1	Introduction to Benchmarking	1
1.1	Why benchmark	1
1.1.1	Learning	2
1.1.2	Coordination	3
1.1.3	Motivation	5
1.2	Ideal evaluations	6
1.3	Key Performance Indicators and Ratios	8
1.4	Technology and efficiency	11
1.5	Many inputs and outputs	13
1.6	From effectiveness to efficiency	15
1.7	Frontier models	17
1.7.1	A simple taxonomy	17
1.7.2	Pros and cons	18
1.8	Software	20
1.9	Summary	20
1.10	Bibliographic notes	21
2	Efficiency Measures	23
2.1	Introduction	23
2.2	Setting	23
2.3	Efficient production	24
2.4	Farrell efficiency	26
2.4.1	Non-discretionary inputs and outputs	29
2.4.2	Using Farrell to rank firms	29
2.4.3	Farrell and Shephard distance functions	30
2.5	Directional efficiency measures	31
2.6	Efficiency measures with prices	35
2.6.1	Cost and input allocative efficiency	36
2.6.2	Revenue and output allocative efficiency	39
2.6.3	Profit efficiency	41
2.7	Dynamic efficiency	41

2.8	Structural and network efficiency	45
2.9	Choice between efficiency measures	48
2.10	Summary	50
2.11	Bibliographic notes	50
2.12	Appendix: More advanced material on efficiency measures	51
2.12.1	The rationale of efficiency	52
2.12.2	Axiomatic characterization of efficiency measures	53
3	Production Models and Technology	57
3.1	Introduction	57
3.2	Setting	57
3.3	The technology set	59
3.4	Free disposability of input and output	60
3.5	Convexity	64
3.6	Free disposal and convex	68
3.7	Scaling and additivity	70
3.8	Alternative descriptions of the technology	74
3.9	Summary	77
3.10	Bibliographic notes	78
3.11	Appendix: Distance functions and duality	78
4	Data Envelopment Analysis DEA	81
4.1	Introduction	81
4.2	Setting	82
4.3	Minimal extrapolation	82
4.4	DEA technologies	85
4.5	DEA programs	90
4.6	Peer units	93
4.6.1	Numerical example in R	95
4.7	DEA as activity analysis	98
4.8	Scale and allocative efficiency	99
4.8.1	Scale efficiency in DEA	99
4.8.2	Allocative efficiency in DEA	102
4.9	Summary	104
4.10	Bibliographic notes	105
4.11	Appendix: More technical material on DEA models	106
4.11.1	Why the $T^*(\gamma)$ sets work	106
4.11.2	Linear programming	107
4.11.3	DEA “cost” and production functions	109
5	Additional Topics in DEA	115
5.1	Introduction	115
5.2	Super-efficiency	115
5.3	Non-discretionary variables	118
5.4	Directional efficiency measures	121

5.5	Improving both inputs and outputs	124
5.6	Slack considerations	127
5.7	Measurement units, values and missing prices	131
5.8	Dual programs	132
5.9	Maximin formulations	137
5.10	Partial value information	138
5.10.1	Establishing relevant value restrictions	142
5.10.2	Applications of value restrictions	143
5.11	Summary	145
5.12	Bibliographic notes	146
5.13	Appendix: Outliers	147
5.13.1	Types of outliers	147
5.13.2	Identifying outliers	148
5.13.3	Data cloud method	149
5.13.4	Finding outliers in R	151
6	Statistical Analysis in DEA	155
6.1	Introduction	155
6.2	Asymptotic tests	156
6.2.1	Test for group differences	157
6.2.2	Test of model assumptions	160
6.3	The bootstrap method	165
6.3.1	Confidence interval	169
6.4	Bootstrapping in DEA	170
6.4.1	Naive bootstrap	171
6.4.2	Smoothing	172
6.4.3	Bias and bias correction	173
6.5	Algorithm to bootstrap DEA	173
6.5.1	Confidence intervals	176
6.6	Numerical example in R	176
6.7	Interpretation of the bootstrap results	179
6.7.1	One input, one output	180
6.7.2	Two inputs	181
6.8	Statistical tests using bootstrapping	183
6.9	Summary	185
6.10	Bibliographic notes	186
6.11	Appendix: Second stage analysis	187
6.11.1	Ordinary linear regressions OLS	188
6.11.2	Tobit regression	189
6.11.3	Numerical example in R	192
6.11.4	Problems with the two-step method	196

7	Stochastic Frontier Analysis SFA	197
7.1	Introduction	197
7.2	Parametric approaches	198
7.3	Ordinary regression models	200
7.4	Deterministic frontier models	201
7.5	Stochastic frontier models	204
7.5.1	Normal and half-normal distributions	206
7.6	Maximum likelihood estimation	207
7.6.1	Justification for the method	208
7.6.2	Numerical methods	209
7.7	The likelihood function	210
7.8	Actual estimation	212
7.9	Efficiency variance	214
7.9.1	Comparing OLS and SFA	216
7.10	Firm-specific efficiency	217
7.10.1	Firm-specific efficiency in the additive model	221
7.11	Comparing DEA, SFA, and COLS efficiencies	223
7.12	Summary	227
7.13	Bibliographic notes	229
7.14	Appendix: Derivation of the log likelihood function	230
8	Additional Topics in SFA	233
8.1	Introduction	233
8.2	Stochastic distance function models	233
8.2.1	Estimating an output distance function	238
8.3	Functional forms	239
8.3.1	Approximation of functions	239
8.3.2	Homogeneous functions	241
8.3.3	The translog distance function	243
8.4	Stochastic cost function	244
8.5	Statistical inference	248
8.5.1	Variance of parameters	249
8.5.2	Hypothesis testing using the <i>t</i> -test	250
8.5.3	General likelihood ratio tests	251
8.5.4	Is the variation in efficiency significant?	252
8.6	Test for constant returns to scale	253
8.6.1	Rewrite the model: <i>t</i> -test	254
8.6.2	Linear hypothesis	255
8.6.3	Likelihood ratio test	256
8.7	Other distributions of technical efficiency	257
8.8	Biased estimates	260
8.9	Summary	262
8.10	Bibliographic notes	262

9	Merger Analysis	263
9.1	Introduction	263
9.2	Horizontal mergers	264
9.2.1	Integration gains	265
9.2.2	Disintegration gains	268
9.3	Learning, harmony and size effects	269
9.3.1	Organizational restructuring	272
9.3.2	Rationale of the harmony measure	273
9.3.3	Decomposition with a cost function	274
9.4	Implementations in DEA and SFA	275
9.4.1	Numerical example in R	277
9.4.2	Mergers in a parametric model	280
9.4.3	Technical complication	281
9.4.4	Methodological complication	282
9.5	Practical application: Merger control in Dutch hospital industry	282
9.6	Practical application: Mergers of Norwegian DSOs	291
9.7	Controllability, transferability, and ex post efficiency	291
9.8	Summary	295
9.9	Bibliographic notes	296
10	Regulation and Contracting	299
10.1	Introduction	299
10.2	Classical regulatory packages	299
10.2.1	Cost-recovery regimes	300
10.2.2	Fixed price regimes (price-cap, revenue cap, CPI-X)	301
10.2.3	Yardstick regimes	303
10.2.4	Franchise auctions	305
10.2.5	Applications	305
10.3	Practical application: DSO regulation in Germany	306
10.3.1	Towards a modern benchmark based regulation	306
10.3.2	Revenue cap formula	307
10.3.3	Benchmarking requirements	308
10.3.4	Model development process	310
10.3.5	Model choice	311
10.3.6	Final model	313
10.4	DEA based incentive schemes	314
10.4.1	Interests and decisions	315
10.4.2	Super-efficiency in incentive schemes	316
10.4.3	Incentives with individual noise	317
10.4.4	Incentives with adverse selection	318
10.4.5	Dynamic incentives	320
10.4.6	Bidding incentives	320
10.4.7	Practical application: DSO regulation in Norway	321
10.5	Summary	323
10.6	Bibliographic notes	323

A	Getting Started with R: A Quick Introduction	325
A.1	Introduction	325
A.2	Getting and installing R	325
A.3	An introductory R session	326
A.3.1	Packages	331
A.3.2	Scripts	332
A.3.3	Files in R	332
A.4	Changing the appearance of graphs	333
A.5	Reading data into R	333
A.5.1	Reading data from Excel	334
A.6	Benchmarking methods	334
A.7	A first R script for benchmarking	334
A.8	Other packages for benchmarking in R	336
A.9	Bibliographic notes	338
