

Contents

1	Introduction	1
	References and Suggested Readings	7
	Ambient Noise Reviews and Proceedings	8
2	The Air–Sea Boundary Interaction Zone	11
	The Marine Boundary Layer	12
	The Viscous Sublayer	14
	Mechanical Turbulence	14
	The Effect of Buoyancy	16
	The Influence of Heat Transport	17
	The Monin–Obukhov Length	17
	The Combined Influence of Mass, Momentum, and Heat Transport	18
	The Roughness Scale and Motion of the Surface	20
	A Summary of the Wind Stress Coefficient and Critical	
	Friction Velocity	21
	Friction Velocity and Breaking Waves	22
	The Whitecap Index	27
	References and Suggested Readings	29
3	Fundamental Mechanisms	31
	The Inhomogeneous Wave Equation and Sources of Sound	31
	The Point Source Solution, Green’s Function	33
	Solutions to the Inhomogeneous Equation	34
	The Sea Surface	37
	The Source Integrals	38
	References and Suggested Readings	42
4	The Measurement of Oceanic Ambient Noise	45
	Introduction	45
	Noise Measurement	46
	The Autocorrelation Function, $\Gamma_p(\tau)$	48
	The Power Spectral Density	48
	Some Simple Statistical Concepts	50
	Phenomenological Observations	52

Infrasonic Noise	54
The Sonic Region	56
The Wind Speed Dependency at Frequencies Less Than 500 Hz	62
Mid- to High-Frequency Wind Speed Dependence	66
Low-Frequency Noise Characteristics	68
Directionality	69
Low-Frequency Directional Noise Characteristics	69
Beam Noise Levels and Horizontal Directionality	70
Vertical Noise Directionality	74
Rain Noise	78
Arctic Ambient Noise	85
Arctic Ambient Noise over the 10 Hz to 1 kHz Band	85
Low-Frequency Arctic Ambient Noise	89
References and Suggested Readings	93
5 Numerical Modeling of Ambient Noise	99
Introduction	99
Ambient Noise Modeling	100
The Noise Field	102
Plane Wave Response	104
Ambient Noise Computation	107
Parabolic Equation Field Computations	109
Field Interpolation	111
Noise Realizations	112
Environmental Considerations	113
Noise Source Levels	113
Wind Source Levels	114
Shipping Source Levels	115
Ambient Noise Examples	116
Uniform Noise	118
Wind Noise	120
Shipping Noise	122
Summary of Examples	124
Summary	124
References and Suggested Readings	126
6 Research Issues and Applications of Oceanic Noise	129
Summary	129
Noise Mechanisms	131
Hydromechanical Sources of Sound	132
Geoacoustic Uncertainty	133
Correlation Issues	135
Computational Issues	136
References and Suggested Readings	136

Appendix A Solutions to the Inhomogeneous Wave Equation	141
Derivation of the Inhomogeneous Wave Equation	141
The Retarded Green's Function Solution	144
References and Suggested Readings	147
Solution to the Inhomogeneous Wave Equation	148
References and Suggested Readings	149
The Inhomogeneous Wave Equation with a Surface Boundary	
Condition: Derivation of the Source Integrals	151
The General Solution	151
The Initial Conditions and Surface Boundary Conditions	151
The Surface Integrals	152
The Volume Integral Over the Source Region	153
The Source Integrals	155
References and Suggested Readings	157
Appendix B Standard Definitions	159
Harmonic Sound	160
Transient Sounds	161
Energy Flux Source Level	162
Spectral Density of a Transient	162
The Impulse	163
Steady Sounds	163
The Autocorrelation Function	164
The Power Spectral Density	164
Summary	166
A Brief Note on Parseval's Theorem	166
An Engineer's Proof of the Energy Theorem	168
Selected References	170
Applicable Standards	170
Appendix C A Review of the Sonic Properties of Bubbly Liquids	171
The Mallock–Wood Approach	171
An Extension to Include Bubble Dynamics	175
References and Suggested Readings	181
Appendix D Radiation and Scattering from Compact	
Bubble Clouds	185
References and Suggested Readings	191
Appendix E The Radiation from a Pulsating Sphere	193
The Monopole	195
The Finite-Size Sphere	196
The Bubble as a Monopole Source of Sound	197
The Transient Response of a Bubble	199
References and Suggested Readings	202

Appendix F Thermal Noise	203
The Modal Density	203
The Modal Energy Density	205
References and Suggested Readings	208
Appendix G The Lloyd Mirror	209
References and Suggested Readings	216
Appendix H Sounds from Drop Impacts	217
References and Suggested Readings	219
Appendix I Source Levels for Wind-Driven Noise	221
References and Suggested Readings	227
Appendix J Modal Noise Cross-Correlation Matrix	229
References and Suggested Readings	232
Nomenclature	233
Roman Letters	233
Greek Letters	236
Mathematical Operators	237
Abbreviations	237
Bibliography	241
Index	257
