

Contents

Chapter 1

Geometrical Background	1
1.1 Smooth Manifolds and Maps	1
1.2 Matrix Lie Groups	11
1.3 Principal Bundles	23
1.4 Connections and Curvature	29
1.5 Associated Bundles and Matter Fields	38

Chapter 2

Physical Motivation	45
2.1 General Framework for Classical Gauge Theories	45
2.2 Electromagnetic Fields	48
2.3 Spin Zero Electrodynamics	60
2.4 Spin One-Half Electrodynamics	71
2.5 $SU(2)$ -Yang-Mills-Higgs Theory on $\mathbb{R}^n$	104
2.6 Epilogue	137

Chapter 3

Frame Bundles and Spacetimes	139
3.1 Partitions of Unity, Riemannian Metrics and Connections	139
3.2 Continuous Versus Smooth	145
3.3 Frame Bundles	148
3.4 Minkowski Spacetime	162
3.5 Spacetime Manifolds and Spinor Structures	168

Chapter 4

Differential Forms and Integration	179
Introduction	179
4.1 Multilinear Algebra	179
4.2 Vector-Valued Forms	198
4.3 Differential Forms	205
4.4 The de Rham Complex	212
4.5 Tensorial Forms	222
4.6 Integration on Manifolds	232
4.7 Stokes' Theorem	249

Chapter 5

de Rham Cohomology	257
Introduction	257
5.1 The de Rham Cohomology Groups	258
5.2 Induced Homomorphisms	262
5.3 Cochain Complexes and Their Cohomology	275
5.4 The Mayer-Vietoris Sequence	281

5.5	The Cohomology of Compact, Orientable Manifolds	290
5.6	The Brouwer Degree	294
5.7	The Hopf Invariant	299
Chapter 6		
	Characteristic Classes	303
6.1	Motivation	303
6.2	Algebraic Preliminaries	306
6.3	The Chern-Weil Homomorphism	317
6.4	Chern Numbers	327
6.5	$\mathbb{Z}_2$ -Čech Cohomology for Smooth Manifolds	335
Appendix		
	Seiberg-Witten Gauge Theory	351
A.1	Donaldson Invariants and TQFT	351
A.2	Clifford Algebra and Spin^c -Structures	363
A.3	Seiberg-Witten Equations	379
A.4	The Moduli Space and Invariant	385
A.5	The Witten Conjecture	398
