

Contents

1	Introduction and Preliminaries	1
1.1	The Engineering Utility of Differential Equations	1
1.2	Sets, Relations, and Functions	2
1.2.1	Sets	2
1.2.2	Relations and Functions	4
1.2.3	The Derivative	5
1.2.4	Implicit Functions	6
1.3	Types of Differential Equations	8
1.3.1	Ordinary Versus Partial Differential Equations	9
1.3.2	The Order of a Differential Equation	10
1.3.3	Linear Versus Nonlinear Differential Equations	11
1.3.4	Homogeneous Versus Inhomogeneous Linear Differential Equations	12
1.3.5	Constant-Coefficient Versus Variable-Coefficient Linear Dif- ferential Equations	13
1.3.6	Types of Linear Second-Order Partial Differential Equations	14
1.4	Solutions of Differential Equations	14
1.4.1	Types of Solutions to Differential Equations	15
1.4.2	Existence and Uniqueness of Solutions	18
1.5	A Few Fundamental Principles from Science	19
1.5.1	Units	19
1.5.2	Mechanical Systems	21
1.5.3	Mechanical Components	32
1.5.4	Kirchhoff's Laws	34
1.5.5	Electronic Components	35
1.6	Introduction to Numerical Methods	39
1.6.1	Euler's Method	39
1.6.2	Determining an Appropriate Step Size	43
1.6.3	Numerical Methods for Higher-Order Differential Equations	44
1.6.4	Numerical Packages	45
1.7	Exercises	48
2	First-Order Ordinary Differential Equations	57
2.1	Motivational Examples	57

2.2	Homogeneous Constant-Coefficient Linear First-Order Ordinary Differential Equations	61
2.3	Inhomogeneous Constant-Coefficient Linear First-Order Ordinary Differential Equations	63
2.3.1	Undetermined Coefficients	63
2.3.2	Complication: When the Assumed Solution Contains a Homogeneous Solution	69
2.3.3	Variation of Parameters	74
2.4	Variable-Coefficient Linear First-Order Ordinary Differential Equations: Variation of Parameters	75
2.5	Ordinary First-Order Nonlinear Differential Equations	77
2.5.1	Separable Equations	77
2.5.2	Exact Equations	79
2.5.3	Integrating Factors	81
2.6	Summary	83
2.7	Exercises	83
3	Second-Order Linear Constant-Coefficient Ordinary Differential Equations	91
3.1	Introduction	91
3.2	Theory of Linear Homogeneous Equations	93
3.2.1	The Principle of Superposition	95
3.2.2	Linear Independence	96
3.3	Constant-Coefficient Homogeneous Equations	98
3.3.1	Distinct Real Roots	101
3.3.2	Complex Roots	102
3.3.3	Repeated Roots	104
3.4	Inhomogeneous Equations	106
3.4.1	The Method of Undetermined Coefficients Constant-Coefficient Differential Equations	106
3.4.2	Method of Variation of Parameters for Constant or Variable-Coefficient Equations	109
3.5	Summary	113
3.6	Exercises	114
4	Single Degree of Freedom Vibrations	123
4.1	Free Undamped Oscillations	124
4.2	Harmonically Forced Undamped Vibrations	126
4.2.1	Resonance	132
4.2.2	Near Resonance	134
4.2.3	Vibrating Base	136
4.3	Free Damped Vibrations	137
4.3.1	Damping Ratio Greater than One	137
4.3.2	Damping Ratio Equal to One	139
4.3.3	Damping Ratio Less than One	139

4.4	Harmonically Forced Damped Vibrations	139
4.4.1	Resonance	143
4.4.2	Vibrating Base	143
4.5	System Identification	147
4.6	Exercises	151
5	Variable-Coefficient Linear Ordinary Differential Equations	161
5.1	Motivational Examples	162
5.2	Convergence: Real Rational Functions	166
5.3	Series Solutions About an Ordinary Point	171
5.4	Series Solutions About a Singular Point	174
5.5	A Collection of Famous Series Solutions	182
5.5.1	Airy Equation	182
5.5.2	Chebychev Equation	183
5.5.3	Hermite Equation	185
5.5.4	Legendre Equation	186
5.5.5	Bessel Equation	186
5.6	Exercises	188
6	Systems of First-Order Linear Constant-Coefficient Ordinary Differential Equations	193
6.1	Introduction	193
6.2	Converting to Systems of First-Order Differential Equations	197
6.3	Linearly Independent Full Set of Real Eigenvectors	197
6.3.1	Some Useful Results from Linear Algebra	198
6.3.2	Solution Technique for $\dot{\xi} = A\xi$	200
6.4	Complex Eigenvectors	204
6.5	Generalized Eigenvectors	211
6.5.1	Geometric and Algebraic Multiplicities	212
6.5.2	Homogeneous Solutions with Repeated Eigenvalues	216
6.6	Diagonalization	226
6.7	The Matrix Exponential	230
6.8	Nonhomogeneous Systems of First-Order Equations	233
6.8.1	Diagonalization	234
6.8.2	Undetermined Coefficients	237
6.8.3	Variation of Parameters	240
6.9	Exercises	244
7	Applications of Systems of First-Order Equations	249
7.1	Multidegree of Freedom Vibrations	249
7.1.1	Classical Approach	250
7.1.2	Eigenvalue and Eigenvector Approach	254
7.1.3	Forced Undamped Multidegree of Freedom Systems	257
7.1.4	Vibration Absorbers	259
7.2	Introduction to “Modern” Control	262

7.2.1	State-Space Control Systems	263
7.2.2	Pole Placement	265
7.2.3	The Linear Quadratic Regulator	267
7.3	Exercises	269
8	The Laplace Transform	279
8.1	Motivational Example	279
8.2	Fourier Transforms	281
8.3	Laplace Transforms	282
8.3.1	The Laplace Transform of Some Common Functions	284
8.3.2	Properties of the Laplace Transform	288
8.4	Initial Value Problems and Discontinuous Forcing	292
8.5	Transfer Functions	304
8.6	Block Diagram Representation and Algebra	312
8.7	Computational Tools	320
8.8	Exercises	322
9	Classical Control Theory: Analysis	329
9.1	PID Control	330
9.1.1	Proportional Control	331
9.1.2	Proportional plus Derivative Control	334
9.1.3	Proportional plus Integral plus Derivative Control	337
9.2	Time Domain Specifications	339
9.3	Response Versus Pole Location	341
9.3.1	Real Poles	342
9.3.2	Poles at the Origin	343
9.3.3	Purely Imaginary Poles	346
9.3.4	Complex Conjugate Poles	346
9.4	Stability	351
9.5	Response of a Second-Order System	355
9.5.1	Second-Order System Step Response	357
9.5.2	Additional Poles and Zeros	364
9.6	Root Locus Analysis	373
9.6.1	Motivational Example	373
9.6.2	A Quick Review of Functions of a Complex Variable	378
9.6.3	Root Locus Plotting Rules	381
9.6.4	Examples	393
9.6.5	Determining the Gain	399
9.6.6	Computational Tools	400
9.7	Frequency Response Analysis	401
9.7.1	Bode Plots	404
9.7.2	Nyquist Plots	421
9.8	Exercises	435
10	Classical Control Theory: Design	449

10.1	System Type and Steady-State Error	450
10.2	Controller Design Using a Root Locus Plot	452
10.2.1	Proportional Control	452
10.2.2	Lead–Lag Compensation	460
10.3	Frequency Response Design	468
10.3.1	Lead Compensation	470
10.3.2	Lag Compensation	477
10.4	Filters	477
10.4.1	Lowpass Filters	477
10.4.2	Highpass Filters	479
10.5	Exercises	480
11	Partial Differential Equations	485
11.1	The One-Dimensional Wave Equation	485
11.1.1	Derivation of the Wave Equation	485
11.1.2	Boundary Conditions	487
11.1.3	Separation of Variables	488
11.1.4	Summary and Examples of the Solution to the Wave Equation	494
11.2	Fourier Series	497
11.2.1	Periodic Functions	498
11.2.2	Inner Products	499
11.2.3	Orthogonality	502
11.2.4	The General Fourier Series	504
11.2.5	Examples of Fourier Series	505
11.2.6	Summary Remarks and Theory	511
11.3	The One-Dimensional Heat Equation	511
11.3.1	Solution to the Heat Conduction Equation with Homogeneous Boundary Conditions	514
11.3.2	Solution to the Heat Equation with Inhomogeneous Boundary Conditions	518
11.3.3	Solution to the Heat Equation with an Insulated End	520
11.4	Heat Conduction in Two Dimensions	522
11.4.1	Laplace’s Equation: Steady-State Temperature Distribution	522
11.4.2	Unsteady Two-Dimensional Heat Conduction with Homogeneous Boundary Conditions	525
11.4.3	Unsteady Two-Dimensional Heat Conduction with Inhomogeneous Boundary Conditions	530
11.5	Vibrating Membranes	534
11.5.1	The Two-Dimensional Wave Equation in Rectangular Coordinates	534
11.5.2	The Two-Dimensional Wave Equation in Polar Coordinates	535
11.5.3	Summary of the Solution to the Wave Equation in Polar Coordinates	542
11.5.4	Modes of Vibration of a Circular Drum Head	543
11.6	Sturm–Liouville Theory	544

11.7	The Euler–Bernoulli Beam Equation	547
11.7.1	Derivation of the Beam Equation	547
11.7.2	Boundary Conditions for the Beam Equation	552
11.7.3	Solutions to the Beam Equation	554
11.8	A Musical Interlude	559
11.8.1	Defining Scales	561
11.8.2	A Simple Model for Dissonance	564
11.8.3	Percussion Instruments	567
11.9	Additional Topics	568
11.10	Exercises	569
12	Numerical Methods	577
12.1	Another Look at Euler’s Method	577
12.2	Taylor Series Methods	580
12.2.1	Second-Order Taylor Series Expansion	582
12.2.2	Third-Order Taylor Series Expansion	584
12.3	The Runge–Kutta Method	587
12.3.1	The First-Order Runge–Kutta Method	589
12.3.2	The Second-Order Runge–Kutta Method	590
12.3.3	The Third-Order Runge–Kutta Method	594
12.3.4	The Fourth-Order Runge–Kutta Method	596
12.4	Error Analysis	597
12.5	Numerical Methods for Higher-Order Systems	604
12.5.1	Systems of First-Order Ordinary Differential Equations	604
12.5.2	Higher-Order Ordinary Differential Equations	604
12.5.3	Euler’s Method	605
12.5.4	Second-Order Taylor Series	608
12.5.5	Fourth-Order Runge–Kutta	608
12.6	Numerical Methods for Partial Differential Equations	611
12.6.1	Finite Difference Approximation	612
12.6.2	Finite Differences: Laplace’s Equation	614
12.6.3	Finite Differences: Heat Equation	617
12.6.4	Finite Differences: The Wave Equation	622
12.7	Exercises	624
13	Introduction to Nonlinear Systems	631
13.1	Motivation and Introduction	631
13.1.1	Multiple Equilibria and Chaos	631
13.1.2	The Phase Plane	633
13.1.3	Poincaré Sections	635
13.1.4	Limit Cycles	635
13.2	Linearization	637
13.3	Jacobian Linearization	643
13.4	Geometry and Stability of Equilibrium Points in the Phase Plane	648
13.5	Harmonic Balance and Describing Functions	655

13.5.1	Harmonic Balance	655
13.5.2	Describing Functions	658
13.6	Introduction to Local Bifurcation Analysis	666
13.6.1	Saddle-Node Bifurcations	667
13.6.2	Pitchfork Bifurcations	672
13.6.3	Concluding Comments	675
13.7	Exercises	675
A	Some Complex Variable Theory	683
A.1	Complex Numbers	683
A.2	Functions of a Complex Variable	685
A.3	Partial Fraction Decomposition	686
B	Linear Algebra Review	691
B.1	Linear Vector Spaces	691
B.1.1	Properties of Vector Operations in the Euclidean Plane . . .	691
B.1.2	Definition and Examples of Vector Spaces	694
B.1.3	Linear Independence	699
B.1.4	Eigenvalues and Eigenvectors	700
B.2	Matrix Computations	704
B.2.1	Computing Determinants	704
B.2.2	Computing a Matrix Inverse	706
C	Detailed Computations	707
C.1	Computations Related to Fourier Series	707
D	Some Theorems	709
D.1	Existence and Uniqueness Theorems	709
D.2	Series Solutions About a Singular Point	710
E	Example Programs	713
E.1	C Programs	713
E.2	FORTRAN Programs	725
	References	739
