Table of Contents	vii
Preface	xiii
Foreword	xv
Acknowledgments	xvii

Part I. Fundamental of two-phase flow

1. Introduction	1
1.1. Relevance of the problem	1
1.2. Characteristic of multiphase flow	3
1.3. Classification of two-phase flow	5
1.4. Outline of the book	10
2. Local Instant Formulation	11
1.1. Single-phase flow conservation equations	13
1.1.1. General balance equations	13
1.1.2. Conservation equation	15
1.1.3. Entropy inequality and principle of constitutive law	18
1.1.4. Constitutive equations	20
1.2. Interfacial balance and boundary conditions	24
1.2.1. Interfacial balance (Jump condition)	24

1.2.2. Boundary conditions at interface	32
1.2.3. Simplified boundary condition	38
1.2.4. External boundary conditions and contact angle	43
1.3. Application of local instant formulation to two-phase flow problems	46
1.3.1. Drag force acting on a spherical particle in a very slow stream	46
1.3.2. Kelvin-Helmholtz instability	48
1.3.3. Rayleigh-Taylor instability	52
Part II. Two-phase field equations based on time average	
3. Various Methods of Averaging	55
1.1. Purpose of averaging	55
1.2. Classification of averaging	58
1.3. Various averaging in connection with two-phase flow analysis	61
4. Basic Relations in Time Average	67
1.1. Time domain and definition of functions	68
1.2. Local time fraction – Local void fraction	72
1.3. Time average and weighted mean values	73
1.4. Time average of derivatives	78
1.5. Concentrations and mixture properties	82
1.6. Velocity field	86
1.7. Fundamental identity	89
5. Time Averaged Balance Equation	93
1.1. General balance equation	93
1.2. Two-fluid model field equations	98
1.3. Diffusion (mixture) model field equations	103
1.4. Singular case of $v_{ni}=0$ (quasi-stationary interface)	108
1.5. Macroscopic jump conditions	110
1.6. Summary of macroscopic field equations and jump conditions	113
1.7. Alternative form of turbulent heat flux	114
6. Connection to Other Statistical Averages	119
1.1. Eulerian statistical average (ensemble average)	119
1.2. Boltzmann statistical average	120
Part III. Three-dimensional model based on time average	
7. Kinematics of Averaged Fields	129
1.1. Convective coordinates and convective derivatives	129

1.2. Streamline	132
1.3. Conservation of mass	133
1.4. Dilatation	140
8. Interfacial Transport	143
1.1. Interfacial mass transfer	143
1.2. Interfacial momentum transfer	145
1.3. Interfacial energy transfer	149
9. Two-fluid Model	155
1.1. Two-fluid model field equations	156
1.2. Two-fluid model constitutive laws	169
1.2.1. Entropy inequality	169
1.2.2. Equation of state	172
1.2.3. Determinism	177
1.2.4. Average molecular diffusion fluxes	179
1.2.5. Turbulent fluxes	181
1.2.6. Interfacial transfer constitutive laws	186
1.3. Two-fluid model formulation	198
1.4. Various special cases	205
10. Interfacial Area Transport	217
1.1. Three-dimensional interfacial area transport equation	218
1.1.1. Number transport equation	219
1.1.2. Volume transport equation	220
1.1.3. Interfacial area transport equation	222
1.2. One-group interfacial area transport equation	227
1.3. Two-group interfacial area transport equation	228
1.3.1. Two-group particle number transport equation	229
1.3.2. Two-group void fraction transport equation	230
1.3.3. Two-group interfacial area transport equation	234
1.3.4. Constitutive relations	240
11. Constitutive Modeling of Interfacial Area Transport	243
1.1. Modified two-fluid model for the two-group interfacial area transport equation	245
1.1.1. Conventional two-fluid model	245
1.1.2. Two-group void fraction and interfacial area transport equations	246
1.1.3. Modified two-fluid model	248
1.1.4. Modeling of two gas velocity fields	253
1.2. Modeling of source and sink terms in one-group interfacial area transport equation	257
1.2.1. Source and sink terms modeled by Wu et al. (1998)	259
1.2.2. Source and sink terms modeled by Hibiki and Ishii (2000a)	267

1.2.3. Source and sink terms modeled by Hibiki et al. (2001b)	275
1.3. Modeling of source and sink terms in two-group interfacial area transport equation	276
1.3.1. Source and sink terms modeled by Hibiki and Ishii (2000b)	277
1.3.2. Source and sink terms modeled by Fu and Ishii (2002a)	281
1.3.3. Source and sink terms modeled by Sun et al. (2004a)	290
1.4. Modeling of phase change terms in interfacial area transport equation	299
1.4.1. Active nucleation site density modeled by Kocamustafaogullari and Ishii (1983) and Hibiki and Ishii (2003b)	300
1.4.2. Bubble departure size modeled by Situ et al. (2008)	305
1.4.3. Bubble departure frequency modeled by Euh et al. (2010)	307
1.4.4. Sink term due to condensation modeled by Park et al. (2007)	307
12. Hydrodynamic Constitutive Relations for Interfacial Transfer	315
1.1. Transient forces in multiparticle system	317
1.2. Drag force in multiparticle system	323
1.2.1. Single-particle drag coefficient	324
1.2.2. Drag coefficient for dispersed two-phase flow	330
1.3. Other forces	346
1.3.1. Lift Force	346
1.3.2. Wall-lift (wall-lubrication) force	351
1.3.3. Turbulent dispersion force	352
1.4. Turbulence in multiparticle system	354
13. Drift-flux Model	361
1.1. Drift-flux model field equations	362
1.2. Drift-flux (or mixture) model constitutive laws	371
1.3. Drift-flux (or mixture) model formulation	388
1.3.1. Drift-flux model	388
1.3.2. Scaling parameters	389
1.3.3. Homogeneous flow model	393
1.3.4. Density propagation model	394
Part IV. One-dimensional model based on time average	
14. One-dimensional Drift-flux Model	397
1.1. Area average of three-dimensional drift-flux model	398

1.2. One-dimensional drift velocity	403
1.2.1. Dispersed two-phase flow	403
1.2.2. Annular two-phase Flow	414
1.2.3. Annular mist Flow	419
1.3. Covariance of convective flux	422
1.4. One-dimensional drift-flux correlations for various flow conditions	427
1.4.1. Constitutive equations for upward bubbly flow	428
1.4.2. Constitutive equations for upward adiabatic annulus and internally heated annulus	428
1.4.3. Constitutive equations for downward two-phase flow	429
1.4.4. Constitutive equations for bubbling or boiling pool systems	429
1.4.5. Constitutive equations for large diameter pipe systems	430
1.4.6. Constitutive equations at reduced gravity conditions	431
1.4.7. Constitutive equations for rod bundle geometry	434
1.4.8. Constitutive equations for pool rod bundle geometry	436
15. One-dimensional Two-fluid Model	437
1.1. Area average of three-dimensional two-fluid model	438
1.2. Special consideration for one-dimensional constitutive relations	441
1.2.1. Covariance effect in field equations	441
1.2.2. Effect of phase distribution on constitutive relations	444
1.2.3. Interfacial shear term	446
16. Two-fluid Model Considering Structural Materials in a Control Volume	449
1.1. Time-averaged two-fluid model	451
1.2. Local volume averaging operations	453
1.2.1. Definitions of parameters and averaged quantities	453
1.2.2. Some important theorems	455
1.3. Time-volume averaged two-fluid model formulation	456
1.3.1. Formulation with volume porosity only	456
1.3.2. Formulation with volume and surface porosities	461
1.4. Special consideration for time-volume averaged constitutive relations	466
1.4.1. Covariance effect in field equations	466
1.4.2. Effects of phase distribution on constitutive relations	467
1.4.3. Interfacial shear term	470
1.4.4. Relationship between surface and volume averaged quantifies	471
1.5. Appendix	472

17. One-dimensional Interfacial Area Transport Equation in Subcooled Boiling Flow	475
1.1. Formulation of interfacial area transport equation in subcooled boiling flow	476
1.2. Development of bubble layer thickness model	479
