<b>1</b>	<b>Fuels</b>	<b>1</b>
1.1	Types of Fuel	1
1.2	Fuel Usage	5
1.3	Basic Considerations of the Choice of Fuels	6
1.4	Classification of Fuels by Phase at Ambient Conditions	8
1.5	Identification of Fuel by Molecular Structure: International Union of Pure and Applied Chemistry (IUPAC)	9
1.6	Some Related Properties of Liquid Fuels	12
	Exercises	13
	References	13
<b>2</b>	<b>Thermodynamics of Combustion</b>	<b>15</b>
2.1	Properties of Mixtures	15
2.2	Combustion Stoichiometry	17
2.2.1	Methods of Quantifying Fuel and Air Content of Combustible Mixtures	19
2.3	Heating Values	23
2.3.1	Determination of HHV for Combustion Processes at Constant Pressure	24
2.3.2	Determination of HHV for Combustion Processes from a Constant-Volume Reactor	27
2.3.3	Representative HHV Values	29
2.4	Adiabatic Flame Temperature	31
2.4.1	Constant-Pressure Combustion Processes	31
2.4.2	Comparison of Adiabatic Flame Temperature Calculation Methods	36
2.5	Chapter Summary	40
	Exercises	44

<b>3</b>	<b>Chemical Kinetics.....</b>	<b>49</b>
3.1	The Nature of Combustion Chemistry.....	50
3.1.1	Elementary Reactions: Chain Initiation .....	51
3.1.2	Elementary Reactions: Chain Branching .....	51
3.1.3	Elementary Reactions: Chain Terminating or Recombination .....	52
3.1.4	Elementary Reactions: Chain Propagating .....	52
3.2	Elementary Reaction Rate .....	52
3.2.1	Forward Reaction Rate and Rate Constants .....	52
3.2.2	Equilibrium Constants .....	54
3.3	Simplified Model of Combustion Chemistry .....	55
3.3.1	Global One-Step Reaction .....	55
3.3.2	Pressure Dependence of Rate of Progress .....	61
3.3.3	Heat Release Rate (HRR).....	61
3.3.4	Modeling of Chemical Kinetics with Detailed Description.....	61
3.3.5	Partial Equilibrium.....	65
3.3.6	Quasi-Steady State .....	65
	Exercises .....	69
	References.....	73
<b>4</b>	<b>Review of Transport Equations and Properties.....</b>	<b>75</b>
4.1	Overview of Heat and Mass Transfer .....	75
4.2	Conservation of Mass and Species .....	78
4.3	Conservation of Momentum .....	80
4.4	Conservation of Energy.....	80
4.4.1	Terms in the Conservation of Energy Equation.....	80
4.4.2	Derivation of a 1-D Conservation of Energy Equation .....	82
4.5	Normalization of the Conservation Equations.....	84
4.6	Viscosity, Conductivity and Diffusivity .....	87
	References.....	88
<b>5</b>	<b>Ignition Phenomena .....</b>	<b>89</b>
5.1	Autoignition (Self-ignition, Spontaneous Ignition) Based on Thermal Theory.....	89
5.2	Effect of Pressure on the Autoignition Temperature .....	93
5.3	Piloted Ignition.....	95
5.4	Condensed Fuel Ignition .....	98
5.4.1	Fuel Vaporization .....	98
5.4.2	Important Physiochemical Properties.....	99
5.4.3	Characteristic Times in Condensed Fuel Ignition .....	100
5.4.4	Critical Heat Flux for Ignition .....	106
	Exercises .....	108
	References.....	109

<b>6 Premixed Flames</b>	111
6.1 Physical Processes in a Premixed Flame	111
6.1.1 Derivation of Flame Speed and Thickness	113
6.1.2 Measurements of the Flame Speed	117
6.1.3 Structure of Premixed Flames	119
6.1.4 Dependence of Flame Speed on Equivalence Ratio, Temperature and Pressure	121
6.1.5 Dependence of Flame Thickness on Equivalence Ratio, Temperature and Pressure	125
6.2 Flammability Limits	125
6.2.1 Effects of Temperature and Pressure on Flammability Limits	127
6.3 Flame Quenching	127
6.4 Minimum Energy for Sustained Ignition and Flame Propagation	130
6.5 Turbulent Premixed Flames	133
6.5.1 Eddy Diffusivity	133
6.5.2 Turbulent Flame Speed	134
6.6 Summary	135
Exercises	136
References	137
<b>7 Non-premixed Flames (Diffusion Flames)</b>	139
7.1 Description of a Candle Flame	139
7.2 Structure of Non-premixed Laminar Free Jet Flames	140
7.3 Laminar Jet Flame Height ( $L_f$ )	142
7.4 Empirical Correlations for Laminar Flame Height	145
7.5 Burke-Schumann Jet Diffusion Flame	147
7.6 Turbulent Jet Flames	149
7.6.1 Lift-Off Height ( $h$ ) and Blowout Limit	151
7.7 Condensed Fuel Fires	152
Exercises	153
References	154
<b>8 Droplet Evaporation and Combustion</b>	155
8.1 Droplet Vaporization in Quiescent Air	155
8.1.1 Droplet Vaporization in Convective Flow	159
8.2 Droplet Combustion	162
8.3 Initial Heating of a Droplet	164
8.3.1 Effect of Air Temperature and Pressure	166
8.4 Droplet Distribution	171
Exercises	174
Reference	175

<b>9 Emissions</b>	177
9.1 Negative Effects of Combustion Products	177
9.2 Pollution Formation	178
9.2.1 Parameters Controlling Formation of Pollutants	179
9.2.2 CO Oxidation	182
9.2.3 Mechanisms for NO Formation	183
9.2.4 Controlling NO Formation	189
9.2.5 Soot Formation	190
9.2.6 Relation Between $\text{NO}_x$ and Soot Formation	191
9.2.7 Oxides of Sulfur ( $\text{SO}_x$ )	191
9.3 Quantification of Emissions	193
Exercises	196
References	198
<b>10 Premixed Piston IC Engines</b>	199
10.1 Principles of SI Engines	199
10.2 Thermodynamic Analysis	201
10.3 Relationship between Pressure Trace and Heat Release	206
10.4 Octane Number	207
10.4.1 Definition of Octane Rating	207
10.4.2 Measurement Methods	208
10.5 Fuel Preparation	210
10.6 Ignition Timing	213
10.7 Flame Propagation in SI Engines	214
10.8 Modeling of Combustion Processes in IC Engines	215
10.8.1 A Simplified Two-Zone Model of Engine Combustion	216
10.9 Emissions and Their Control	219
10.9.1 Three-Way Catalyst	220
10.10 Gasoline Direct Injection (GDI) Engines	221
Exercises	224
References	226
<b>11 Diesel Engines</b>	227
11.1 Overall Comparisons to SI Engines	227
11.1.1 Advantages of Diesel Engines as Compared to SI Engines	228
11.1.2 Disadvantages of Diesel Engines as Compared to SI Engines	228
11.2 Thermodynamics of Diesel Engines	229
11.3 Diesel Spray and Combustion	230
11.4 Cetane Number	235

11.5	Diesel Emissions.....	237
11.6	Homogeneous Charge Compression Ignition (HCCI) .....	238
11.6.1	HCCI Overview.....	238
11.6.2	HCCI Emissions .....	238
11.6.3	Challenges with HCCI.....	240
	References.....	241
<b>Appendices</b> .....		<b>243</b>
<b>Index</b> .....		<b>299</b>
