Mixing	40
3.5.7	Spectral Hole Burning	40
3.5.8	Stimulated Photon Echo	41
	References	42
4	Basic Methods of Numerical Diffraction	43
4.1	Discrete Fourier Transform	43
4.1.1	Programming Implementation of Fourier Transform	46
4.2	Fresnel Transform Method	47
4.3	Huygens Convolution Method	49
4.4	Angular Spectrum Method	50
4.5	Comparison of Methods	51
	References	53
5	Digital Holography Configurations	55
5.1	General Behavior of Digital Holographic Images	55
5.2	Digital Gabor Holography	60
5.3	Digital In-line Holography	61
5.4	Digital Image Plane Holography	63
5.5	Digital Fourier Holography	64
5.6	Digital Fresnel Holography	66
	References	68
6	Theoretical Studies of Digital Holography	71
6.1	Digital Sampling of Hologram	71
6.2	Wigner Distribution Function	74
6.2.1	Basic Properties of WDF	74
6.2.2	Fourier Transform by a Lens	75
6.2.3	Fourier Holography	76
6.2.4	Fresnel Holography	77
6.2.5	Space-Bandwidth Product	77
6.3	Fractional-Order Fourier Transform	78
6.4	Wavelets	80
	References	82
7	Suppression of DC and Twin-Image Terms	85
7.1	Suppression of DC Terms	85
7.2	Phase-Shifting Methods	88

7.3	Speckle Methods	90
7.4	Filtering of Angular Spectrum	91
	References	93
8	Phase-Shifting Digital Holography	95
8.1	Basic Principles of PSDH	95
8.2	Reduced Number of Steps	97
8.2.1	Three-Step Method	97
8.2.2	Two-Step Methods	98
8.3	Unknown Phase Steps	99
8.4	Techniques of PSDH	101
8.4.1	Phase-Shifting Methods	101
8.4.2	Heterodyne Digital Holography	101
8.4.3	Asynchronous Digital Holography	103
8.4.4	Parallel Phase-Shifting	103
8.4.5	Fractional Talbot Effect	103
8.4.6	Spatial Phase-Shifting	104
8.5	Errors and Noise in PSDH	105
	References	105
9	Numerical Techniques of Digital Holography	109
9.1	Numerical Focusing	109
9.1.1	Extended Focus	111
9.2	Pixel Resolution Control	112
9.2.1	Zero-Padding Method	112
9.2.2	Two-Step Propagation Method	113
9.3	Optical Phase Unwrapping	114
9.4	Diffraction Between Tilted Planes	119
9.5	Aberration Compensation	122
	References	123
10	Special Techniques of Digital Holography	129
10.1	Synthetic Aperture Methods	129
10.2	Multiplane Phase Retrieval	131
10.2.1	Noniterative Methods	131
10.2.2	Iterative Methods	134
10.2.3	Other Methods of Phase Retrieval	135
10.3	Dynamic Systems	135
10.4	Noise Reduction	137
10.5	Nonlinear Optics	137
10.5.1	Imaging of NLO Materials	137
10.5.2	Digital Holography by NLO Light	138
10.6	Optical Parameters of Digital Holography	139
10.6.1	Color Digital Holography	139
10.6.2	Polarization Digital Holography	141
10.6.3	Other Wavelengths and Particles	141
	References	142

11	Digital Holographic Microscopy	149
11.1	Optical Microscope Basics	149
11.1.1	Optical Configuration.....	149
11.1.2	Magnification	151
11.1.3	Resolution.....	151
11.1.4	Objective Lenses.....	152
11.1.5	Eye	152
11.1.6	Camera.....	153
11.2	Optical Microscopy Techniques.....	153
11.2.1	Bright Field Microscopy.....	153
11.2.2	Dark-Field Microscopy	154
11.2.3	Zernike Phase-Contrast Microscopy	154
11.2.4	Differential Interference Contrast	155
11.2.5	Interference Microscopy.....	156
11.2.6	Polarization Microscopy.....	157
11.2.7	Fluorescence Microscopy.....	157
11.2.8	Confocal Laser Scanning Microscopy	158
11.2.9	Multiphoton Excitation and Nonlinear Optical Microscopy	159
11.3	Digital Holographic Microscopy	159
11.3.1	Light Source	160
11.3.2	Interferometers.....	160
11.3.3	Camera.....	163
11.3.4	Computer	163
11.3.5	Examples.....	165
11.3.6	Comparisons of Analog and Digital Holographic Microscopy	166
11.4	Quantitative Phase Microscopy by DHM	168
11.5	Cell Microscopy and Other Applications	169
11.6	Special Techniques of DHM	174
11.6.1	Total Internal Reflection Digital Holographic Microscopy	174
11.6.2	Multimode Microscopy from a Single Hologram.....	177
11.6.3	Dark-Field DHM.....	179
11.6.4	DH Interferometer with a Beam-Splitter Cube.....	179
11.6.5	Lens-Free On-Chip Holographic Microscopy.....	180
11.7	Other Methods of Quantitative Phase Microscopy.....	181
11.7.1	Fourier Phase Microscopy.....	181
11.7.2	Hilbert Phase Microscopy	181
11.7.3	Diffraction Phase Microscopy.....	182
11.7.4	Quantitative DIC.....	183
11.7.5	Spiral Phase-Contrast Microscopy	184
11.7.6	Low-Coherence Interference Microscopy.....	185
	References.....	187

12 Low-Coherence and Tomographic Techniques	191
12.1 Techniques of Low-Coherence Digital Holographic Microscopy	191
12.1.1 Low-Coherence Sources.....	192
12.1.2 Rotating Ground Glass	193
12.1.3 Fresnel Incoherent Correlation Holography.....	195
12.1.4 Achromatic Fringe System	197
12.1.5 Triangular Interferometer.....	198
12.1.6 Conoscopic Holography	199
12.2 Optical Scanning Holography	200
12.2.1 Basic Principles of OSH.....	200
12.2.2 Imaging Characteristics of OSH.....	201
12.2.3 Related Techniques and Applications	203
12.3 Optical Coherence Tomography.....	204
12.3.1 Time-Domain OCT	204
12.3.2 Fourier-Domain OCT	205
12.3.3 Doppler OCT	206
12.3.4 Optical Coherence Microscopy.....	206
12.3.5 Phase-Sensitive OCT	208
12.3.6 Differential Phase-Contrast OCT.....	208
12.3.7 Phase-Dispersion Microscopy	208
12.3.8 Phase-Referenced Interferometry.....	209
12.4 Full-Field Optical Coherence Tomography	209
12.4.1 Principles of FFOCT	209
12.4.2 Techniques and Applications of FFOCT.....	212
12.4.3 Light-in-Flight Digital Holography	215
12.5 Digital Interference Holography.....	215
12.5.1 Principles of DIH	215
12.5.2 Related Techniques and Applications of DIH	220
12.6 Tomography	221
12.6.1 Optical Projection Tomography	221
12.6.2 Optical Diffraction Tomography	222
12.6.3 Holographic Optical Coherence Imaging	223
12.6.4 Turbid Imaging	223
References.....	225
