

# Table of Contents

<b>Preface</b>	<b>v</b>
<b>1 Conventional Kolsky bars</b>	<b>1</b>
1.1 Background	1
1.2 A Brief History of the Kolsky Bar	3
1.3 General Description of Kolsky Compression Bar	7
1.4 Design of Kolsky Compression Bar	17
1.5 Kolsky Bars of Large and Small Diameters	24
1.6 Calibration and Data Reduction of Kolsky Compression Bar Experiments	27
<b>2 Testing Conditions in Kolsky Bar Experiments</b>	<b>37</b>
2.1 One-dimensional Planar Elastic Wave Propagation	37
2.2 Interfacial Friction	45
2.3 Inertia Effects in Specimen	46
2.4 Constant Strain Rate Deformation	49
2.5 Pulse Shaping Technique	50
2.6 Single Loading and Unloading Control	62
2.7 Upper Limit of Strain Rate	69
<b>3 Kolsky Compression Bar Experiments on Brittle Materials</b>	<b>77</b>
3.1 Brittle Specimens in Kolsky Bar	77
3.2 Platens to Minimize Stress Concentration	82
3.3 Universal Joint	84
3.4 Pulse Shaping	87
3.5 Experiment Design for Brittle Materials	88
3.5.1 Macor and Limestone	88
3.5.2 Loading-Reloading on Ceramics	96
3.5.3 S-2 Glass/SC15 Composite	107
3.5.4 Glass Failure under Compression/Shear	113

<b>4</b>	<b>Kolsky Compression Bar Experiments on Soft Materials</b>	<b>119</b>
4.1	Challenges in Characterizing Soft Materials	119
4.2	Specimen Design	125
4.3	Pulse Shaping	131
4.4	Force Sensing	133
4.5	Experiment Design	140
4.5.1	Polymethyl Methacrylate (PMMA)	142
4.5.2	Rubbers	144
4.5.2.1	Soybean-Oil Based Polymers	145
4.5.2.2	ESO-Nanoclay Composites	150
4.5.2.3	EPDM Rubber	153
4.5.3	Foams	154
4.5.3.1	Brittle Foams	154
4.5.3.2	Elastic-Plastic Foam	158
4.5.4	Biological Tissues	166
4.5.4.1	Porcine Muscles	166
4.5.4.2	Brain Tissues	172
<b>5</b>	<b>Kolsky Compression Bar Experiments on Ductile Materials</b>	<b>177</b>
5.1	Issues in Kolsky-Bar Experiments on Ductile Materials	177
5.2	Pulse Shaping	180
5.3	Experiment Design for Ductile Materials	184
5.3.1	Metals	185
5.3.2	Shape Memory Alloy	197
5.3.3	Alumina Filled Epoxy	200
5.3.4	Lead-Free Solder	205
<b>6</b>	<b>Kolsky Compression Bar for Dynamic Triaxial Experiments</b>	<b>209</b>
6.1	Modified Kolsky Bar for Dynamic Triaxial Tests	209
6.2	Specimen Design and Installation	212
6.3	Local Pressure and Deformation Measurements	213
6.4	Pulse Shaping	217
6.5	Dynamic Multiaxial Response of Sand	219
6.6	Response of Indiana Limestone Under Pressure	223
6.7	Dynamic Confinement Experiments on Soft Materials	226

<b>7</b>	<b>Kolsky Compression Bar Experiments at High/Low Temperatures</b>	<b>233</b>
7.1	Heating/Cooling the Specimen	233
7.2	An Automated System for Precise Timing Control	237
7.3	High Temperature Experiments on a Stainless Steel	242
7.4	Temperature Effects on a Shape Memory Alloy	249
7.5	Temperature Effects on an Epoxy Syntactic Foam	251
7.6	Temperature Effects on PMDI Foams	257
<b>8</b>	<b>Kolsky Bar for Dynamic Tensile/Torsion Experiments</b>	<b>261</b>
8.1	Methods to Apply Dynamic Tension on Specimens	261
8.2	Tension Specimen Design	271
8.3	Pulse Shaping in Tension Experiments	275
8.4	Methods to Generate Dynamic Torque	275
8.5	Torsion Specimen Design	278
8.6	Combined Axial/Torsion Loading	279
8.7	Examples of Dynamic Tensile Experiments	280
8.7.1	Epoxy and PMMA	280
8.7.2	Bovine Tendon	284
8.7.3	Rubber	287
<b>9</b>	<b>Kolsky Compression Bar Experiments at Intermediate Strain Rates</b>	<b>291</b>
9.1	Lack of Data at Intermediate Strain Rates	291
9.2	Material Testing Methods at Intermediate Rates	292
9.3	Intermediate Strain-Rate Characterization of Polymeric Foams	303
<b>10</b>	<b>Kolsky Bar for Dynamic Structural Experiments</b>	<b>313</b>
10.1	Dynamic Fracture	313
10.2	Dynamic Equi-Biaxial Bending Experiments	329
10.3	Dynamic Response of Micro-Machined Structures	334
10.4	Low-Speed Penetration	344
	<b>Appendix A : Pulse Shaping FORTRAN Code</b>	<b>349</b>
	<b>References</b>	<b>375</b>

Split Hopkinson (Kolsky) Bar  
Design, Testing and Applications

Chen, W.W.; Song, B.

2011, IX, 388 p., Hardcover
