Introduction by the authors	ix
Acknowledgments	xi
Glossary	xiii
Terminological and translation notes	xv
Reference notes	xvii
List of tables	xix
List of illustrations	xxiii
List of figures	xxvii
1 Early space science	1
Space science by balloon	3
Scientific flights into the atmosphere: the <i>Akademik</i> series	14
Scientific test flights with animals	20
The idea of a scientific Earth satellite	23
Scientific objectives of the first Earth satellites	25
Key people	25
Instead, <i>Prosteishy Sputnik</i>	27
PS 2	29
Object D: the first large scientific satellite in orbit	33
Early space science: what was learned?	37
References	39
2 Deepening our understanding	43
Following Sputnik: the MS series	43
Cosmos 5 and <i>Starfish</i> : introducing Yuri Galperin	48
Following Sputnik: Elektron	55
Elektron feast	58
Introducing the Cosmos program	64
Dnepropetrovsky Sputnik (DS)	66
DS-U series	76
Molecular oscillator in orbit	79

The great hunt for anti-matter	80
First astronomy and heliophysical missions.	84
New geomagnetic map	85
Supplementary science	86
<i>Nauka</i> modules	91
Application satellites with scientific instruments	98
The third radiation belt.	100
Intercosmos	102
Intercosmos solar missions	105
Intercosmos ionospheric missions	107
Intercosmos charged particle missions	109
<i>Ionosfernaya Stantsiya</i> and the Galperin missions	113
Proton: elusive cosmic rays	119
Specialized scientific missions: <i>Energiya</i> and <i>Efir</i>	127
Solar observatories: <i>Prognoz</i>	129
<i>Relikt</i> and <i>Intershock</i>	135
Early Soviet space science: what was learned?	139
References	140
Russian-language references	151
3 Revealing the Moon	153
First Cosmic Ship: discovery of the solar wind	153
Second Cosmic Ship: the lunar environment	157
Mapping the far side of the Moon	158
Soft-landing on the Moon.	165
Orbiting the Moon	169
Mapping the Moon in detail: <i>Luna</i> and <i>Zond</i>	173
Recovering lunar samples	181
<i>Luna 20</i> : into the lunar highlands	186
<i>Luna 24</i> : the long view	187
Roving the Moon	191
<i>Lunokhod 2</i> : along the rim of <i>Le Monnier</i>	196
Revealing the Moon: what was learned?	201
References	203
Russian-language references	209
4 Unveiling Venus	211
First Venus probes	211
At last, signals from Venus	215
Descent into the clouds.	221
At last, the surface of Venus	222
Photographing the surface	227
Strange atmosphere.	233
Chemical laboratory on the surface.	237
Mapping the surface of Venus	241

	Balloons into the atmosphere	250
	Finally, to Halley	255
	Unveiling Venus: what was learned?	258
	References	260
5	The path to Mars	263
	First Mars mission: Mars 1	265
	The orbital science missions of Mars 2 and 3	270
	Descent through Mars's atmosphere	277
	Orbital science: observations from Mars 5	281
	Meeting with Phobos	286
	Science from Phobos	290
	Phobos postscript	294
	The path to Mars: what was learned?	295
	References	297
6	Orbiting space stations	301
	Beginnings of space biology: Korabl Sputnik	301
	Space biology by cosmonauts	308
	Hitting the first walls of space biology: Cosmos 110	313
	Space biology's lunar journey: the flight of the tortoises	315
	Soyuz as a platform for space science	318
	Weightlessness: a warning	321
	Salyut orbiting station	324
	Salyut science	327
	Solo Soyuz science	330
	Salyut 3 science	331
	Salyut 4 science	332
	Salyut 5 science: materials processing plant on orbit	336
	Salyut 6 science	339
	Salyut 7 science	347
	Mir science	352
	International Space Station (ISS) science	360
	Orbiting space stations: what was learned?	365
	References	368
7	Later Soviet space science: the observatories	375
	Astronomical science: Astron, Kvant, Granat, and Gamma	375
	Great observatories: Astron	376
	Great observatories: Kvant	380
	Granat and the great annihilator	383
	The last great observatory: Gamma	389
	Integral: the great attractor	391
	Interkosmos: introducing the second phase	393
	The <i>Ellipse</i> and <i>Magik</i> missions	393

The <i>Ionozone</i> missions	397
The <i>Priroda</i> and <i>Bulgaria 1300</i> missions	402
The <i>Aktivny</i> and APEX missions	405
The <i>Oval</i> mission	409
Aureole 3	412
The search for fireballs: Prognoz M (Interball)	414
Interball: the magnetosphere remodeled	420
Atmospheric science from sounding rockets: Vertikal	424
Smaller sounding rocket programs	427
Solar science: Koronas	432
Small specialized satellites: Pion and Kompas	437
Biological science: Bion	440
Materials science: Foton	449
Later Soviet space science: what was learned?	453
References	455
Russian-language references	464
8 Perspectives, past and future	467
Decline of science during the transition	467
Spektr observatories	468
Lunar “Polygons”	471
Phobos sample return	472
Space science in the federal space plan, 2006–2015	476
Historical overview	478
The Keldysh ascendancy	480
The emergence of IKI	482
Key institutes and personalities in the space science program	486
Soviet and Russian space science in a global context	489
Concluding remarks	492
References	492
Russian-language references	494
Annexe: Summary of Soviet and Russian space science missions	495
Bibliography	503
Index	507

Russian Space Probes
Scientific Discoveries and Future Missions
Harvey, B.; Zakutnyaya, O.
2011, XXIX, 514 p., Softcover
ISBN: 978-1-4419-8149-3
